How can our 200-201 exam questions be the best exam materials in the field and always so popular among the candidates? There are two main reasons. First of all, we have a professional team of experts, each of whom has extensive experience on the 200-201 study guide. Secondly, before we write 200-201 Guide quiz, we collect a large amount of information and we will never miss any information points. Of course, we also fully consider the characteristics of the user. So we can make the best 200-201 learning questions.

Cisco 200-201 exam covers a wide range of topics, including security concepts, network security, security tools, and security policies and procedures. Candidates who pass 200-201 exam will have the skills and knowledge necessary to identify and mitigate security threats, detect and respond to security incidents, and implement effective security policies and procedures. The Cisco 200-201 Exam is designed to test the candidate's ability to apply these skills in a real-world environment.

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q94-Q99):

NEW QUESTION # 94

Which metric is used to capture the level of access needed to launch a successful attack?

- A. attack complexity
- **B. privileges required**
- C. user interaction
- D. attack vector

Answer: B

NEW QUESTION # 95

What is the difference between the rule-based detection when compared to behavioral detection?

- A. Behavioral systems are predefined patterns from hundreds of users, while Rule-Based only flags potentially abnormal patterns using signatures.
- B. Rule-Based systems have established patterns that do not change with new data, while behavioral changes.
- C. Rule-Based detection is searching for patterns linked to specific types of attacks, while behavioral is identifying per signature.
- **D. Behavioral systems find sequences that match a particular attack signature, while Rule-Based identifies potential attacks.**

Answer: D

NEW QUESTION # 96

Refer to the exhibit.

This request was sent to a web application server driven by a database. Which type of web server attack is represented?

- **A. blind SQL injection**
- B. heap memory corruption
- C. command injection
- D. parameter manipulation

Answer: A

NEW QUESTION # 97

An engineer is addressing a connectivity issue between two servers where the remote server is unable to establish a successful session. Initial checks show that the remote server is not receiving an SYN-ACK while establishing a session by sending the first SYN. What is causing this issue?

- A. incorrect UDP handshake
- **B. incorrect TCP handshake**
- C. incorrect snmp configuration
- D. incorrect OSI configuration

Answer: B

NEW QUESTION # 98

What is the difference between deep packet inspection and stateful inspection?

- A. Stateful inspection is more secure than deep packet inspection on Layer 7
- B. Stateful inspection verifies contents at Layer 4 and deep packet inspection verifies connection at Layer 7
- C. Deep packet inspection is more secure than stateful inspection on Layer 4
- **D. Deep packet inspection allows visibility on Layer 7 and stateful inspection allows visibility on Layer 4**

Answer: D
