HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample

Questions (Q51-Q56):

NEW QUESTION # 51

Which of the following is not an advantage of using Infrastructure as Code (IaC) operations?

- A. Modify a count parameter to scale resources.
- **B. Public cloud console configuration workflows.**
- C. Self-service infrastructure deployment.
- D. Troubleshoot via a Linux diff command.
- E. API-driven workflows.

Answer: B

Explanation:

* E (#Correct)-IaC aims to eliminate manual cloud console workflows by using code-based automation.

* A, B, C (#Advantages of IaC)- IaC enables self-service deployment, API-driven workflows, and dynamic resource scaling.

* D (diff command)- While useful, troubleshooting via diff is not a core advantage of IaC.

What is Infrastructure as Code?

NEW QUESTION # 52

If a DevOps team adopts AWS CloudFormation as their standardized method for provisioning public cloud resources, which of the following scenarios poses a challenge for this team?

- A. The team is asked to build a reusable code based that can deploy resources into any AWS region
- B. The team is asked to manage a new application stack built on AWS-native services
- **C. The organization decides to expand into Azure wishes to deploy new infrastructure**
- D. The DevOps team is tasked with automating a manual, web console-based provisioning.

Answer: C

Explanation:

This is the scenario that poses a challenge for this team, if they adopt AWS CloudFormation as their standardized method for provisioning public cloud resources, as CloudFormation only supports AWS services and resources, and cannot be used to provision infrastructure on other cloud platforms such as Azure.

NEW QUESTION # 53

Select the command that doesn't cause Terraform to refresh its state.

- **A. Terraform state list**
- B. Terraform apply
- C. Terraform plan
- D. Terraform destroy

Answer: A

Explanation:

This is the command that does not cause Terraform to refresh its state, as it only lists the resources that are currently managed by Terraform in the state file. The other commands will refresh the state file before performing their operations, unless you use the -refresh=false flag.

NEW QUESTION # 54

terraform apply will fail if you have not run terraform plan first to update the plan output.

- A. True
- **B. False**

Answer: B

Explanation:

Comprehensive and Detailed in-Depth Explanation:

* terraform apply can run without explicitly running terraform plan first.

* Running terraform plan before apply is recommended but not mandatory.

* If no plan file is provided, terraform apply automatically creates and executes a plan before applying changes.

NEW QUESTION # 55

What value does the Terraform Cloud private registry provide over the public Terraform Module Registry?

- **A. The ability to restrict modules to members of Terraform Cloud or Enterprise organizations**
- B. The ability to tag modules by version or release
- C. The ability to share modules publicly with any user of Terraform
- D. The ability to share modules with public Terraform users and members of Terraform Cloud Organizations

Answer: A

Explanation:

The Terraform Cloud private registry provides the ability to restrict modules to members of Terraform Cloud or Enterprise organizations. This allows you to share modules within your organization without exposing them to the public. The private registry also supports importing modules from your private VCS repositories. The public Terraform Module Registry, on the other hand, publishes modules from public Git repositories and makes them available to any user of Terraform.
