* example-website.com: The domain name or the subdomain that is mapped to an IPv6 address.

* IN: The class of the record, which indicates that it is on the internet.

* AAAA: The type of the record, which indicates that it is an IPv6 address record.

* 2001:db8::1234: The IPv6 address that is mapped to the domain name or the subdomain. The address is written in hexadecimal notation, with colons separating each 16-bit segment. Double colons (::) can be used to compress consecutive zero segments.
