

JN0-224 New Dumps Sheet | JN0-224 Online Bootcamps

We are living in a good society; everything is changing so fast with the development of technology. So an ambitious person must be able to realize his dreams if he is willing to make efforts. Winners always know the harder they work the luckier they are. Our JN0-224 practice materials are prepared for the diligent people craving for success. Almost all people pursue a promising career, the reality is not everyone acts quickly and persistently. That is the reason why success belongs to few people.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	• Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 2	• Python • PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 3	• Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 4	• NETCONF • XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

- Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.

2026 JN0-224 New Dumps Sheet | Reliable JN0-224 Online Bootcamps: Automation and DevOps, Associate (JNCIA-DevOps) 100% Pass

We have strong technical and research capabilities on this career for the reason that we have a professional and specialized expert team devoting themselves on the compiling the latest and most precise JN0-224 exam materials. All questions and answers of JN0-224 learning guide are tested by professionals who have passed the JN0-224 Exam. All the experts we hired have been engaged in professional qualification exams for many years. The hit rate for JN0-224 exam torrent is as high as 99%. You will pass the JN0-224 exam for sure with our JN0-224 exam questions.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which two statements are valid regarding Junos automation? (Choose two.)

- A. The jsd process handles XML API calls.
- B. The mod process handles XML API calls.
- C. The mgd process handles JET API requests.
- D. The jsd process handles JET API requests.

Answer: A,D

Explanation:

In Junos automation, several processes handle API requests, and understanding which process handles what is crucial:

jsd Process:

XML API Calls (A): The jsd process is responsible for handling XML API calls, which are a significant part of Junos automation. XML API allows for structured and standardized communication with Junos devices, enabling automation scripts to query and configure devices.

JET API Requests (C): The jsd process also handles JET (Junos Extension Toolkit) API requests. JET provides a more modern, programmable interface for interacting with Junos OS, and jsd is the process that manages these interactions.

mgd Process (Incorrect Option):

Not for JET API Requests: The mgd process handles general management operations, such as CLI commands and managing the configuration database, but it does not handle JET API requests. That role is fulfilled by jsd.

mod Process (Incorrect Option):

Not for XML API Calls: The mod process deals with managing chassis components and is not involved in handling XML API calls.

Reference:

Juniper Networks JET and XML API Documentation: Describes the roles of jsd in handling both XML and JET API requests.

Junos Automation and DevOps Documentation: Provides insights into how different processes interact with Junos APIs.

NEW QUESTION # 13

Which HTTP status code indicates a response to a successful request?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

Explanation

Reference: https://www.juniper.net/documentation/en_US/junos-space-sdk/13.1/apiref/com.juniper.junos_space.sdk.help/html/reference/Commonbehav.html

NEW QUESTION # 14

Which two statements about NETCONF are correct? (Choose two.)

- A. The default port for NETCONF is port 830.
- B. NETCONF cannot use the default SSH port.
- C. NETCONF can use the default SSH port.
- D. The default port for NETCONF is port 930.

Answer: A,C

Explanation:

NETCONF (Network Configuration Protocol) is used for network device management and can operate over SSH. The following are true about NETCONF:

Default Port 830 (B): By default, NETCONF uses port 830 for communication over SSH. This is the standard port reserved for NETCONF sessions.

Use of Default SSH Port (D): NETCONF can also operate over the standard SSH port (port 22) if configured to do so. This allows flexibility in network management scenarios where port 830 might not be available or used.

Options A and C are incorrect because they refer to incorrect or non-applicable port numbers for NETCONF.

Reference:

IETF RFC 6241: Specifies the use of NETCONF over SSH, including port details.

Juniper Networks NETCONF Documentation: Discusses the configuration and operation of NETCONF on Junos devices, including port usage.

NEW QUESTION # 15

Which two statements are correct about the Junos REST API Explorer? (Choose two.)

- A. The REST API Explorer supports multiple RPC calls.
- B. The REST API Explorer supports both GET and POST calls.
- C. The REST API Explorer returns data only in XML format.
- D. The REST API Explorer is enabled by default on all Junos devices.

Answer: A,B

Explanation:

The Junos REST API Explorer provides an interactive environment to explore and execute REST API calls. The correct statements are:

Supports GET and POST Calls (C): The REST API Explorer allows users to make both GET and POST requests, enabling retrieval and submission of data to the Junos device.

Supports Multiple RPC Calls (D): The REST API Explorer can execute multiple RPC (Remote Procedure Call) commands, allowing a wide range of operations to be performed directly through the interface.

Option A is incorrect because the REST API Explorer is not enabled by default; it must be enabled manually. Option B is incorrect because the REST API Explorer returns data in both XML and JSON formats, not just XML.

Reference:

Junos REST API Explorer Documentation: Provides details on the supported operations and how to use the Explorer for different types of requests.

Juniper Networks Documentation: Covers the setup and usage of the REST API Explorer.

NEW QUESTION # 16

You are using the curl tool to include multiple RPCs in a REST API request.

Which HTTP method must be used for this request?

- A. PUT
- B. HEAD
- C. POST

- Answer: C**
