

2026 High Pass-Rate NCP-DB-6.10 Exam Discount Voucher | NCP-DB-6.10 100% Free Valid Test Format

We understand your enthusiasm of effective practice materials, because they are the most hopeful tools help us gain more knowledge with the least time to achieve success, and we have been in your shoes. Our NCP-DB-6.10 exam questions can help you achieve that dreams easily. Whatever you want to master about this exam, our experts have compiled into them for your reference. A growing number of exam candidates are choosing our NCP-DB-6.10 Exam Questions, why are you still hesitating? As long as you have make up your mind, our Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 study question is available in five minutes, so just begin your review now! This could be a pinnacle in your life.

We all know that Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps are an important section of the NCP-DB-6.10 exam that is purely based on your skills, expertise, and knowledge. So, we must find quality NCP-DB-6.10 Questions that are drafted by industry experts who have complete knowledge regarding the NCP-DB-6.10 Certification Exam and can share the same with those who want to clear the NCP-DB-6.10 exam. The best approach to finding Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps is to check the CramPDF that is offering the NCP-DB-6.10 practice questions.

Nutanix NCP-DB-6.10 Accurate Questions and Answers

Nutanix certification NCP-DB-6.10 exam is a rare examination opportunity to improve yourself and it is very valuable in the IT field. There are many IT professionals to participate in this exam. Passing Nutanix certification NCP-DB-6.10 exam can improve your IT skills. Our CramPDF provide you practice questions about Nutanix Certification NCP-DB-6.10 Exam. CramPDF's professional IT team will provide you with the latest training tools to help you realize their dreams earlier. CramPDF have the best quality and the latest Nutanix certification NCP-DB-6.10 exam training materials and they can help you pass the Nutanix certification NCP-DB-6.10 exam successfully.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q260-Q265):

NEW QUESTION # 260

A user accidentally drops a table in the database at 10:42pm and the NDB administrator is tasked with restoring the table. The snapshot schedule is set for every 30 minutes and the log catchup is set for every 15 minutes.

The last available snapshot is at 10:30pm.

What is the optimal path to restore the table back with minimum data loss?

- A. Restore using point in time till 10:41pm
- **B. Restore using point in time till 10:42pm.**
- C. Restore the 10:30pm snapshot.

- D. Restore the 10:42pm snapshot.

Answer: B

Explanation:

The optimal path to restore the table back with minimum data loss is to use the point in time restore feature of NDB, which allows the administrator to restore the database to a specific point in time based on the available snapshots and logs. By restoring using point in time till 10:42pm, the administrator can recover the table just before it was dropped by the user, and minimize the data loss to the least possible amount. The other options are not optimal, as they either involve restoring an older snapshot, which may result in more data loss, or restoring a non-existent snapshot, which is not possible.

NEW QUESTION # 261

An administrator needs to provision a PostgreSQL cluster instance with an external Load Balancer. Which software can be omitted on the Reference: VM while creating the Software Profile?

- A. etcd
- B. Patron
- C. HAProxy
- D. keepalived

Answer: C

Explanation:

When provisioning a PostgreSQL cluster instance with an external load balancer in NDB, the administrator creates a software profile from a Reference: VM. The Reference: VM typically includes software like Patroni (for HA management), HAProxy (for internal load balancing), keepalived (for high availability IP management), and etcd (for distributed configuration). Since an external load balancer is used, the internal HAProxy can be omitted from the Reference: VM.

NDB will rely on the external load balancer to distribute traffic, eliminating the need for HAProxy in the software profile, while the other components remain essential for cluster management.

NEW QUESTION # 262

An administrator is interested in using profiles to simplify the database provisioning process. The profile needs to include information related to the SQL service startup account, and the NDB worker service account.

Which profile would help the administrator accomplish this task?

- A. Software
- B. Windows Domain
- C. Database Parameter
- D. Network

Answer: B

Explanation:

The correct answer is B because the Windows Domain profile is the profile that includes information related to the SQL service startup account and the NDB worker service account. A Windows Domain profile is a collection of settings that define how NDB manages Windows-based database servers and databases. It contains the following information:

The domain name and credentials to join the database server VMs to the domain
The SQL service startup account and password to run the SQL Server service on the database server VMs
The NDB worker service account and password to run the NDB Database Agent service on the database server VMs
The SQL Server authentication mode to use for the databases
By using a Windows Domain profile, the administrator can simplify the database provisioning process by applying the same settings to multiple database server VMs and databases, without having to manually enter them each time. The other options are not correct because they describe different types of profiles that do not include information related to the SQL service startup account and the NDB worker service account.

NEW QUESTION # 263

What is required to create an NDB Software Profile?

- A. Database server VM registered with NDB

- B. Patch file for the installed databases
- **C. Installer package for database software**
- D. OS image registered with Prism Element

Answer: C

Explanation:

An NDB Software Profile is a template of the OS and database engine that you can use to provision or clone database server VMs using NDB. To create a software profile, you need to upload an installer package for the database software that you want to use, such as SQL Server or Oracle. The installer package must be compatible with the OS image that you have registered with Prism Element. You do not need a database server VM registered with NDB, a patch file for the installed databases, or an OS image registered with Prism Element to create a software profile. Those are required for other tasks, such as creating a software profile version, registering a database server VM, or provisioning a database server VM.

NEW QUESTION # 264

How is a software profile created?

- **A. In the Era CLI select Profiles Software, and then a database engine, OS version, and database version,**
- B. Clone a software profile provided by Era and modify as needed.
- C. In the Era CLI select Profiles Software, and then a template VM.
- D. Create a software profile from a registered Database Server VM.

Answer: A

Explanation:

Nutanix Database Automation (NCP-DB) simplifies database provisioning using predefined profiles customized to your environment. Software profiles, which are templates of the OS and database engine, allow you to maintain consistent software versions. You then use additional profiles to customize that deployment.

NEW QUESTION # 265

.....

For most people who have no much time to prepare the Nutanix real exam, latest NCP-DB-6.10 exam questions will be your excellent partner to help you get high passing score in the valid test. Once you receive our NCP-DB-6.10 Dumps Torrent, it will just need one or two days to practice test questions and answers. If you finished it well, clearing exam will be easy.
