Hot Download CDCP Free Dumps | Efficient EXIN CDCP Valid Exam Format: Certified Data Centre Professional (CDCP)

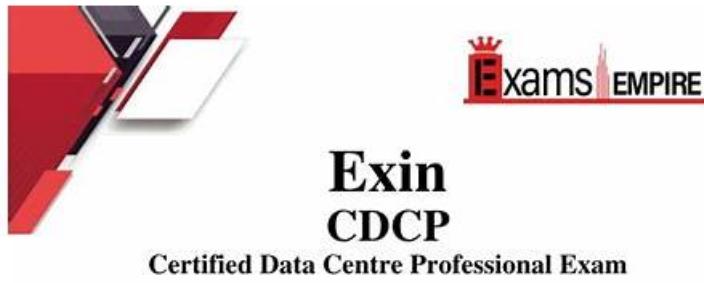

2026 Latest BraindumpStudy CDCP PDF Dumps and CDCP Exam Engine Free Share: https://drive.google.com/open?id=15LIT28MCJGmJ9Cs5hMVjSyZHTSHE99We

Our CDCP practice questions attract users from all over the world because they really have their own charm. No product like our CDCP study guide will seriously consider the needs of users in all aspects. From product content to system settings, we will give you what you want! Firstly, you definitely want to pass the exam for sure. Our CDCP Exam Questions are high-effective with a high pass rate as 98% to 100%. So don't hesitate, just come and buy our CDCP learning braindumps!

As is known to us, our company is professional brand established for compiling the CDCP exam materials for all candidates. The CDCP guide files from our company are designed by a lot of experts and professors of our company in the field. We can promise that the CDCP certification preparation materials of our company have the absolute authority in the study materials market. We believe that the study materials designed by our company will be the most suitable choice for you. You can totally depend on the CDCP Guide files of our company when you are preparing for the exam.

Pass Guaranteed Quiz 2026 EXIN CDCP: The Best Download Certified Data Centre Professional (CDCP) Free Dumps

We have free demos of our CDCP exam questions for your information and the demos offer details of real exam contents. All

contents of CDCP practice quiz contain what need to be mastered. And not only the content is contained that you can free download from the website, also you can find that the displays of the CDCP Study Materials can be tried as well for we have three versions, according we also have three kinds of free demos.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which formula can provide a simple 'cost of downtime per hour" without taking seasonality and other factors into account?

- A. Revenue/365
- B. Revenue/8760
- C. Revenue/1024
- D. Revenue/52

Answer: B

Explanation:
8760 is the number of hours in a year (24 hours × 365 days). Dividing annual revenue by 8760 gives a basic average revenue per hour, commonly used in downtime cost calculations.

NEW QUESTION # 21
Does shielded twisted pair network cabling provide protection against EMF from power cables?

- A. Yes, but only if the power cable is placed in a tre-foil cable arrangement.
- B. No, the shielding for twisted pair network cabling is for physical protection against vandalism and accidental cutting of the cable.
- C. No, the shielding is designed for alien cross-talk between network cables, it provides no or little protection against low frequency EMF.
- D. Yes, as the shielding for twisted pair network cabling is specifically design for low frequency EMF protection.

Answer: C

Explanation:
Shielded twisted pair cables (STP) are Ethernet cables that feature additional protection against electromagnetic interference from external sources, such as radio waves, microwaves, or other network cables. This is achieved by wrapping each pair of wires with a conductive shield, usually made of foil or braided wire, and then enclosing the entire cable with another shield layer. However, this shielding is not effective against low frequency electromagnetic fields (EMF) from power cables, which can induce currents and voltages in the network cables and cause signal distortion or data loss. Low frequency EMF can only be reduced by increasing the distance between the power and network cables, or by using a tre-foil cable arrangement, which is a special configuration of three power cables twisted together to cancel out the magnetic fields they generate.

NEW QUESTION # 22
What should be considered when implementing hot- or cold-aisle containment in an existing computer room?

- A. It will be more difficult to install power and network cabling in the contained area.
- B. Equipment will get too hot at the rear (back) of the rack potentially resulting in more ICT hardware failures.
- C. The delta-T of the equipment will increase too much causing reliability issues.
- D. It creates potential issues with the existing fire suppression system(s).

Answer: D

Explanation:
Hot- or cold-aisle containment is a strategy to improve the cooling efficiency and reduce the energy consumption of data centers by

isolating the hot exhaust air from the cold supply air. However, implementing this strategy in an existing computer room may create potential issues with the existing fire suppression system(s), such as:

*The containment barriers may interfere with the distribution and activation of the fire suppression agents, such as water, gas, or aerosol, and reduce their effectiveness in extinguishing a fire.

*The containment barriers may create pockets of high temperature and pressure that could damage the equipment or the containment structure itself in the event of a fire.

*The containment barriers may obstruct the access and visibility of the fire detection and alarm devices, such as smoke detectors, heat sensors, or manual call points, and delay the response time of the fire suppression system(s).

*The containment barriers may violate the local fire codes and regulations that specify the minimum clearance and ventilation requirements for the data center.

Therefore, when implementing hot- or cold-aisle containment in an existing computer room, it is important to consider the impact on the existing fire suppression system(s) and take appropriate measures to ensure the safety and compliance of the data center, such as:

*Consulting with the fire authorities and the fire suppression system vendor to assess the compatibility and suitability of the containment solution with the existing fire suppression system(s).

*Modifying or upgrading the existing fire suppression system(s) to accommodate the containment solution, such as relocating or adding fire suppression devices, adjusting the discharge rate and pressure, or installing a secondary fire suppression system within the contained area.

*Installing fire-rated containment barriers that can withstand high temperatures and resist the spread of fire and smoke, and that have self-closing or automatic release mechanisms in case of a fire.

*Installing fire detection and alarm devices within the contained area and ensuring their proper integration and communication with the existing fire suppression system(s).

*Conducting regular testing and maintenance of the fire suppression system(s) and the containment solution to ensure their functionality and reliability.

NEW QUESTION # 23

What is the most preferred unit of measure for cooling capacity?

- A. Horsepower
- B. Ton
- C. BTU
- D. Watt

Answer: D

Explanation:

Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.

Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

NEW QUESTION # 24

What is the main advantage of busbar trunking compared to stand electrical cabling?

- A. Busbar trunking can be located both overhead and under the raised floor.
- B. Busbar trunking has a fixed power rating.
- C. Busbar trunking allows for flexibility.
- D. Busbar trunking is less expensive.

Answer: C

Explanation:
Busbar trunking systems are a method of power distribution using rigid copper or aluminium conductors to distribute the power around a building. Busbar trunking systems have many advantages over cables, such as lower space requirements, higher short-circuit strength, lower fire load, and easier installation. One of the main advantages of busbar trunking is that it allows for flexibility in terms of power transmission and distribution. Busbar trunking systems can be easily relocated, modified, or expanded to accommodate changes in the building layout or load demand. Busbar trunking systems can also be fitted with various components, such as tap-off units, elbows, tees, and end feed units, to provide power to different locations and consumers.
Busbar trunking systems can also be installed both overhead and under the raised floor, depending on the design and preference of the building.

NEW QUESTION # 25

......

The service of CDCP test guide is very prominent. It always considers the needs of customers in the development process. There are three versions of our CDCP learning question, PDF, PC and APP. Each version has its own advantages. You can choose according to your needs. Of course, you can use the trial version of CDCP Exam Training in advance. After you use it, you will have a more profound experience. You can choose your favorite our study materials version according to your feelings. When you use CDCP test guide, you can also get our services at any time.
