In fact, sticking to a resolution will boost your sense of self-esteem and self-control. So our CT-PT exam materials can become your new aim. Our CT-PT study materials could make a difference to your employment prospects. Getting rewards need to create your own value to your company. However, your capacity for work directly proves your value. As long as you get your CT-PT Certification with our CT-PT practice braindumps, you will have a better career for sure.

ISTQB CT-PT Exam Syllabus Topics:

Topic	Details
Topic 1	• The Concept of Load Generation: This section of the exam measures the skills of Software Test Analysts and discusses how representative loads are modeled and produced to simulate user or process behavior. It explores methods such as user interface inputs, crowdsourcing, API-based calls, or protocol capture and playback, emphasizing the need for repeatable loads that accurately reflect real-world conditions.
Topic 2	• Types of Performance Testing: This section of the exam measures the skills of Software Test Analysts and covers various approaches such as load, stress, scalability, spike, endurance, concurrency, and capacity testing. It explains how each type evaluates system behavior under different conditions, helping testers and stakeholders understand how the system handles both expected and extreme usage scenarios.
Topic 3	• Testing Types in Performance Testing: This section of the exam introduces the distinction between static and dynamic performance testing. It shows how reviews of requirements, architecture, and code can identify risks before coding is complete, and how runtime checks of resource utilization and response times reveal issues that only appear when the system is in operation.
Topic 4	• Common Failures in Performance Testing and Their Causes: This section of the exam measures the skills of Performance Engineers and outlines frequent failure modes, including slow responses at various load levels, degraded performance over time, and system crashes under peak conditions. It provides examples of underlying causes such as resource leaks, insufficient capacity, and poor handling of spikes or concurrency, illustrating why robust planning and monitoring are crucial for reliable performance.

Considering that our customers are from different countries, there is a time difference between us, but we still provide the most thoughtful online after-sale service twenty four hours a day, seven days a week, so just feel free to contact with us through email anywhere at any time. Our commitment of helping you to Pass CT-PT Exam will never change. Considerate 24/7 service shows our attitudes, we always consider our candidates' benefits and we guarantee that our CT-PT test questions are the most excellent path for you to pass the exam.

ISTQB Certified Tester - Performance Testing Sample Questions (Q31-Q36):

NEW QUESTION # 31
Which of the following can provide measurements for both individual and aggregated elements within a single performance test?

- A. Aggregated metrics
- B. Process optimization tracking
- C. Nested transactions
- D. Measuring underlying transactions

Answer: C

Explanation:
Nested transactions allow performance tests to capture both individual and aggregated elements by grouping multiple related transactions and measuring their cumulative impact.
Option A (Aggregated metrics) provides summaries but lacks insight into individual elements.
Option B (Process optimization tracking) focuses on business process improvement, not test metrics.
Option C (Measuring underlying transactions) focuses only on individual transactions.

NEW QUESTION # 32
What is an advantage of aggregating the results of performance testing?

- A. Testing is expedited when the results are aggregated.
- B. It is easier for stakeholders to draw a correct conclusion from aggregated results.
- C. Aggregated results show when testing has been completed.
- D. Aggregated results provide more detail and allow for a more complete analysis of the test.

Answer: B

Explanation:
Aggregating test results helps stakeholders understand performance trends by combining data points from multiple test runs. This makes it easier to draw conclusions about system behavior.
Option A is incorrect because aggregation may reduce detailed visibility, not increase it.
Option B is incorrect because aggregation does not expedite testing itself.
Option D is incorrect because aggregated results do not indicate test completion.

NEW QUESTION # 33
Which of the following is considered a common database protocol?

- A. SMP
- B. MMS
- C. JUNIT
- D. ODBC

Answer: D

Explanation:
ODBC (Open Database Connectivity) is a standard database protocol that enables applications to connect to and interact with databases regardless of vendor specifications.
Option B (JUNIT) is a unit testing framework, not a database protocol.
Option C (SMP - Symmetric Multiprocessing) relates to CPU architecture, not databases.
Option D (MMS - Multimedia Messaging Service) is related to mobile messaging, not database communication.

NEW QUESTION # 34

Which of the following performance script types measures network response times?

- A. Protocol-level scripts
- B. HTTP scripts
- C. API scripts
- D. GUI scripts

Answer: A

Explanation:
Protocol-level scripts measure the actual response times of network requests, making them ideal for analyzing network latency, bandwidth issues, and server response times.
Option A (GUI scripts) measure user interactions, not network timing.
Option B (API scripts) measure API interactions but do not provide detailed network response time analysis.
Option C (HTTP scripts) measure web requests but lack low-level network insights.

NEW QUESTION # 35

Which of the following is a best practice to include in performance test scripts when verifying results?

- A. Increase the number of scripts executed to provide greater coverage.
- B. Verify that correct information was added to the database.
- C. Add transaction timers to collect response times.
- D. Hold the development team accountable for system performance.

Answer: B

Explanation:
One of the best practices in performance test scripting is to validate that correct data is recorded in the database after execution.
This ensures that performance issues do not impact data integrity.
Option A (Increasing the number of scripts) may provide more coverage but does not verify accuracy.
Option C (Adding transaction timers) is useful for performance monitoring but does not ensure correct data entry.
Option D (Holding the development team accountable) is a management responsibility, not a scripting best practice.
