Salesforce Certified Platform App Builder Sample Questions (Q197-Q202):

NEW QUESTION # 197

Universal Containers (UC) wants to test code against a subset of production data that is under 5 GB.

Additionally, UC wants to refresh this sandbox every weekend.

Which type of sandbox should be used to accomplish this?

- A. Full Copy

- B. Partial Copy
- C. Developer
- D. Developer Pro

Answer: B

Explanation:

To test code against a subset of production data under 5 GB and to refresh the sandbox environment weekly, the most suitable type of sandbox is:

* Partial Copy (B). A Partial Copy sandbox includes a copy of your production org's metadata and a subset of your production data as defined by the sandbox template. It allows up to 5 GB of data and can be refreshed every 5 days, making it ideal for scenarios where a representative sample of production data is needed for testing without the storage and refresh limitations of a Full Copy sandbox.

Developer Pro (A) and Developer (D) sandboxes also allow for testing and development but do not include a subset of production data-they either have no data or only limited sample data. A Full Copy sandbox (C) provides a full replica of production data, far exceeding the 5 GB requirement and generally is refreshed less frequently due to larger data volume and longer copy times.
