

# Test 3V0-21.25 Book & Related 3V0-21.25 Exams

2026 Latest Itexamguide 3V0-21.25 PDF Dumps and 3V0-21.25 Exam Engine Free Share: <https://drive.google.com/open?id=1XOYZLjxuVEJrJvlGYDPf245q2RkjDByc>

For one thing, the most advanced operation system in our company which can assure you the fastest delivery speed on our 3V0-21.25 exam questions, and your personal information will be encrypted automatically by our operation system. For another thing, with our 3V0-21.25 actual exam, you can just feel free to practice the questions in our training materials on all kinds of electronic devices. In addition, under the help of our 3V0-21.25 Exam Questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future.

About the upcoming 3V0-21.25 exam, do you have mastered the key parts which the exam will test up to now? Everyone is conscious of the importance and only the smart one with smart way can make it. Maybe you are unfamiliar with our 3V0-21.25 Latest Material, but our 3V0-21.25 real questions are applicable to this exam with high passing rate up to 98 percent and over.

## VMware Test 3V0-21.25 Book: Advanced VMware Cloud Foundation 9.0 Automation - Itexamguide Reliable Planform

VMware 3V0-21.25 certification exam is a high demand exam tests in IT field because it proves your ability and professional technology. To get the authoritative certification, you need to overcome the difficulty of 3V0-21.25 Test Questions and complete the

actual test perfectly. Our training materials contain the latest exam questions and valid 3V0-21.25 exam answers for the exam preparation, which will ensure you clear exam 100%.

## VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q60-Q65):

### NEW QUESTION # 60

A customer needs to deploy Kubernetes-based workloads in a newly created VMware Cloud Foundation (VCF) workload domain.

Which two prerequisites must be met before creating an AllApps Organization in VMware Cloud Foundation (VCF) Automation? (Choose two.)

- A. The VMware Kubernetes Service (VKS) must be activated within the VCF Management domain.
- B. The VCF workload domain must be configured for VMware NSX Federation.
- C. A Region must be configured within the VCF Automation Provider Management Portal.
- D. Supervisor must be activated within the VCF workload domain.
- E. Supervisor must be activated within the VCF Management domain and workload domain.

**Answer: C,D**

Explanation:

To support an AllApps Organization, which is inherently designed for both Kubernetes and VM workloads, the underlying infrastructure must be "modernized" via the vSphere Supervisor. Activating the Supervisor within the specific Workload Domain is the primary prerequisite, as it transforms the standard vSphere clusters into a Kubernetes-native control plane. Once the hardware/vSphere layer is ready, the next mandatory step takes place within the VCF Automation Provider Management Portal, where the administrator must define a Region. The Region acts as the "bridge" between the physical workload domain and the logical Organization; it discovers the Supervisor clusters and makes their compute, memory, and storage classes available for tenant assignment. Without a defined Region, the AllApps Organization has no source of resources to consume, and without an active Supervisor, the AllApps networking (VPC) and container services (VKS) cannot function.

### NEW QUESTION # 61

An organization requires a solution that provides a "Google Cloud-like" consumption model for their on- premises infrastructure. They need to provide developers with a single portal where they can request:

- \* Virtual Machines (Windows and Linux).
- \* Tanzu Kubernetes Grid (TKG) clusters.
- \* S3-compatible Object Storage.
- \* Managed Database Services.

Which VCF 9.0 capability directly addresses this requirement?

- A. VCF Operations dashboarding
- B. AllApps Organizations leveraging Supervisor Services
- C. NSX VPC isolation
- D. VMApps Organizations

**Answer: B**

Explanation:

The AllApps Organization in VCF 9.0 is specifically engineered to provide the "cloud-native" consumption experience required by modern development teams. While traditional VM management is handled by VMApps, the AllApps model unlocks the full potential of the vSphere Supervisor. By leveraging Supervisor Services, the organization can present a catalog that goes far beyond simple IaaS. Developers can provision not only VMs and TKG clusters but also higher-level services like vSAN Data Persistence platform for S3-compatible storage and managed databases (e.g., PostgreSQL or MySQL) through integrated operators. This architecture abstracts the underlying vSphere and NSX complexity, presenting the developer with a unified API and UI for multi-cloud-style resource consumption, directly fulfilling the goal of providing a public-cloud-like experience within the on-premises data center.

### NEW QUESTION # 62

An administrator is tasked with configuring an existing Organization to enable users to create namespaces with GPU resources on their assigned Projects.

The Organization is backed by a Region with a GPU-enabled supervisor on a single zone setup. What needs to be configured for this requirement?

- A. NVIDIA grid\_a100-40c profile.
- **B. Namespace Class with VM Class Reservations.**
- C. NVIDIA GPU Operator.
- D. GPU enabled VM Classes.

**Answer: B**

Explanation:

To deliver GPU resources to tenant users in VCF 9.0, the administrator must bridge the physical hardware to the logical project via a Namespace Class. Specifically, the administrator must create or modify a Namespace Class to include VM Class Reservations for GPU-enabled classes. In VCF 9.0, a "Namespace Class" defines the templates and limits for the Kubernetes namespaces that users can create. By adding a GPU-enabled VM Class (such as one utilizing NVIDIA vGPU profiles) to the reservation list within the Namespace Class, the administrator ensures that the Supervisor knows to prioritize and reserve those specific hardware resources for workloads deployed into that namespace. Once this Namespace Class is bound to the user's Project, the users can then select the GPU-enabled classes when deploying their containers or VMs, fulfilling the requirement for high-performance compute within the multi-tenant environment.

### NEW QUESTION # 63

A customer created a workflow to execute during machine provisioning in a VMApps Organization within VMware Cloud Foundation (VCF) Automation 9. The workflow includes inputs that interact with the provisioning-payload data. When a machine is requested, provisioning completes successfully, but the workflow does not run. What is the cause of the workflow-execution failure?

- A. The Event Broker Subscription is set to blocking.
- B. The Event Broker Subscription is set to non-blocking.
- C. The workflow is signed.
- **D. The workflow is not signed.**

**Answer: D**

Explanation:

VCF 9.0 introduces enhanced security requirements for Operations Orchestrator integration, specifically regarding the execution of custom extensibility logic. A common cause for a workflow failing to trigger, even when the provisioning process itself is successful, is that the workflow is not signed. By default, VCF 9.0 Automation enforces a security policy that requires all custom workflows to be digitally signed by a trusted certificate before the Event Broker Service (EBS) will execute them. This prevents unauthorized or malicious scripts from running within the management plane of the private cloud. If the workflow is not signed, the EBS will silently ignore the trigger or log a security violation in the background, while the main VM provisioning-which is a separate process-continues to completion. The administrator must import the developer certificate into the Orchestrator and sign the workflow package to authorize its execution in the production environment.

### NEW QUESTION # 64

An administrator is responsible for managing a VMware Cloud Foundation (VCF)-based private cloud. The private cloud consists of a single organization with a project named production. The administrator has been tasked with ensuring that the following are standardized across all existing and new blueprints within the production project:

\* Inputs: size, OS, location

\* Constants: salt\_master\_id

Which three actions should the administrator take to meet the objective? (Choose three.)

- A. Create a new Property Group containing all required properties for the production project.
- B. Update all blueprints within the organization to use the same locally configured inputs.
- **C. Update all existing blueprints within the production project with the new Property Group(s).**
- **D. Create a new Property Group containing all constant properties for the production project.**
- **E. Create a new Property Group containing all input properties for the production project.**

**Answer: C,D,E**

Explanation:

Property Groups are the primary mechanism in VCF 9.0 Automation for achieving "reusability" and standardization across multiple cloud templates (blueprints). Instead of manually defining the same inputs or constants in every individual YAML file-which is prone to human error and difficult to update-the administrator creates a centralized group. For the requirements provided, the administrator should Create a Property Group for constants (to hold the salt\_master\_id) and Create a Property Group for inputs (to hold size, OS, and location). These groups are then associated with the Production Project. The final step is to Update existing blueprints to reference these property groups using the prop syntax. This ensures that if the salt\_master\_id ever changes, the administrator only needs to update it in one central location, and all associated deployments will automatically reflect the change, significantly reducing operational overhead and ensuring environment consistency.

## NEW QUESTION # 65

.....

In this version, you don't need an active internet connection to use the 3V0-21.25 practice test software. This software mimics the style of real test so that users find out pattern of the real test and kill the exam anxiety. Itexamguide offline practice exam is customizable and users can change questions and duration of Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) mock tests. All the given practice questions in the desktop software are identical to the Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) actual test.
