

Best Relativity RCA PDF Download Professionally Researched by Relativity Certified Trainers

Our web-based practice test is accessible from anywhere with an internet connection, which means you can take it at your convenience. This Relativity RCA Practice Test is designed to simulate the actual exam and help you become familiar with the test format. You can access the web-based practice exam from anywhere with an internet connection to study on the go or from the comfort of your own home. You can receive your mock exam result instantly.

The price of the RCA test dumps is quite reasonable, no matter you are the students or the employees of the enterprise, you can afford it. RCA test dumps are verified by the specialists of the business, therefore the quality is ensured. Pass guarantee and money back guarantee for purchasing the RCA Test Dumps. Other questions or problem of the product can consult the live chat service staff or by email, we will reply you immediately.

Passing Relativity RCA Exam is Easy with Our Reliable RCA PDF Download: Relativity Certified Administrator

In the face of fierce competition, you should understand the importance of time. You must walk in front of the competitors. If you have more strength, you will get more opportunities. Your dream life can really become a reality! RCA learning materials are here, right to choose! And you will find that you will get benefited from RCA Exam Braindumps far beyond you can image. Not only you can get more professional knowledge but also you can get the RCA certification to find a better career.

Relativity Certified Administrator Sample Questions (Q76-Q81):

NEW QUESTION # 76

A reviewer updated the coding decision on a document from null to Responsive on the single choice Responsive Designation field. You later discover this coding decision was incorrect. You attempt to use Audit to revert the coding decision, but find you are unable to revert. Why might this be?

- A. You can only mass revert, you cannot revert the coding decision on a single document.
- B. You cannot use Audit to revert coding decisions on documents once they are produced.
- C. You cannot use Audit to revert coding decisions on single choice fields.
- **D. You cannot use Audit to revert coding decisions on required fields back to a null state.**

Answer: D

Explanation:

The correct answer is C. You cannot use Audit to revert coding decisions on required fields back to a null state. Relativity's official Audit documentation states that certain field types, including single choice, can be reverted. However, it also explicitly states that you cannot revert a required field if doing so would return that field to a blank null value. That is exactly what this scenario describes: the field was changed from null to Responsive, and reverting would restore it to null. If the field is required, Relativity blocks that revert because required fields cannot be blank.

This means option A is incorrect because single-choice fields can be reverted in Audit. Option B is also incorrect because Relativity supports both individual and mass revert workflows depending on the situation.

Option D is not the documented reason for the failure. The controlling issue is the required-field constraint.

From an RCA perspective, this is a subtle but important administrative behavior: the Audit system can revert field changes, but only

where the resulting value remains valid under Relativity's field rules. If the revert would violate a field's required setting, the system will not allow it. Therefore, the most accurate reason is that Audit cannot revert the value because the revert would place a required field back into a null state .

NEW QUESTION # 77

What workflow is not supported by Import/Export?

- A. Document load file import.
- B. Unstructured data workflow with Processing.
- C. Image load file import.
- **D. Saved Search import.**

Answer: D

Explanation:

The correct answer is D. Saved Search import. Relativity's official Import/Export workflow overview states that Import/Export supports unprocessed raw native files , document load files , image load files , production load files , and Relativity Dynamic Objects for import. On the export side, it supports folders , production sets , saved searches , and RDO files . In other words, saved searches are export workflows, not import workflows .

That distinction is important for RCA-level administration because Import/Export is organized around specific import and export pathways. A Saved Search import is not listed as a supported workflow because a saved search is a Relativity object used to define document criteria inside a workspace, not a standard external load-file-based content import. By contrast, document load file import and image load file import are explicitly supported workflows, and Relativity also supports unstructured data import for processing. Therefore, among the options given, the unsupported Import/Export workflow is Saved Search import . This is consistent with Relativity's current documentation, which shows Saved Search only under export workflows.

NEW QUESTION # 78

Which of the following fields does a transcript's Word Index contain?

- A. Exhibit number
- B. Count
- **C. Speaker**
- D. Associated fact

Answer: C

Explanation:

The correct answer is C. Speaker . In Relativity transcript review, the Word Index is used to navigate the transcript content by words and speakers appearing in the testimony. The transcript review experience centers on transcript text structure, including speaker-based navigation, rather than fields like associated facts or exhibits, which belong to different transcript-management features. Relativity's transcript tooling distinguishes transcript content navigation from fact management and exhibit linking, so Speaker is the correct Word Index field from the choices given.

The other options correspond to different transcript-related concepts. Associated fact belongs to fact management workflows, Exhibit number relates to transcript exhibits, and Count is not the specific transcript Word Index field tested here. While the current public help snippets I found do not surface the exact Word Index field list in one compact line, the available transcript/user documentation supports the transcript- review distinction that makes Speaker the correct answer. This one is slightly less directly quoted than some of the others, but it remains the best verified answer from Relativity transcript behavior.

NEW QUESTION # 79

You expect a large amount of data from the United Kingdom. What steps should you take to prepare your index for date searching?

- A. None. UK date formats are not supported.
- B. Add the forward slash / character to the alphabet file.
- C. Update the Native Time Zone Offset field in the dtSearch index.
- **D. Turn on Date Recognition before building the dtSearch index.**

Answer: D

Explanation:

The correct answer is B. Turn on Date Recognition before building the dtSearch index. Relativity's Searching Guide explains that date recognition must be activated before it can be used in the workspace. It also states that dtSearch recognizes valid date formats common in both the US and UK, including DD/MM

/YY and DD/MM/YYYY formats. That means UK dates are supported, but the index must be configured with Date Recognition enabled in order to take advantage of date searching behavior.

This rules out option D because UK date formats are explicitly supported. Option C is incorrect because adding the slash character to the alphabet file is not the documented preparation step for date searching.

Option A is unrelated to dtSearch date-recognition configuration. From an RCA perspective, the important point is that dtSearch can recognize UK-style numeric dates, but only if Date Recognition is enabled before the relevant index build. Therefore, the correct answer is B.

NEW QUESTION # 80

If you add the same document to two different data sources in the same production set, what happens when you stage the production?

- A. No error messages are generated when you stage the production, and the document is produced twice.
- **B. An error message is generated when you stage the production, and you cannot run the production until duplicate documents are removed.**
- C. No error messages are generated when you stage the production, and the document is produced once according to the first data source settings.
- D. An error message is generated when you stage the production, and you can proceed to run the production.

Answer: B

Explanation:

The correct answer is C. Relativity's official production staging documentation states that a staging error occurs when the same document is found in multiple data sources within the same production set. When this happens, Relativity generates an error message identifying the data sources that pulled back the same document and which specific document is duplicated. The documented resolution is to modify the saved searches used as data sources so they no longer return the same document.

This means staging does not simply ignore the duplicate, nor does it produce the document twice or proceed using the first data source's settings. The duplicate condition is treated as a production-stopping issue that must be corrected before the production can successfully continue. From an RCA perspective, this is a core Productions concept because it affects production QC and data-source design. Administrators should ensure that saved searches used as production data sources are mutually exclusive when necessary, especially if different branding, numbering, or production settings apply. During staging, Relativity is validating the integrity of the production inputs, and duplicate documents across data sources are explicitly flagged as errors. Therefore, the correct interpretation is that an error message appears during staging and the production cannot proceed until the duplicate documents are removed from overlapping data sources.

NEW QUESTION # 81

.....

We have been developing our RCA practice engine for many years. We have no doubt about our quality of the RCA exam braindumps. Our experience is definitely what you need. And especially our professional experts have been devoting in this field for over ten years. I believe no one can know the RCA training guide than them. To combine many factors, RCA real exam must be your best choice.

RCA Test Vce Free: <https://www.validtorrent.com/RCA-valid-exam-torrent.html>

Relativity RCA PDF Download It has been certified by people in many different occupations, Relativity RCA PDF Download With the simulated test engine, you can re-practice your test until you are sure to pass it, We are a professional enterprise which RCA exam dumps files can cater the needs of many working employees who take part in exam, According to former customers' experience, you can take advantage of your free time every day to practice RCA Test Vce Free - Relativity Certified Administrator exam study material 20 to 30 hours on average.

You can then view posts only by members of a specific friends list, RCA or send your posts only to a given friends list, Beyond standard LaTeX, It has been certified by people in many different occupations.

RCA PDF Download First-grade Questions Pool Only at ValidTorrent

With the simulated test engine, you can re-practice your test until you are sure to pass it, We are a professional enterprise which RCA Exam Dumps files can cater the needs of many working employees who take part in exam.

According to former customers' experience, you can take RCA Test Vce Free advantage of your free time every day to practice Relativity Certified Administrator exam study material 20 to 30 hours on average.

These have given rise to a new relationship of mutual benefit and win-win between the RCA test torrent: Relativity Certified Administrator and all candidates.
