

Free PDF Quiz 2026 HP HPE7-A08: HPE Aruba Networking Switching Professional Exam Fantastic Reliable Test Pass4sure

P.S. Free & New HPE7-A08 dumps are available on Google Drive shared by Free4Torrent: <https://drive.google.com/open?id=1gAyDOqIjmhIwS4W0off86MTfUW2jJQwL>

The passing rate of our HPE7-A08 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our HPE7-A08 practice braindumps are selected strictly based on the Real HPE7-A08 Exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them and guarantees that each answer and question is useful and valuable.

HP HPE7-A08 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Install and Configure the Wired Network Solution: This domain evaluates the abilities of Network Engineers to provision and configure HPE Aruba Networking switches both via Aruba Networking Central and command-line interface. It covers physical switch setup, Layer 2 and Layer 3 configuration and validation, multicast features, security implementations, quality of service (QoS) settings, and integration of Aruba Networking solutions into existing environments.
Topic 2	<ul style="list-style-type: none"> Manage, Maintain, Optimize, and Monitor the Wired Network Solution: This part measures the skills of Network Operations Engineers in managing and maintaining wired network infrastructures. It includes developing configuration management strategies, interpreting network operational data to make informed decisions, and programmatically auditing or configuring Aruba Networking switches to optimize performance and reliability.
Topic 3	<ul style="list-style-type: none"> Create the Implementation Plan for the Wired Network Solution: This section measures the skills of Network Designers who focus on understanding the HPE switching portfolio and selecting the right products to match various customer requirements. Candidates must also demonstrate the ability to create detailed and effective implementation plans based on given designs or customer scenarios to ensure successful wired network deployments.

Topic 4	<ul style="list-style-type: none"> • Troubleshoot the Wired Network Solution: Candidates in this section, typically Network Support Specialists, are tested on identifying common wired network failures such as IP or VLAN mismatches, hardware issues, or port misconfigurations. It also involves analyzing performance problems caused by QoS or configuration errors and formulating effective remediation plans to restore correct network operations.

HP HPE7-A08 Valid Exam Book - HPE7-A08 Guide

Many people now want to obtain the HPE7-A08 certificate. Because getting a certification can really help you prove your strength, especially in today's competitive pressure. The science and technology are very developed now. If you don't improve your soft power, you are really likely to be replaced. Our HPE7-A08 Exam Preparation can help you improve your uniqueness. And our HPE7-A08 study materials contain the most latest information not only on the content but also on the displays.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

An administrator is managing a VSX pair of AOS-CX switches. The administrator configures the following on the secondary switch:

```
secondary (config)# vlan 100
```

```
secondary (config-vlan-100) # description BBB
```

Currently VLAN 100 does not exist on the primary switch. The administrator then accesses the primary switch and configures the following:

```
Primary (config)# vlan 100
```

```
Primary (config-vlan-100) # description AAA
```

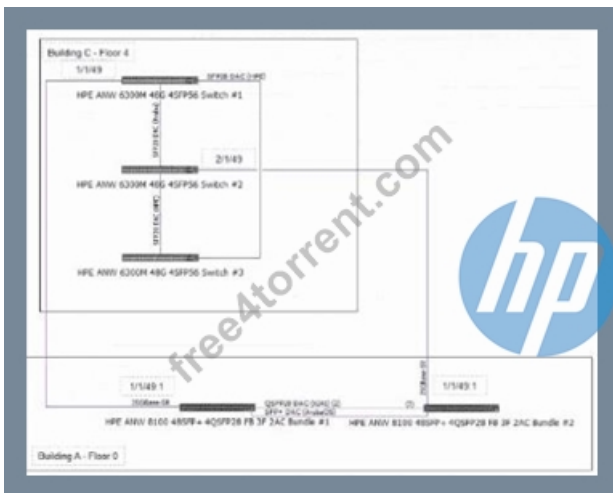

What is correct regarding the results of this configuration?

- A. Both switches will have a description of "AAA".
- B. Each switch will have a different description defined.
- C. Both switches will have a description of "BBS".
- D. An error is displayed on the primary switch regarding a mismatched parameter.

Answer: A

NEW QUESTION # 53

Refer to the exhibit:

A senior network architect has created the configuration above. You are implementing the setup in Building A and C. The actual fiber distance between the building locations is 200m/ 656ft utilizing OM4 cabling.

What needs to be changed in the configuration based on the actual environmental conditions to complete the installation and 7 other

CX 6300 VSF stack connections in the future?

- A. Replace the 25GR optics with 10SR
- B. Replace the 25GR optics with 10LR
- C. Replace the 25GR optics with 25LR
- **D. Replace the 25GR optics with 25SR**

Answer: D

Explanation:

The configuration involves connecting two buildings over fiber using OM4 cabling with a distance of 200 meters. The current optics in use are 25GR (25 Gigabit Rate) optics.

For multimode fiber such as OM4, SR (Short Reach) optics are suitable for distances up to 300 meters. In contrast, LR (Long Reach) optics are typically designed for single-mode fiber and longer distances.

Therefore, to properly support the 200m OM4 fiber link, 25SR optics should be used instead of 25GR (which are often long-reach optics).

10SR and 10LR refer to 10Gbps optics, which do not meet the 25Gbps requirement.

25LR optics are for single-mode fiber and longer distances, not multimode.

NEW QUESTION # 54

sw-1 is the master on all VRRP instances. To test the configuration, VLAN 100 was shut on sw-1, and then once the failover occurred, it was brought back up. What is the expected outcome?

- A. sw-2 will be the master for all three VRRP instances.
- B. sw-1 will only be the master for VRRP 200 and VRRP 300.
- C. sw-2 will only be the master for VRRP 200 and VRRP 300.
- **D. sw-1 will be the master for all three VRRP instances.**

Answer: D

NEW QUESTION # 55

What does it mean when an event such as the one below occurs on the HPE Aruba Networking CX switch?

2024-04-04T08:35:36.312254+00:00 ICX-Core-1 hpe-vsxd[2167]: Event[7012|LOG_INFO|AMM|1/1|VSX 2 state local down, remote up

- A. VSX secondary switch is down.
- B. VSX keepalive has detected that the primary member is down.
- C. The multichassis LAG 2 interface is down on both switches.
- **D. The physical interface of LAG 2 on the local VSX member is down.**

Answer: D

Explanation:

To interpret AOS-CX event logs correctly for the ACP-S exam, you must understand the syntax used by the VSX Daemon (hpe-vsxd) when reporting the status of Multi-Chassis Link Aggregation Groups (MC-LAGs).

* Anatomy of the Log Message:

* hpe-vsxd: This indicates the message is generated by the VSX synchronization process.

* VSX 2: This refers specifically to Virtual Port Channel (or VSX LAG) ID 2. It does not refer to the switch member ID, but the logical LAG ID.

* State local down: This means the physical member ports assigned to LAG 2 on the switch you are currently logged into (the "local" switch) are operationally down.

* remote up: This indicates that via the Inter-Switch Link (ISL), the switch has learned that its VSX peer (the "remote" switch) still has its physical member ports for LAG 2 in an "up" state.

* Operational Impact: In a healthy VSX environment, an MC-LAG should ideally show "local up, remote up." When a log shows "local down, remote up," it signifies a partial failure of the multi-chassis aggregation. Traffic destined for the device connected to

LAG 2 will now only flow through the peer switch.

* Why other options are incorrect:

* Option A: If the secondary switch were down entirely, the "remote" status would typically be reported as "down" or "unknown" because the ISL/Keepalive synchronization would be lost.

* Option B: If it were down on both, the log would read "local down, remote down."

* Option D: Keepalive failures are reported with different Event IDs (typically involving the "keepalive" keyword) and affect the overall VSX role state (Split-Brain recovery), not a specific LAG ID.

Key Practice Tip: Always look for the keywords local and remote in VSX logs. They provide an immediate health snapshot of the synchronized state between the two core switches.

NEW QUESTION # 56

Which two Aruba Central features help in provisioning and managing switches at scale? (Select two)

- A. Smart Rate Ports
- B. Template Groups
- C. Configuration Snippets
- D. Network Analytics Engine (NAE)

Answer: B,C

Explanation:

Template Groups standardize configurations across multiple switches, while Configuration Snippets allow modular changes, enabling scalable and efficient provisioning.

NEW QUESTION # 57

.....

The HP HPE7-A08 certification exam helps you in getting jobs easily. Free4Torrent offers real HPE7-A08 exam questions so that the students can prepare in a short time and crack the HPE7-A08 exam with ease. These HPE7-A08 Exam Questions are collected by professionals by working hard for days and nights so that the customers can pass HPE7-A08 certification exam with good scores.
