SPLK-3002 Exam covers a wide range of topics, including ITSI architecture, data input and management, service analysis and visualization, and advanced troubleshooting.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q94-Q99):

NEW QUESTION # 94

What is an episode?

- A. A notable event group.
- B. A workflow task.
- **C. A notable event.**
- D. A deep dive.

Answer: C

Explanation:

Explanation

It's a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation.

NEW QUESTION # 95

How can admins manually control groupings of notable events?

- A. Multi-KPI alerts.
- **B. Aggregation policies.**
- C. Correlation searches.
- D. notable_event_grouping.conf

Answer: B

Explanation:

In Splunk IT Service Intelligence (ITSI), administrators can manually control the grouping of notable events using aggregation policies. Aggregation policies allow for the definition of criteria based on which notable events are grouped together. This includes configuring rules based on event fields, severity, source, or other event attributes. Through these policies, administrators can tailor the event grouping logic to meet the specific needs of their environment, ensuring that related events are grouped in a manner that facilitates efficient analysis and response. This feature is crucial for managing the volume of events and focusing on the most critical issues by effectively organizing related events into manageable groups.

NEW QUESTION # 96

Which of the following is the best use case for configuring a Multi-KPI Alert?

- **A. Comparing content between two notable events.**
- B. Using machine learning to evaluate when data falls outside of an expected pattern.
- C. Raising an alert when one or more KPIs indicate an outage is occurring.
- D. Comparing anomaly detection between two KPIs.

Answer: A

NEW QUESTION # 97

When must a service define entity rules?

- A. To enable entity cohesion anomaly detection.
- B. If the intention is for the KPIs in the service to have different aggregate vs. entity KPI values.
- **C. If the intention is for the KPIs in the service to filter to only entities assigned to the service.**
- D. If some or all of the KPIs in the service will be split by entity.

Answer: C

Explanation:

Provide a value to filter the service to a specific set of entities. These entity rule values are meant to be custom for each service.

Reference:

A is the correct answer because a service must define entity rules if the intention is for the KPIs in the service to filter to only entities assigned to the service. Entity rules are filters that match entities to services based on entity aliases or entity metadata. If you enable the Filter to Entities in Service option for a KPI, you need to define entity rules for the service to ensure that the KPI search results
