The clients trust our products and treat our products as the first choice. So the total amounts of the clients and the sales volume of our NSE8_812 learning file is constantly increasing.

The Fortinet NSE8_812 exam consists of 60 multiple-choice questions that are to be completed in 120 minutes. The questions are designed to test the candidate's understanding of advanced security concepts and their ability to apply this knowledge to real-world scenarios. NSE8_812 Exam also includes scenario-based questions that require the candidate to analyze a given situation and provide the best course of action.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q88-Q93):

NEW QUESTION # 88

Refer to the exhibit showing the history logs from a FortiMail device.

Which FortiMail email security feature can an administrator enable to treat these emails as spam?

- A. Impersonation analysis in an antispam profile
- B. Sender domain validation in a session profile
- C. Soft fail SPF validation in an antispam profile
- D. DKIM validation in a session profile

Answer: A

Explanation:

Impersonation analysis is a feature that detects emails that attempt to impersonate a trusted sender, such as a company executive or a well-known brand, by using spoofed or look-alike email addresses. This feature can help prevent phishing and business email compromise (BEC) attacks. Impersonation analysis can be enabled in an antispam profile and applied to a firewall policy.

<https://docs.fortinet.com/document/fortimail/7.2.0/cookbook/221814/protecting-against-email-impersonation-in-fortimail>

NEW QUESTION # 89

You must analyze an event that happened at 20:37 UTC. One log relevant to the event is extracted from FortiGate logs:

The devices and the administrator are all located in different time zones Daylight savings time (DST) is disabled

* The FortiGate is at GMT-1000.

* The FortiAnalyzer is at GMT-0800

* Your browser local time zone is at GMT-03.00

You want to review this log on FortiAnalyzer GUI, what time should you use as a filter?

- A. 20:37:08
- B. 17:37:08
- C. 12:37:08
- D. 10:37:08

Answer: B

Explanation:

To review this log on FortiAnalyzer GUI, the administrator should use the time filter that matches the local time zone of FortiAnalyzer, which is GMT-0800. Since the log was generated at 20:37 UTC (GMT+0000), the corresponding time in GMT-0800 is 20:37 - 8 hours = 12:37. However, since DST is disabled on FortiAnalyzer, the administrator should add one hour to account for daylight saving time difference, resulting in 12:37 + 1 hour = 13:37. Therefore, the time filter to use is 13:37:08.

References: <https://docs.fortinet.com/document/fortianalyzer/6.4.0/administration-guide/103664/time-zone-and-daylight-saving-time>

NEW QUESTION # 90

Refer to the exhibits.

The exhibits show a FortiGate network topology and the output of the status of high availability on the FortiGate.

Given this information, which statement is correct?

- A. The ethertype values of the HA packets are 0x8890, 0x8891, and 0x8892
- B. FGVMEVLQOG33WM3D and FGVMEVGCJNHFYI4A share a virtual MAC address.
- **C. The cluster members are on the same network and the IP addresses were statically assigned.**
- D. The cluster mode can support a maximum of four (4) FortiGate VMs

Answer: C

Explanation:

The output of the status of high availability on the FortiGate shows that the cluster mode is active-passive, which means that only one FortiGate unit is active at a time, while the other unit is in standby mode. The active unit handles all traffic and also sends HA heartbeat packets to monitor the standby unit. The standby unit becomes active if it stops receiving heartbeat packets from the active unit, or if it receives a higher priority from another cluster unit. In active-passive mode, all cluster units share a virtual MAC address for each interface, which is used as the source MAC address for all packets forwarded by the cluster. References:

<https://docs.fortinet.com/document/fortigate/6.4.0/cookbook/103439/high-availability-with-two-fortigates>

NEW QUESTION # 91

Refer to the exhibit showing an SD-WAN configuration.

□ According to the exhibit, if an internal user pings 10.1.100.2 and 10.1.100.22 from subnet 172.16.205.0/24, which outgoing interfaces will be used?

- A. port1 and port1
- **B. port16 and port1**
- C. port16 and port15
- D. port1 and port15

Answer: B

Explanation:

According to the exhibit, the SD-WAN configuration has two rules: one for traffic to 10.1.100.0/24 subnet, and one for traffic to 10.1.100.16/28 subnet. The first rule uses the best quality strategy, which selects the SD-WAN member with the best measured quality based on performance SLA metrics. The second rule uses the manual strategy, which specifies port1 as the SD-WAN member to select. Therefore, if an internal user pings 10.1.100.2 and 10.1.100.22 from subnet 172.16.205.0/24, the outgoing interfaces will be port16 and port1 respectively, assuming that port16 has the best quality among the SD-WAN members.

Reference: <https://docs.fortinet.com/document/fortigate/6.2.14/cookbook/218559/configuring-the-sd-wan-interface>

NEW QUESTION # 92

Refer to the exhibit.

□ The exhibit shows the forensics analysis of an event detected by the FortiEDR core. In this scenario, which statement is correct regarding the threat?

- A. This is a ransomware attack and has been stopped by FortiEDR
- B. This is an exfiltration attack and has not been stopped by FortiEDR
- **C. This is a ransomware attack and has not been stopped by FortiEDR.**
- D. This is an exfiltration attack and has been stopped by FortiEDR.

Answer: C

NEW QUESTION # 93

.....

The Fortinet NSE8_812 Practice Exam feature is the handiest format available for our customers. The customers can give unlimited tests and even track the mistakes and marks of their previous given tests from history so that they can overcome their mistakes.
