SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q69-Q74):

NEW QUESTION # 69
You notice that an SAP ERP ODP_SAP DataSource is delivering incorrect values into the first persistent data layer in SAP BW/4HANA. Which options do you have to analyze a potential extractor issue? Note: There are
2 correct answers to this question.

- A. Use the program RODPS_REPL_TEST in SAP ERP.
- B. Check entries in the table RSDDSTATEXTRACT in SAP ERP.
- C. Use the transaction ODQMON (Monitor Delta Queues) in SAP BW/4HANA.
- D. Use the transaction RSA3 (Extractor checker) in SAP ERP.

Answer: A,D

Explanation:
When dealing with incorrect values being delivered by an SAP ERP ODP_SAP DataSource into the first persistent data layer in SAP BW/4HANA, it is crucial to analyze potential issues at the extractor level in the SAP ERP system. Below is a detailed explanation of the correct answers:
* Explanation: The program RODPS_REPL_TEST is used to test the replication of data from an ODP_SAP DataSource in the SAP ERP system. It allows you to simulate the extraction process and verify whether the data being extracted matches the expected values. This helps identify issues with the extractor logic or configuration.
* RODPS_REPL_TEST is a standard tool provided by SAP for testing ODP-based DataSources. It is particularly useful for diagnosing issues related to data extraction in SAP ERP systems.
Option B: Use the transaction ODQMON (Monitor Delta Queues) in SAP BW/4HANAExplanation:
ODQMON is used in SAP BW/4HANA to monitor delta queues and ensure that data is being transferred correctly from the source system. However, it does not help analyze issues at the extractor level in the SAP ERP system. ODQMON focuses on the BW/4HANA side of the data transfer process.
Reference: ODQMON is primarily a monitoring tool for delta queues in BW/4HANA and is not suitable for diagnosing extractor issues in the ERP system.
Option C: Use the transaction RSA3 (Extractor checker) in SAP ERPExplanation: RSA3 is a powerful tool for testing and validating extractors in the SAP ERP system. It allows you to execute the extractor logic and view the extracted data directly in the ERP system. By comparing the extracted data with the expected values, you can identify issues such as incorrect mappings, filters, or transformations.
Reference: RSA3 is widely used for debugging extractor issues in SAP ERP systems. It is an essential tool for ensuring that DataSources deliver accurate data to SAP BW/4HANA.
Option D: Check entries in the table RSDDSTATEXTRACT in SAP ERPExplanation: The table RSDDSTATEXTRACT is not a valid or standard table in SAP ERP systems. It does not exist in the context of ODP_SAP DataSources or extractor diagnostics. Therefore, this option is incorrect.
Reference: SAP documentation does not mention RSDDSTATEXTRACT as a relevant table for analyzing extractor issues.
SummaryTo analyze potential extractor issues in the SAP ERP system:
RODPS_REPL_TEST: Simulates and tests the extraction process for ODP_SAP DataSources.
RSA3: Validates the extractor logic and verifies the extracted data.
These tools help identify and resolve issues at the extractor level, ensuring that correct data is delivered to the first persistent data layer in SAP BW/4HANA.

Correct.
* B: Setting up software components is a core function of the BW Bridge Cockpit, enabling seamless integration between SAP BW/4HANA and SAP Datasphere.
* D: Creating communication systems is another critical task in the BW Bridge Cockpit, as it ensures proper connectivity with external systems.
References:SAP BW/4HANA Integration Documentation: The official documentation outlines the role of the BW Bridge Cockpit in managing software components and communication systems.
SAP Note on BW Bridge Cockpit: Notes such as 3089751 provide detailed guidance on tasks performed in the BW Bridge Cockpit.
SAP Best Practices for Hybrid Integration: These guidelines highlight the importance of software components and communication

systems in hybrid landscapes.

By leveraging the BW Bridge Cockpit, administrators can efficiently manage the integration between SAP BW/4HANA and SAP Datasphere.
