Cert Salesforce CRT-450 Exam | CRT-450 Positive Feedback

Getting tired of humdrum life, you may want to get some successful feeling or try something different instead. We all know that is of important to pass the CRT-450 exam and get the CRT-450 certification for someone who wants to find a good job in internet area, and it is not a simple thing to prepare for exam. So you are in the right place now. The CRT-450 practice materials are a great beginning to prepare your exam. Actually, just think of our CRT-450 practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

Salesforce Certified Platform Developer I Sample Questions (Q222-Q227):

NEW QUESTION # 222

A developer created these three roll-up summary fields on the custom object. Project_c:

The developer is asked to create a new field that should be the ratio between rejected and approved timesheet for a given project. What are two benefits of choosing a formula field instead of an Apex trigger to fulfill the request? Choose 2 answers

- A. Using a formula field reduces maintenance overhead.
- B. A formula field will trigger existing automation when deployed.
- C. A test class will validate the formula field during deployment.
- D. A formula field will calculate the retroactively for existing records

Answer: B,D

NEW QUESTION # 223

While developing an Apex class with custom search functionality that will be launched from a Lightning Web Component, how can the developer ensure only records accessible to the currently logged in user are displayed?

- A. Use the without sharing keyword.
- B. Use the WITH SECURITY_ENFORCED clause within the SOQL.
- C. Use the with sharing keyword.
- D. Use the inherited sharing keyword.

Answer: C

Explanation:

To ensure that only records accessible to the currently logged-in user are displayed when developing an Apex class for custom search functionality launched from a Lightning Web Component (LWC), the developer should use the with sharing keyword.

with sharing Keyword: This keyword enforces the sharing rules of the current user, ensuring that the Apex class respects the user's record-level access permissions. When an Apex class is declared with with sharing, it enforces sharing rules, meaning users can only access records they have permission to see.

"Use the with sharing keyword when declaring a class to enforce the sharing rules that apply to the current user."

- Apex Developer Guide: Using the with sharing or without sharing Keywords Importance in LWCs: Lightning Web Components invoke Apex methods annotated with @AuraEnabled, which execute in system context by default. Without specifying sharing, these methods can access all records, potentially exposing data that the user shouldn't see.

"By default, Apex code runs in system context; that is, the current user's permissions and field-level security do not apply."

- Apex Developer Guide: Enforcing Sharing Rules

Why Not inherited sharing: While inherited sharing allows an Apex class to run in the sharing context of the caller, in this scenario, since the LWC does not have an inherent sharing context, using with sharing explicitly ensures sharing rules are enforced.

WITH SECURITY_ENFORCED Clause: This SOQL clause enforces field-level security (FLS) and object-level security (OLS), not record-level sharing rules. Therefore, it does not restrict records based on the user's sharing settings.

"The WITH SECURITY_ENFORCED clause applies object-level and field-level security checks to SOQL queries to ensure that users don't see fields or objects they don't have access to."

- SOQL and SOSL Reference: WITH SECURITY_ENFORCED Clause

Conclusion: By declaring the Apex class with with sharing, the developer ensures that only records the user has access to are returned, aligning with the requirement.

NEW QUESTION # 224

A developer must create a ShippingCalculator class that cannot be instantiated and must include a working default implementation of a calculate method, that sub-classes can override.

What is the correct implementation of the ShippingCalculator class?

- A.
- B.
- C.
- D.

Answer: D

NEW QUESTION # 225

A custom object Trainer_c has a lookup field to another custom object Gym__c. Which SOQL query will get the record for the Viridian City gym and its trainers?

- A. SELECT ID FROM Trainer_c WHERE Gym__r.Name = 'Viridian City Gym'
- B. SELECT Id, (SELECT Id FROM Trainers) FROM Gym__C WHERE Name = 'Viridian City Gym'
- C. SELECT Id, (SELECT Id FROM Trainer_c) FROM Gym__c WHERE Name = 'Viridian City Gym'
- D. SELECT ID, (SELECT Id FROM Trainers) FROM Gym__C WHERE Name = 'Viridian City Gym'

Answer: C

Explanation:

This SOQL query will get the record for the Viridian City gym and its trainers by using a subquery to fetch the related records from the Trainer_c object. The subquery uses the relationship name Trainer_c, which is the plural form of the custom object name with a suffix of __c. The main query uses the Name field of the Gym__c object to filter by the gym name. The query also uses the correct syntax for SOQL, which requires the use of the equal sign (=) for comparison operators, and single quotes (') for string literals.

NEW QUESTION # 226

What is an accurate statement about variable scope? (Choose 3)

- A. Parallel blocks can use the same variable name.
- B. A static variable can restrict the scope to the current block if its value is null.
- C. Sub-blocks can reuse a parent block's variable name if its value is null.
- D. Sub-blocks cannot reuse a parent block's variable name.
- E. A variable can be defined at any point in a block.

Answer: A,D,E

NEW QUESTION # 227
