## Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Which FortiSASE feature ensures least-privileged user access to all applications?

- A. zero trust network access (ZTNA)
- B. thin branch SASE extension
- C. secure web gateway (SWG)
- D. SD-WAN

**Answer: A**

Explanation:

Zero Trust Network Access (ZTNA) is the FortiSASE feature that ensures least-privileged user access to all applications. ZTNA operates on the principle of "never trust, always verify," providing secure access based on the identity of users and devices, regardless of their location.

Zero Trust Network Access (ZTNA):

ZTNA ensures that only authenticated and authorized users and devices can access applications.

It applies the principle of least privilege by granting access only to the resources required by the user, minimizing the potential for unauthorized access.

Implementation:

ZTNA continuously verifies user and device trustworthiness and enforces granular access control policies.

This approach enhances security by reducing the attack surface and limiting lateral movement within the network.

Reference:

FortiOS 7.2 Administration Guide: Provides detailed information on ZTNA and its role in ensuring least-privileged access.

FortiSASE 23.2 Documentation: Explains the implementation and benefits of ZTNA within the FortiSASE environment.
