Authorized Salesforce Plat-Dev-301 Pdf - Test Plat-Dev-301 Question

Though there is an Plat-Dev-301 exam plan for you, but you still want to go out or travel without burden. You should take account of our PDF version of our Plat-Dev-301 learning materials which can be easily printed and convenient to bring with wherever you go.On one hand, the content of our Plat-Dev-301 Exam Dumps in PDF version is also the latest just as the other version. On the other hand, it is more convenient when you want to take notes on the point you have good opinion.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q115-Q120):

NEW QUESTION # 115
A developer creates a Lightning web component to allow a Contact to be quickly entered. However, error messages are not displayed.
Which component should the developer add to the form to display error messages?

- A. lightning-error
- B. apex:messages
- C. aura:messages
- D. lightning-messages

Answer: D

Explanation:

The correct answer is B, lightning-messages. This Lightning Web Components (LWC) service component provides a way to display error messages that are generated during the processing of lightning-input-field components within a lightning-record-edit-form.
Display Error Messages

NEW QUESTION # 116

A developer is writing a Jest test for a Lightning web component that conditionally displays child components based on a user's checkbox selections.
What should the developer do to properly test that the correct components display and hide for each scenario?

- A. Reset the DOM after each test with the after Each() method.
- B. Add a teardown block to reset the DOM after each test.
- C. Create a new describe block for each test.
- D. Create a new jsdom instance for each test.

Answer: A

Explanation:
To ensure that the DOM is clean before each test runs, the developer should use the afterEach() method to reset it. This is part of the setup and teardown process in Jest tests, which helps to avoid state leakage between tests. Reference:
Jest Globals afterEach

NEW QUESTION # 117

An Apex class does not achieve expected code coverage. The testsetup method explicitly calls a method In the Apex class..
How can the developer generate the code coverage?

- A. Verify the user has permissions passing a user into System,.runds().
- B. Add @testvisible to the method in the class the developer is testing.
- C. Call the Apex class method from a testsetup Instead of the testsetup methed.
- D. Use system.assert() in testSetup to verify the values are being returned.

Answer: B

Explanation:
When an Apex class does not achieve the expected code coverage, it suggests that the test methods are not executing parts of the class. The @testvisible annotation can be used to increase code coverage by allowing test methods to access private or protected members of another class. This enables the test method to call methods that may not be directly accessible, but it is not a direct means to generate code coverage. The code coverage is actually achieved when the test methods execute the code within these methods. Therefore, to properly generate code coverage, the developer must ensure that the test methods call the relevant portions of the code that need to be covered. The use of @testvisible can facilitate this process by making otherwise inaccessible code available for testing.
Apex Developer Guide - Testing Best Practices
Apex Developer Guide - @testVisible Annotation

NEW QUESTION # 118

A company has code to update a Request and Request Lines and make a callout to their external ERP system's REST endpoint with the updated records.
The callousUtil.makeRestCallout fails with a "You have uncommitted work pending. Please commit or rollback before calling cut' error. What should be done to address the problem?

- A. Change the callousUtil makeRestCallout to an @InvocsblsMethod method.
- B. Change the CallousUtill .makeRestCallout to an @future method.
- C. Remove the Database. setSavepoint and Database. rollback.

Answer: B

Explanation:
The error occurs because DML operations were performed before a callout. To fix this, the callout should be made from an asynchronous method such as one annotated with @future(callout=true), which allows DML operations to be committed separately

from the callout.
nces: Apex Developer Guide - Making Asynchronous Callouts

NEW QUESTION # 119

A developer created a Lightning web component that uses a lightning-record-edit-form to collect information about Leads. Users complain that they only see one error message at a time about their input when trying to save a Lead record.
What is the recommended approach to perform validations on more than one field, and display multiple error messages simultaneously with minimal JavaScript intervention?

- **A. External JavaScript library**
- B. Try/catch/finally block
- C. Apex trigger
- D. Validation rules

Answer: A

Explanation:
Salesforce validation rules are declarative and can be used to validate more than one field on an object and display multiple error messages. This approach requires minimal JavaScript code and uses Salesforce's built-in validation framework. Reference: Validation Rules

NEW QUESTION # 120

......

No doubt the Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) certification is one of the most challenging certification exams in the market.
