

Use IAPP AIGP Dumps to Have Great Outcomes In IAPP Exam

BONUS!!! Download part of TestBraindump AIGP dumps for free: https://drive.google.com/open?id=16XmPv1XXx9STgo_GcAQfvcZuY6Ivscy0

If you are motivated to pass AIGP certification exams and you are searching for the best practice material for the AIGP exam, then you are at the right place. We provide 100% guaranteed success for AIGP exams. With our AIGP PDF dumps questions and practice test software, you can increase your chances of getting successful in multiple AIGP Exams. AIGP brain dumps exams can provide you a golden ticket to land a dream job in popular companies.

IAPP AIGP Exam Overview:

Certification Vendor:	IAPP (International Association of Privacy Professionals)
Exam Name:	IAPP Certified Artificial Intelligence Governance Professional (AIGP) Exam
Exam Number:	AIGP
Exam Price:	USD 799 (non-member) / USD 649 (IAPP member)
Certificate Validity Period:	2 years
Real Exam Qty:	100 (85 scored + ~15 unscored pilot questions)
Passing Score:	300 (scaled score out of 100–500)
Available Languages:	English
Related Certifications:	CIPP/E
	CIPP/US
	CIPM
	CIPT
Exam Format:	Multiple-choice, Scenario-based questions, Single-select, Multi-select
Exam Duration:	165 minutes
Recommended Training:	IAPP Official AIGP Training and Resources AIGP Practice Exam (Official IAPP Store)
Exam Registration:	Official IAPP AIGP Exam Registration Pearson VUE Scheduling Portal (via IAPP account)
Sample Questions:	IAPP AIGP Sample Questions
Exam Way:	Computer-based exam delivered via Pearson VUE (test center or online proctored OnVUE)
Pre Condition:	None
Official Syllabus URL:	https://iapp.org/certify/aigp

Braindumps IAPP AIGP Pdf - AIGP Valid Exam Camp Pdf

It is evident to all that the AIGP test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our AIGP test questions are very useful for them to get the certification. There have been 99 percent people used our AIGP exam prep that have passed their exam and get the certification, more importantly, there are signs that this number is increasing slightly. It means that our AIGP Test Questions are very useful for all people to achieve their dreams, and the high quality of our AIGP exam prep is one insurmountable problem.

IAPP AIGP Exam Syllabus Topics:

Topic	Details
Topic 1	Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.
Topic 2	Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.
Topic 3	Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.
Topic 4	Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q13-Q18):

NEW QUESTION # 13

A company deploys an AI model for fraud detection in online transactions. During its operation, the model begins to exhibit high rates of false positives, flagging legitimate transactions as fraudulent.

Which is the best step the company should take to address this development?

- A. Maintain records of all false positives.
- B. Dedicate more resources to monitor the model.
- C. Conduct training for customer service teams to handle flagged transactions.
- D. Deactivate the model until an assessment is made.

Answer: D

Explanation:

When an AI system causes significant false positives, especially in sensitive contexts like fraud detection, the priority is to halt harmful activity and perform a full assessment. Continued use without understanding the fault may cause further customer harm and legal exposure.

From the AI Governance in Practice Report 2025:

"Incident management plans should enable identification, escalation, and system rollback to prevent continued harm from malfunctioning AI systems." (p. 12, 35)

NEW QUESTION # 14

CASE STUDY

Please use the following to answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveying the public sites in order to identify individuals that are likely to have committed a crime.

It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant to assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

Which AI risk would NOT have been identified during the procurement process based on the categories of information requested by the third-party consultant?

- A. Accuracy.
- B. Security.
- C. Discrimination.
- D. Explainability.

Answer: B

Explanation:

The consultant evaluated accuracy, training data diversity (related to discrimination), and system workings (explainability), but security risks were not assessed during procurement.

NEW QUESTION # 15

Scenario:

A large multinational organization is rolling out a company-wide AI governance initiative. To build awareness and support adoption, they are evaluating different ways to train employees and stakeholders across departments, including legal, technical, marketing, and customer-facing roles.

Which of the following typical approaches is a large organization least likely to use to responsibly train stakeholders on AI terminology, strategy and governance?

- A. Providing all technical employees education on AI development so they can retool and participate in the development of AI systems
- B. Providing role-specific training, based on whether the organization uses a centralized, federated or decentralized governance model
- C. Providing information and education to customers and users to understand the capabilities and limitations of the AI tools with which they interact
- D. Providing training on AI ethics, based on the extent to which the organization seeks to promote a responsible AI culture

Answer: A

Explanation:

The correct answer is A. While educating technical staff is important, expecting all technical employees to be retooled as AI developers is unrealistic and not aligned with scalable governance practices.

From the AIGP ILT Guide:

"Training approaches should be role-specific and align with the individual's function and responsibilities...

Organizations typically do not expect every technical role to participate in model development." The AI Governance in Practice Report 2024 supports tailored approaches:

"Cross-functional training should be specific to the individual's role and exposure to AI risk... Role-based education supports scalability and comprehension." Thus, broad development training for all technical employees is the least practical and least likely approach.

NEW QUESTION # 16

CASE STUDY

Please use the following to answer the next question:

A mid-size US healthcare network has decided to develop an AI solution to detect a type of cancer that is most likely to arise in adults. Specifically, the healthcare network intends to create a recognition algorithm that will perform an initial review of all imaging and then route records to a radiologist for secondary review pursuant to agreed-upon criteria (e.g., a confidence score below a threshold).

To date, the healthcare network has:

- Defined its AI ethical principles.
- Conducted discovery to identify the intended uses and success criteria for the system.
- Established an AI risk committee.
- Assembled a cross-functional team with clear roles and responsibilities.
- Created policies and procedures to document standards, workflows, timelines and risk thresholds during the project.

The healthcare network intends to retain a cloud provider to host the solution. It also intends to retain a large consulting firm to supplement its small data science team and help develop the algorithm using the healthcare network's existing data and de-identified data that is licensed from a large US clinical research partner.

Which stakeholder group is most important in selecting the specific type of algorithm?

- A. The healthcare network's risk committee.
- B. The consulting firm.
- C. The cloud provider.
- **D. The healthcare network's data science team.**

Answer: D

Explanation:

The healthcare network's data science team is most important in selecting the specific algorithm type, as they possess the technical expertise and understanding of the data and clinical context required for this decision.

NEW QUESTION # 17

CASE STUDY

Please use the following to answer the next question:

A premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

To address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions. One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company deploy technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize

and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

All of the following are potential negative consequences created by using the AI tool to help make hiring decisions EXCEPT:

- A. Disparate impacts.
- B. Privacy violations.
- C. Automation bias.
- **D. Candidate quality.**

Answer: D

Explanation:

Candidate quality is an intended positive outcome of using the AI tool, not a negative consequence; the other options represent common risks associated with AI hiring systems.
