SY0-701최고덤프데모 최신 시험대비 덤프공부자료

우리Pass4Test 에서 여러분은 아주 간단히CompTIA SY0-701시험을 패스할 수 있습니다. 만약 처음CompTIA SY0-701시험에 도전한다면 우리의CompTIA SY0-701시험자료를 선택하여 다운받고 고부를 한다면 생각보다는 아주 쉽게CompTIA SY0-701시험을 통과할 수 있으며 무엇보다도 시험시의 자신감 증만에 많은 도움이 됩니다. 다른 자료 판매사이트도 많겠지만 저희는 저희 자료에 자신이 있습니다. 우리의 시험자료는 모두 하이퀄리티한 문제와 답으로 구성되었습니다, 그리고 우리는 업데이트를 아주 중요시 생각하기에 어느 사이트보다 더 최신버전을 보실 수 있을것입니다. 우리의CompTIA SY0-701자료로 자신만만한 시험 준비하시기를 바랍니다. 우리를 선택함으로 자신의 시간을 아끼는 셈이라고 생각하시면 됩니다.CompTIA SY0-701로 빠른시일내에 자격증 취득하시고CompTIAIT업계중에 엘리트한 전문가되시기를 바랍니다.

최신 CompTIA Security+ SY0-701 무료샘플문제 (Q412-Q417):

질문 # 412

An employee clicked a link in an email from a payment website that asked the employee to update contact information. The

employee entered the log-in information but received a "page not found" error message. Which of the following types of social engineering attacks occurred?

- A. Brand impersonation
- B. Pretexting
- C. Typosquatting
- **D. Phishing**

정답: D

설명:

Phishing is a type of social engineering attack that involves sending fraudulent emails that appear to be from legitimate sources, such as payment websites, banks, or other trusted entities. The goal of phishing is to trick the recipients into clicking on malicious links, opening malicious attachments, or providing sensitive information, such as log-in credentials, personal data, or financial details. In this scenario, the employee received an email from a payment website that asked the employee to update contact information. The email contained a link that directed the employee to a fake website that mimicked the appearance of the real one. The employee entered the log-in information, but received a "page not found" error message. This indicates that the employee fell victim to a phishing attack, and the attacker may have captured the employee's credentials for the payment website. 질문 # 413

A legacy device is being decommissioned and is no longer receiving updates or patches. Which of the following describes this scenario?

- A. End of business
- B. End of support
- **C. End of life**
- D. End of testing

정답: C

설명:

When a legacy device is no longer receiving updates or patches, it is considered to be at the end of life (EOL)

. This means the manufacturer has ceased support for the device, and it will no longer receive updates, security patches, or technical assistance. EOL devices pose security risks and are often decommissioned or replaced.

* End of support may seem similar but typically refers to the cessation of technical support, whereas EOL means the device is fully retired.

* End of business and End of testing do not apply in this context.

질문 # 414

A systems administrator notices that one of the systems critical for processing customer transactions is running an end-of-life operating system. Which of the following techniques would increase enterprise security?

- **A. Placing the system in an isolated VLAN**
- B. Installing HIDS on the system
- C. Encrypting the system's hard drive
- D. Decommissioning the system

정답: A

설명:

To enhance security for a system running an end-of-life operating system, placing the system in an isolated VLAN is the most effective approach. By isolating the system from the rest of the network, you can limit its exposure to potential threats while maintaining its functionality. This segmentation helps protect the rest of the network from any vulnerabilities in the outdated system.

* Installing HIDS (Host-based Intrusion Detection System) can help detect intrusions but won't mitigate the risks posed by an unsupported OS.

* Decommissioning may not be feasible if the system is critical.

* Encrypting the system's hard drive protects data at rest but doesn't address vulnerabilities from an outdated OS.

질문 # 415

A security analyst scans a company's public network and discovers a host is running a remote desktop that can be used to access the production network. Which of the following changes should the security analyst recommend?

- A. Setting up a VPN and placing the jump server inside the firewall
- B. Changing the remote desktop port to a non-standard number
- C. Using a proxy for web connections from the remote desktop server
- D. Connecting the remote server to the domain and increasing the password length

정답: A

설명:

Explanation

A VPN is a virtual private network that creates a secure tunnel between two or more devices over a public network. A VPN can encrypt and authenticate the data, as well as hide the IP addresses and locations of the devices. A jump server is a server that acts as an intermediary between a user and a target server, such as a production server. A jump server can provide an additional layer of security and access control, as well as logging and auditing capabilities. A firewall is a device or software that filters and blocks unwanted network traffic based on predefined rules. A firewall can protect the internal network from external threats and limit the exposure of sensitive services and ports. A security analyst should recommend setting up a VPN and placing the jump server inside the firewall to improve the security of the remote desktop access to the production network. This way, the remote desktop service will not be exposed to the public network, and only authorized users with VPN credentials can access the jump server and then the production server. 질문 # 416

Which of the following describes a security alerting and monitoring tool that collects system, application, and network logs from multiple sources in a centralized system?

- A. SIEM
- B. IDS
- C. SNMP
- D. DLP

정답: A

설명:

SIEM stands for Security Information and Event Management. It is a security alerting and monitoring tool that collects system, application, and network logs from multiple sources in a centralized system. SIEM can analyze the collected data, correlate events, generate alerts, and provide reports and dashboards. SIEM can also integrate with other security tools and support compliance requirements. SIEM helps organizations to detect and respond to cyber threats, improve security posture, and reduce operational costs.
