

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Learn Dumps Can Definitely Exert Positive Effect on Your Exam - RealValidExam

RealValidExam offers verified, authentic SAP C-BCBTP-2502 Real Questions and answers, which are essential for passing the SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C-BCBTP-2502). These questions and answers have been designed by Sitecore experts and can be easily downloaded on a PC, MacBook, or smartphone for comfortable and convenient learning.

SAP C-BCBTP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
Topic 2	<ul style="list-style-type: none">• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

Reliable C-BCBTP-2502 Reliable Study Guide to Obtain SAP Certification

One of the main unique qualities of the RealValidExam Google Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use SAP PDF dumps and Web-based software without installation. SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C-BCBTP-2502) PDF questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the SAP C-BCBTP-2502 exam dumps in one place for a long time.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which SAP BTP tool helps organizations manage sustainability risks and compliance?

- A. SAP Workflow Management
- B. SAP Integration Suite
- **C. SAP Sustainability Control Tower**
- D. SAP BusinessObjects

Answer: C

Explanation:

As global regulations regarding Environmental, Social, and Governance (ESG) standards become more stringent, organizations must move beyond manual reporting to automated sustainability management. SAP Sustainability Control Tower, which runs on SAP BTP, is designed specifically for this purpose. It helps organizations manage sustainability risks and compliance by providing a centralized "control center" that collects and processes ESG data from across the enterprise and its supply chain.

The tool leverages the data management and analytics capabilities of BTP (specifically SAP Datasphere and SAP Analytics Cloud) to provide a transparent view of a company's sustainability performance against its targets. It allows for the integration of non-financial data-such as carbon emissions, water usage, and labor statistics-with traditional financial data from the SAP Business Suite. This positioning is vital because it enables "holistic steering" where sustainability is treated with the same rigor as financial profitability. By using SAP Sustainability Control Tower on BTP, businesses can ensure they are meeting legal compliance requirements while also building trust with investors and customers through verified, data-driven sustainability disclosures.

NEW QUESTION # 25

Which of the following capabilities does SAP AI Core provide?

- A. Transactional data management for ERP systems.
- B. Strictly rule-based automation without AI capabilities.
- C. Hardware infrastructure for AI development.
- **D. Predictive analytics and machine learning model deployment.**

Answer: D

Explanation:

SAP AI Core is a vital service within the "Intelligent Technologies" pillar of SAP BTP, designed to handle the heavy lifting of artificial intelligence at an enterprise scale. Its primary capability is providing a standardized, highly scalable runtime for predictive analytics and machine learning (ML) model deployment. In the modern SAP Business Suite, "intelligence" is no longer just a buzzword; it is a functional requirement. SAP AI Core allows businesses to take raw data from their systems, train sophisticated models, and then deploy those models into production environments where they can serve real-time predictions.

This service is unique because it supports the full lifecycle of an AI model, including execution and monitoring. It allows developers to integrate AI features into their applications while maintaining "AI Ethics" and transparency, which are critical for enterprise compliance. Unlike standard transactional databases that focus on record-keeping, SAP AI Core focuses on "inference"-using data to generate new insights and automate complex decisions. By positioning SAP AI Core as the engine for intelligence, SAP BTP ensures that organizations can move beyond basic automation toward advanced, self-learning processes that improve over time, such as predictive maintenance in manufacturing or intelligent lead scoring in sales.

NEW QUESTION # 26

Which of the following are key products of SAP Business Technology Platform (SAP BTP)? (Choose two).

- **A. SAP Integration Suite**
- B. SAP Ariba
- C. SAP SuccessFactors
- **D. SAP HANA Cloud**

Answer: A,D

Explanation:

SAP Business Technology Platform (SAP BTP) is organized into four primary functional pillars: Database and Data Management, Analytics, Application Development and Integration, and Intelligent Technologies.

SAP HANA Cloud serves as the foundation of the Database and Data Management pillar, providing a single, integrated

powerhouse for all enterprise data. It offers the speed of in-memory processing combined with the scalability of the cloud, allowing businesses to manage large volumes of data while providing a "single source of truth." On the other hand, SAP Integration Suite is the cornerstone of the Integration pillar. It is an integration platform-as-a-service (iPaaS) that allows organizations to seamlessly connect SAP and non-SAP applications, whether they reside on-premise or in the cloud. It provides pre-built content and connectors that significantly reduce the complexity of landscape orchestration. In contrast, SAP Ariba and SAP SuccessFactors are specialized Software-as-a-Service (SaaS) applications. While they are part of the broader SAP ecosystem and often run on or integrate via BTP, they are considered line-of-business (LoB) solutions rather than core components of the technology platform itself. Understanding this distinction is vital for positioning BTP as the underlying "glue" that enables the "Intelligent Enterprise" strategy by providing the technical tools necessary to extend and integrate these LoB applications.

NEW QUESTION # 27

Which market trend is driving the adoption of SAP BTP?

- A. Reduced emphasis on business automation.
- **B. Increased need for data-driven decision-making.**
- C. Decreasing focus on API-based integrations.
- D. Declining use of cloud-based solutions.

Answer: B

Explanation:

One of the most powerful market trends driving the global adoption of SAP BTP is the increased need for data-driven decision-making. In today's hyper-competitive landscape, "gut feeling" is no longer a viable strategy for business leaders. Organizations are sitting on mountains of data, but the challenge lies in extracting actionable insights from it. SAP BTP addresses this trend by providing a unified environment where data management, analytics, and AI converge. This allows businesses to transform raw data into a strategic asset, enabling more accurate forecasting, optimized operations, and enhanced customer experiences. This trend is further accelerated by the "Digital Transformation" movement, where companies are moving away from monolithic, isolated systems toward agile, interconnected platforms. Businesses now demand real-time visibility across their entire value chain—from procurement to sales. SAP BTP's ability to integrate disparate systems and provide a "single source of truth" through SAP HANA Cloud and SAP Analytics Cloud directly addresses this market demand. As companies strive to become "Intelligent Enterprises," they rely on BTP to provide the technical infrastructure that supports continuous innovation, rapid automation, and the ability to pivot their business models based on data-driven evidence rather than historical assumptions.

NEW QUESTION # 28

Which SAP BTP component supports microservices-based application development?

- A. SAP Business Network
- **B. SAP Kyma Runtime**
- C. SAP Concur
- D. SAP SuccessFactors

Answer: B

Explanation:

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services—such as a custom loyalty engine or a unique logistics tracker—using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.
