For our passing rate of SPLK-1002 practice quiz has reached up to 98 to 100 percent up to now. Besides, free updates of SPLK-1002 learning guide will be sent to your mailbox freely for one year after payment, and you will have a great experience during usage of our SPLK-1002 study prep.

Splunk Core Certified Power User Exam Sample Questions (Q218-Q223):

NEW QUESTION # 218

Why would the following search produce multiple transactions instead of one?

- A. The transaction command has a limit of 1000 events per transaction.
- **B. The maxspan option is not included.**
- C. The stats list () function is used.
- D. The transaction and commands cannot be used together.

Answer: B

Explanation:

In Splunk, the transaction command is used to group events that share common characteristics into a single transaction. By default, the transaction command groups all matching events into a single transaction.

However, you can use the maxspan option to limit the time span of the transactions. If the time span between the first and last event in a transaction exceeds the maxspan value, the transaction command will start a new transaction.

Therefore, if the maxspan option is not included in the search, the transaction command might produce multiple transactions instead of one if the time span between the first and last event in a transaction exceeds the default maxspan value.

Here is an example of how you can use the maxspan option in a search:

`index=main sourcetype=access_combined | transaction someuniquefield maxspan=1h` In this search, the transaction command groups events that share the same someuniquefield value into a single transaction, but only if the time span between the first and last event in the transaction does not exceed 1 hour. If the time span exceeds 1 hour, the transaction command will start a new transaction.

NEW QUESTION # 219

The transaction command allows you to _____ events across multiple sources

- A. tag
- B. duplicate
- **C. correlate**
- D. persist

Answer: C

NEW QUESTION # 220

Which of the following commands will show the maximum bytes?

- A. `sourcetype=access_* | max(bytes)`
- B. `sourcetype=access_* | avg (bytes)`
- **C. `sourcetype=access_* | stats max(bytes)`**
- D. `sourcetype=access_* | maximum totals by bytes`

Answer: C

NEW QUESTION # 221

What does the fillnull command replace null values with, if the value argument is not specified?

- **A. 0**
- B. N/A
- C. NULL
