100% Pass 500-220 - Valid Reliable Engineering Cisco Meraki Solutions Test Blueprint

To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our 500-220 exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our 500-220 Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

Cisco Engineering Cisco Meraki Solutions Sample Questions (Q53-Q58):

NEW QUESTION # 53

Air Marshal has contained a malicious SSID.

What are two effects on connectivity? (Choose two.)

- **A. New clients cannot connect.**
- B. Currently associated clients stay connected.
- C. New clients can connect.
- D. Currently associated clients are affected by restrictive traffic shaping rules.
- **E. Currently associated clients are disconnected.**

Answer: A,E

NEW QUESTION # 54

Which three verbs of request are available in the Cisco Meraki API? (Choose three.)

- A. SET
- B. POST
- C. PATCH
- D. GET
- E. ADD
- F. PUT

Answer: B,D,F

Explanation:

Explanation

Verbs in the API follow the usual REST conventions:

GET returns the value of a resource or a list of resources, depending on whether an identifier is specified.

POST adds a new resource

PUT updates a resource

DELETE removes a resource

NEW QUESTION # 55

Which design requirement is met by implementing syslog versus SNMP?

- A. when information such as flows and client connectivity must be gathered
- B. when automation capabilities are needed
- C. when proactive alerts for critical events must be generated
- D. when organization-wide information must be collected

Answer: A

Explanation:

Explanation

Implementing syslog versus SNMP can meet the design requirement of gathering information such as flows and client connectivity.

Syslog can collect and report various types of events, such as VPN connectivity, uplink connectivity, DHCP leases, firewall rules, IDS alerts, and security events. Syslog can also provide detailed information about the flows and client connectivity on the network devices, such as source and destination IP addresses, ports, protocols, bytes transferred, etc. SNMP, on the other hand, can collect and report various statistics and information about the network devices, such as CPU utilization, interface status, memory usage, etc. However, SNMP does not provide as much information about the flows and client connectivity as syslog does.

NEW QUESTION # 56

Which two features and functions are supported when using an MX appliance in Passthrough mode? (Choose two.)

- A. DHCP
- B. high availability
- C. intrusion prevention
- D. site-to-site VPN
- E. secondary uplinks

Answer: C,D

Explanation:

Explanation

These are the two features and functions that are supported when using an MX appliance in Passthrough mode.

According to the [MX Addressing and VLANs] article, Passthrough mode allows the MX appliance to act as a layer 2 bridge, passing traffic between its LAN and WAN ports without performing any routing or address translation. However, some features such as intrusion prevention and site-to-site VPN are still available in this mode.

NEW QUESTION # 57

A Cisco Meraki MV camera is monitoring an office and its field of vision currently captures work desks and employee computer screens. However, recording employee computer screens is prohibited by local regulation.

Which feature in Dashboard can be used to preserve the current position of the camera while also meeting regulation requirements?

- A. sensor crop
- B. area of interest
- C. privacy window
- D. restricted mode
- E. zone exclusion

Answer: C
