## SPLK-1004 Exam Overviews | Reliable SPLK-1004 Exam Camp

It is incontrovertible high quality and high accuracy SPLK-1004 practice materials that have helped more than 98 percent of exam candidates who choose our SPLK-1004 real quiz gets the certificate successfully. So we totally understand you inmost thoughts,

and the desire to win the SPLK-1004 Exam as well as look forward to bright future that come along. During your practice process accompanied by our SPLK-1004 study guide, you will easily get the certificate you want.

## Splunk Core Certified Advanced Power User Sample Questions (Q89-Q94):

### NEW QUESTION # 89

What happens when a bucket's bloom filter predicts a match?

- A. Event data is read from the .tsidx files using the postings from that bucket.
- **B. Event data is read from journal.gz using the .tsidx files from that bucket.**
- C. Field extractions are used to filter through the .tsidx files from that bucket.
- D. The filter is deleted from the indexer and wiped from memory.

**Answer: B**

Explanation:

In Splunk, a bloom filter is a probabilistic data structure used to quickly determine whether a given term or value might exist in a dataset, such as an index bucket. When a bloom filter predicts a match, it indicates that the term may be present, prompting Splunk to perform a more detailed check.

Specifically, when a bloom filter predicts a match:

Event data is read from journal.gz using the .tsidx files from that bucket.

This means that Splunk proceeds to read the raw event data stored in the journal.gz files, guided by the index information in the .tsidx files, to confirm the presence of the term.

### NEW QUESTION # 90

How is a cascading input used?

- A. As part of a dashboard, but not in a form.
- B. Without notation in the underlying XML.
- **C. As a way to filter other input selections.**
- D. As a default way to delete a user role.

**Answer: C**

Explanation:

A cascading input is used as a way to filter other input selections within a dashboard or form (Option C). It enables a dynamic user interface where the selection made in one input (e.g., a dropdown menu) determines the available options in another input. This setup allows for more intuitive and relevant user interactions, as each choice narrows down the subsequent options to ensure they are contextually appropriate.

### NEW QUESTION # 91

When a user opens a dataset in Pivot that has not been accelerated, an ad hoc data model acceleration is created. How long does this accelerated data model last?

- A. For 24 hours after Pivot was opened
- B. For 7 days after Pivot was opened
- C. For the time specified by a Splunk administrator in limits.conf
- **D. For the duration of the user's Pivot session**

**Answer: D**

Explanation:

In Splunk, when a user accesses a dataset in Pivot that lacks persistent acceleration, Splunk automatically creates an ad hoc data model acceleration. This temporary acceleration is designed to enhance performance during the user's current session.

According to Splunk Documentation:

"Ad hoc summaries are always created in a dispatch directory at the search head."

"These summaries are temporary and exist only for the duration of the user's Pivot session." This means that the accelerated data model persists only while the user is actively engaged in the Pivot session. Once the session ends, the ad hoc acceleration is

discarded.

### NEW QUESTION # 92

What does it mean when a command is run and the `is_exact` column is 0?

- A. The distinct count of fields in the field summary is 1.
- B. The distinct count of values for that field is exactly 0.
- C. The distinct count of values in that field is approximated.
- D. The distinct count of values for that field is exact.

**Answer: C**

Explanation:

In Splunk, the `is_exact` field indicates whether the count of distinct values for a particular field is exact or estimated. A value of \* 1 means the count is exact.

\* 0 means the count is an approximation.

Therefore, when `is_exact` is 0, it signifies that the distinct count of values for that field is an estimate, not an exact count.

fields - Splunk Documentation

### NEW QUESTION # 93

What type of drilldown passes a value from a user click into another dashboard or external page?

- A. Dynamic
- B. Contextual
- C. Event
- D. Visualization

**Answer: B**

Explanation:

Contextual drilldown allows values from user clicks to be passed into another dashboard or external page, making dashboards interactive and responsive to user input.

### NEW QUESTION # 94

.....

Being anxious for the exam ahead of you? Have a look of our SPLK-1004 training engine please. Presiding over the line of our SPLK-1004 practice materials over ten years, our experts are proficient as elites who made our SPLK-1004 learning questions, and it is their job to officiate the routines of offering help for you. And i can say no people can know the SPLK-1004 exam braindumps better than them since they are the most professional.
