our Development-Lifecycle-and-Deployment-Architect exam guide has not equivocal content that may confuse exam candidates. All question points of our Development-Lifecycle-and-Deployment-Architect study quiz can dispel your doubts clearly. Get our Development-Lifecycle-and-Deployment-Architect certification actual exam and just make sure that you fully understand it and study every single question in it by heart. And we believe you will get benefited from it enormously beyond your expectations with the help our Development-Lifecycle-and-Deployment-Architect Learning Materials.

Salesforce Development-Lifecycle-and-Deployment-Architect certification exam is designed specifically for professionals who are responsible for designing and implementing effective strategies for the development and deployment of applications on the Salesforce platform. Salesforce Certified Development Lifecycle and Deployment Architect certification exam is intended to validate the skills and knowledge required to lead and manage the entire development and deployment process, from planning and designing to testing, deployment, and ongoing maintenance.

To become a Salesforce Certified Development Lifecycle and Deployment Architect, professionals must pass the Salesforce Development-Lifecycle-and-Deployment-Architect Exam. Development-Lifecycle-and-Deployment-Architect exam covers a range of topics related to Salesforce development and deployment, including testing, release management, continuous integration, and continuous deployment. Professionals who pass the exam will have demonstrated their ability to design and implement effective development and deployment strategies for Salesforce applications.

## Certification Development-Lifecycle-and-Deployment-Architect Test Answers, Development-Lifecycle-and-Deployment-Architect Practice Engine

As is known to us, different people have different understanding of learning, and also use different methods in different periods, and different learning activities suit different people, at different times of the day. Our Development-Lifecycle-and-Deployment-Architect test questions are carefully designed by a lot of experts and professors in order to meet the needs of all customers. We can promise that our Development-Lifecycle-and-Deployment-Architect Exam Question will be suitable for all people, including student, housewife, and worker and so on. No matter who you are, you must find that our Development-Lifecycle-and-Deployment-Architect guide torrent will help you pass the Development-Lifecycle-and-Deployment-Architect exam easily.

Salesforce Development-Lifecycle-and-Deployment-Architect Exam is designed to test the knowledge and skills of developers who are responsible for managing the development and deployment of Salesforce applications. Salesforce Certified Development Lifecycle and Deployment Architect certification is intended for individuals who have a deep understanding of the Salesforce platform and can design and implement complex solutions using the latest development methodologies.

### Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q138-Q143):

#### NEW QUESTION # 138

Universal Containers has five development teams. The performance of the teams has been good, but the number of bugs has been increasing. After each sprint, they need more time to understand the code and make changes.  
What are two ways to improve the performance?

Choose 2 answers

- A. Define a team that will analyze/approve all changes.
- **B. Define and follow code standards.**
- **C. Sprint review process.**
- D. Version control system to identify who is generating the bugs.

**Answer: B,C**

Explanation:

Explanation

To improve the performance of the development teams, the following ways can be suggested: Define and follow code standards, and implement a sprint review process. Code standards can help ensure consistency, readability, and maintainability of the code, as well as reduce errors and bugs. A sprint review process can help evaluate the work done in each sprint, demonstrate the functionality, and gather feedback from the stakeholders and users.

#### NEW QUESTION # 139

What are two roles a project Steering Committee plays in determining what methodologies are used? Choose 2 answers

- **A. Setting the criteria for selecting Agile or Waterfall methodology to be used on internal projects**
- B. Enforcing that corporate project stage gates are part of the chosen methodology
- C. Designing a methodology that will meet a particular project's requirements
- **D. Approving deviations from the chosen methodology, when required to address project issues**

**Answer: A,D**

Explanation:

These are the correct answers because the project steering committee plays a role in approving deviations from the chosen methodology, when required to address project issues, and setting the criteria for selecting agile or waterfall methodology to be used on internal projects. The steering committee does not design a methodology, but rather chooses one from the existing ones. The steering committee does not enforce that corporate project stage gates are part of the chosen methodology but rather ensures that the chosen methodology aligns with the corporate project stage gates.

#### NEW QUESTION # 140

Which two actions will contribute to an improvement of code security?  
Choose 2 answers

- A. Hire a company specialized in secure code review the current code.
- **B. Integrate a static code security analysis tool in the CI/CD process.**
- C. Use two developers to review and fix current code vulnerabilities.
- **D. Implement a pull request and secure code review.**

**Answer: B,D**

Explanation:

Explanation

Implementing a pull request and secure code review will contribute to an improvement of code security by ensuring that the code is checked and approved by another developer before merging to the main branch.

Integrating a static code security analysis tool in the CI/CD process will contribute to an improvement of code security by automatically scanning the code for vulnerabilities and enforcing security standards. Hiring a company specialized in secure code review or using two developers to review and fix current code vulnerabilities are not actions that will improve code security, but rather remediate existing security issues.

#### NEW QUESTION # 141

Universal Containers has discovered a Sev0 defect in production. Tens of thousands of records will be created with incorrect data in minutes, producing significant brand damage as a consequence. The Salesforce administrator has suggested that the defective text field be replaced with a new picklist field directly in production. The page layout will be modified so that the text-field is removed and the new picklist field added.

What should the Salesforce architect advise?

- A. Explain that only developers are certified to make changes directly in production.
- B. Deny the suggestion and explain to everyone that the risk is too high and the next release window is on the weekend.
- **C. Pair with the administrator, and review each change as it happens**
- D. Call the security team and begin organizing a penetration test.

**Answer: C**

#### NEW QUESTION # 142

Which are two characteristics of an effective communication plan? Choose 2 answers

- **A. Reporting project status, timelines, and impacts**
- B. Consistent communication to a pre-defined list of stakeholders
- C. Communication to stakeholders on a "need-to-know" basis
- **D. Requesting feedback for outstanding architectural questions**

**Answer: A,D**

Explanation:

A and C are the characteristics of an effective communication plan, as they enable feedback, collaboration, and transparency among the stakeholders. B is not a characteristic of an effective communication plan, as it does not account for changes in the stakeholder list or their communication preferences. D is not a characteristic of an effective communication plan, as it limits the information sharing and trust among the stakeholders.
