AD0-E725시험패스 인증덤프문제 - AD0-E725유효한 시험덤프

수많은 Adobe인증 AD0-E725시험공부자료중에서Fast2test의Adobe인증 AD0-E725덤프가 가장 출중한 원인은 무엇 일가요? Fast2test의Adobe인증 AD0-E725덤프는 실제시험문제의 출제방향을 연구하여 IT전문가로 되어있는 덤프제작팀이 만든 최신버전 덤프입니다. Fast2test의Adobe인증 AD0-E725덤프가 있으면 힘든Adobe인증 AD0-E725시험이 쉬어져서 자격증을 제일 빠른 시간내에 취득할 수 있습니다.제일 어려운 시험을 제일 간단한 방법으로 패스하는 방법은Fast2test의Adobe인증 AD0-E725덤프로 시험준비 공부를 하는것입니다.

Adobe AD0-E725 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
주제 2	<ul style="list-style-type: none"> External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I O events and webhooks to create automated and connected business processes.

주제 3	<ul style="list-style-type: none"> • Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
주제 4	<ul style="list-style-type: none"> • Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.

최신 Adobe Commerce AD0-E725 무료샘플문제 (Q33-Q38):

질문 # 33

An Adobe Commerce Developer creates a before plugin for the save() method from the Magento\Framework\App\Cache\Proxy class to manipulate cache identifiers and data before it is saved to the cache storage.

An example of the class code is shown below:

```
namespace Magento\Framework\App\Cache;
use Magento\Framework\App\Cache\CacheInterface;
use Magento\Framework\ObjectManager\NoninterceptableInterface;
class Proxy implements
CacheInterface,
NoninterceptableInterface
{
...
public function save($data, $identifier, $tags = [], $lifeTime = null)
{
return $this->getCache()->save($data, $identifier, $tags, $lifeTime);
}
...
}
```

Why is the plugin not working as expected?

- A. The plugin cannot be created for this class.
- B. An after plugin defined for the same function affects the results.
- C. An around plugin defined for the same function prevents the execution.

정답: A

설명:

Comprehensive and Detailed Explanation (with official references):

The correct answer is A. The plugin cannot be created for this class.

The reason is that Magento\Framework\App\Cache\Proxy implements the NoninterceptableInterface.

* Any class that implements the NoninterceptableInterface in Magento is excluded from the plugin system

* This means no before, after, or around plugins can be applied to methods of such classes.

* Magento uses this mechanism to protect critical classes (like Proxy classes, Factories, and other infrastructure code) from being intercepted, as doing so could introduce performance or stability issues.

Therefore, the developer's plugin for the save() method does not work, because plugins are not allowed on this class by design.

Options B and C are incorrect because:

* Another plugin (after/around) does not block the execution in this case; the class itself is simply non- interceptable.

Official Documentation Extracts:

* "Plugins cannot be applied to final classes, final methods, non-public methods, or classes that implement Magento\Framework\ObjectManager\NoninterceptableInterface."- Adobe Commerce DevDocs: Plugins limitations

* "Classes implementing NoninterceptableInterface cannot be intercepted. This interface is used to mark classes that must not be extended through the plugin mechanism"- Magento Framework Reference:

NoninterceptableInterface

질문 # 34

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- A. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- B. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.
- C. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.

정답: C

설명:

In Adobe Commerce Cloud Pro Production, logs are spread across multiple nodes, so manually checking each node (A) is inefficient. The correct approach is to use New Relic Log Management, which aggregates logs from all services and nodes. This allows developers to quickly analyze application logs, infrastructure logs, CDN, and WAF errors in one place.

A is inefficient and not recommended.

C only shows deployment logs, not ongoing runtime errors.

B is correct: New Relic Log Management is the single source of truth for performance and error analysis.

Adobe Commerce Cloud DevDocs - Log management with New Relic

질문 # 35

A Developer is tasked with creating a new index. The custom indexer is not automatically updating the product data.

How should the Developer solve this issue?

- A. Use an event observer to monitor data changes.
- B. Use the mview to allow tracking database changes.
- C. Implement custom database triggers.

정답: B

질문 # 36

A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a missed status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs.

Which option should the Developer use to ensure the cron jobs consistently run each day?

- A. Set the cron jobs to run multiple times per day instead of once daily.
- B. In the execute() function, implement a lock checker to make sure the cron runs alone.
- C. Implement a custom group for the cron jobs in the crontab.xml.

정답: C

설명:

The correct solution is to create a custom cron group.

By default, Magento cron jobs run in shared groups (default, index, etc.). If a heavy/long-running job blocks the queue, other jobs in the same group may become delayed or marked as "missed." By assigning heavy processes (such as stock imports) to a dedicated group, developers ensure that the job is managed separately, avoiding conflicts.

Option B does not solve the root scheduling issue; it just increases runs.

Option C (lock checker) prevents overlaps but does not prevent the missed status caused by shared cron queue congestion.

Reference:

Adobe Commerce DevDocs - Configure cron groups

질문 # 37

A Developer is writing an integration test. The functionality being tested has many admin area configurations that need to be tested.

Which DocBlock annotation should be used to allow configuration settings to be manipulated for testing purposes?

- A. @testConfigFixture
- B. @testAdminConfigFixture
- C. @testAdminArea

정답: A

설명:

The correct annotation is @testConfigFixture. It allows developers to set or override configuration values during tests.

A does not exist.

B does not exist.

C is correct: @testConfigFixture provides a way to programmatically adjust admin configurations for the scope of the test.
