C-ABAPD-2507 Reliable Test Objectives, Test C-ABAPD-2507 Tutorials

Sharp tools make good work. Our C-ABAPD-2507 study quiz is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased our C-ABAPD-2507 preparation questions have successfully passed the exam. And it is hard to find in the market. The pass rate is the test of a material. Such a high pass rate is sufficient to prove that C-ABAPD-2507 Guide materials has a high quality.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q40-Q45):

NEW QUESTION # 40

In ABAP SQL, which of the following retrieves the association field `_Airline-Name` of a CDS view?

- A. `*_Airline-Name`
- B. `/_Airline-Name`
- C. `_Airline-Name`
- D. `@_Airline-Name`

Answer: D

NEW QUESTION # 41

What are some features of the current ABAP programming language? (Select 2)

- A. A data object's type can change at runtime.
- B. **The code is expression-based.**
- C. Keywords are case-sensitive.
- D. **It has built-in database access.**

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

* ABAP for Cloud Development emphasizes expression-oriented, typed programming with strong static checks (e.g., constructor/operators, REDUCE, COND, etc.), which is the modern ABAP style used in RAP.

* ABAP integrates built-in database access tightly via CDS and Open SQL; CDS entities are the building blocks and govern data access that the runtime executes via the SQL view.

* (A) is false (ABAP is statically typed). (B) is false (ABAP keywords are not case-sensitive).

NEW QUESTION # 42

In a subclass `sub1`, you want to redefine a component of a superclass `super1`.

How do you achieve this?

Note: There are 2 correct answers to this question.

- A. You implement the redefined component for a second time in `super1`.
- B. You add the clause REDEFINITION to the component in `super1`.
- C. **You add the clause REDEFINITION to the component in `sub1`.**
- D. **You implement the redefined component in `sub1`.**

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To redefine a component in a subclass:

* The component (method) in the superclass must be defined with the FOR REDEFINITION addition.

* In the subclass, you use the REDEFINITION clause in the method declaration and implement the method in the subclass to override the superclass behavior.

Thus:

* Option A is correct because the method declaration in `sub1` must include the REDEFINITION addition.

* Option D is correct because the actual redefined method implementation must be provided in the subclass `sub1`.

* Option B is incorrect because the component is not re-implemented in the superclass.

* Option C is incorrect because REDEFINITION is not added in the superclass, but FOR REDEFINITION is.

Reference: SAP Help 2, section on object-oriented ABAP programming with class-based components and redefinitions in inheritance structures.

NEW QUESTION # 43

What is a class defined as part of an ABAP program called?

- A. Local variable
- **B. Local class**
- C. Global variable
- D. Global class

Answer: B

NEW QUESTION # 44

Which of the following Core Data Services built-in functions returns a result of type INTT4? Note: There are 2 correct answers to this question.

- **A. dats_is_valid**
- **B. dats_days_between**
- C. dats_add_days
- D. dats_add_months

Answer: A,B

NEW QUESTION # 45

.....
