Purchase the SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite (C_ACDET_2506) practice tests today and get these amazing offers.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q48-Q53):

NEW QUESTION # 48

While working on a customer project, the customer asks if specific details can be captured and made available in reporting for a sourcing project or contract that doesn't fit the standard fields. What is the recommended way to handle this scenario?

- A. Configure as many custom fields as possible for data capture purposes.
- B. Create a dynamic form (dform) where common data can be synced with the project header through customization.
- C. Create a Microsoft Form from the Actions menu for managing all the requirements.
- D. Suggest the customer put a Word document on the template and capture all information in that document.

Answer: A

Explanation:

The recommended approach is to configure custom fields for capturing non-standard data in sourcing projects or contracts. Custom fields allow structured data capture directly within SAP Ariba, which can then be fully included in reporting and analytics. Documents like Word files (A) are unstructured and not reportable. Dynamic forms synced with project headers (B) are not supported as standard functionality. External tools like Microsoft Forms (C) do not integrate with SAP Ariba's reporting capabilities. Custom fields can include picklists, validation rules, translations, and help tips, enabling flexible, maintainable data collection aligned with reporting and compliance needs.

NEW QUESTION # 49

How can you make the attributes of a Flex Master Data field reportable?

- A. Create a custom reportable field and use a defaulting expression to set the value of the Flex Master Data attribute
- B. When the Flex Master Data Template is created, the attributes can be marked as reportable or not.
- C. Flex Master Data objects and their attributes cannot be made reportable
- D. Flex Master Data objects automatically include all attributes as reportable without any additional configuration.

Answer: B

NEW QUESTION # 50

Which document must be returned to SAP before a Deployment Lead can be assigned to the project?

- A. Deployment Overview
- B. Delivery Engagement Readiness Checklist
- C. Solution Design Matrix
- D. Enablement Workbook

Answer: B

Explanation:

The Delivery Engagement Readiness Checklist is a critical gatekeeper document that confirms all prerequisites and readiness criteria have been met before SAP assigns a Deployment Lead to a project. This checklist ensures project scope, resourcing, access, and other foundational elements are in place to proceed.

Other documents like Deployment Overview and Enablement Workbook are informative or internal project management tools but do not formally trigger Deployment Lead assignment. The Solution Design Matrix is a design artifact and not a staffing gating document.

This process supports structured project governance and resource allocation within SAP.

NEW QUESTION # 51

When you have created a new custom field and marked it as reportable, saved and published your changes, but the field does not show up in reports. How can you resolve the issue?

- A. Run the "Retrieve flexible fields metadata for reporting" task under Reporting Manager.
- B. You did not assign the custom field to the appropriate report category.
- C. Custom fields must be created in the same module where reports are generated.
- D. Wait 2 hours for the schema to refresh automatically.

Answer: A

Explanation:

After publishing a custom reportable field, the "Retrieve flexible fields metadata for reporting" task must be run to update the reporting schema with the new field metadata. Without this manual step, the reports do not recognize the new field despite it being published. The system does not perform automatic timed refreshes of the schema. Module location or report category assignment is not a prerequisite for report visibility in SAP Ariba's analytics.

NEW QUESTION # 52

During the configuration of a new custom field, after it's been saved but before the field has been published, you realize that you set the wrong field type. What is the next step you should take to resolve the issue?

- A. Clear and recreate the field with the same field name and the intended field type
- **B. Delete the field and create a new field with the same name and the intended field type**
- C. Mark the field as Hidden, and create a new field with a slightly different name and the intended field type
- D. Change the field type by selecting the intended type in the dropdown and Save

Answer: B

Explanation:

Once a custom field has been saved, its field type cannot be changed—even if the field has not yet been published. The correct approach is to delete the incorrect field and create a new one with the intended type, optionally using the same name to maintain naming consistency. Clearing or hiding the field does not solve the issue, and the system does not allow type changes via the UI once saved. This approach is standard in SAP Ariba field management to avoid data integrity issues.

NEW QUESTION # 53

.....

The TestsDumps is one of the top-rated and renowned platforms that have been offering real and valid SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite (C_ACDET_2506) practice test questions for many years.
