They can also designate specific roles within shifts, including shift leads and members, to define responsibilities. Additionally, queue rules can be established based on certain conditions, ensuring that incidents and tasks are assigned according to predefined criteria, which helps streamline operations and improve response times.

問題 #30

Which two statements about appliance users are true? (Choose two.)

- A. Appliance users do not have a login ID and do not add to the license count.
- B. Appliance users represent non-human users.
- C. Appliance users use time-expiring tokens for primary authentication.
- D. Appliance users use two-factor authentication for messages sent to the API.

答案: A,B

解題說明:

In FortiSOAR, appliance users are accounts that represent non-human entities, such as system processes or integrations. These users do not require login IDs and therefore do not contribute to the licensing user count.

Appliance users are configured for backend tasks or to interact with external systems, enabling automated processes without consuming standard user licenses. This approach optimizes system resources and keeps licensing costs manageable.
