Quiz 2026 AP-201: B2B Commerce for Administrators Accredited Professional – High Pass-Rate Certification Questions

With AP-201 practice materials, you don't need to spend a lot of time and effort on reviewing and preparing. For everyone, time is

precious. Office workers and mothers are very busy at work and home; students may have studies or other things. Using AP-201 Guide questions, you only need to spend a small amount of time to master the core key knowledge, pass the AP-201 exam, and get a certificate.

Salesforce B2B Commerce for Administrators Accredited Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55
An Administrator has automated the rebuild of a store search index. The solution uses a trigger and a custom metadata value. Each time a product record is created or updated it increments a metadata counter value. If the counter value is divisible by 5, then the rebuild search index functionality is started using an API call. The automation has worked until today. In the past 10 minutes, 80 products have been updated. The B2B Store Manager complains that the store search results are out of date. The product changes are missing in the search results.
What could be the cause of this issue?

- A. The automation is triggering the search index rebuild too often. The store search index should not be rebuilt more than five times per hour.
- B. The automation is triggering the search index rebuild too often. The store search index should not be rebuilt more than 10 times per day.
- C. The automation is working as designed. The B2B Store Manager needs to login again to the store to see results of the updated search index.

Answer: A

Explanation:
The issue with the search index not reflecting recent product updates could be due to the automation triggering the search index rebuild too frequently. If the store search index is rebuilt more than five times per hour, as suggested in option (C), it can lead to performance issues and delays in updating the search results. This frequency can overwhelm the system, leading to a queue of rebuild operations that can't be processed in a timely manner, causing the search results to become outdated despite the updates to product records.

NEW QUESTION # 56
Which two types of data are supported by the Multilevel Navigation Menu Component in B2B Commerce?

- A. System Link
- B. External URL
- C. Event
- D. Data Source

Answer: A,B

Explanation:
The Multilevel Navigation Menu Component in B2B Commerce supports System Link (A) and External URL (C) as types of data. System Links are used to navigate within the B2B Commerce application, facilitating a seamless user experience by linking to internal pages or resources. External URLs allow the integration of links to external websites, which can be crucial for providing additional product information, manufacturer details, or external resources. Data Source (B) and Event (D) are not typically supported by the navigation menu component as they serve different purposes in the context of B2B Commerce.

NEW QUESTION # 57
Which two permission sets are needed for a user on the storefront to view other accounts across multiple accounts?

- A. Buyer Manager (or B2B Commerce Super User)
- B. Account Switcher User
- C. Account Delegation User
- D. Buyer (or Commerce User)

Answer: A,B

Explanation:

For a user on the storefront to view other accounts across multiple accounts, the necessary permission sets are C. Account Switcher User, which allows users to switch between different accounts they have access to, and D. Buyer Manager (or B2B Commerce Super User), which provides broader permissions including the ability to manage and view information related to multiple accounts.

NEW QUESTION # 58

What user license is needed at a minimum to deploy B2B Commerce successfully for Buyers and external users?

- A. Full CRM User license
- B. Customer Community Plus License
- C. Customer Community License
- D. Partner Community License

Answer: C

Explanation:
To deploy B2B Commerce successfully for Buyers and external users, the minimum user license needed is D. Customer Community License. This license type is designed for external users to access the community, enabling them to engage with the B2B Commerce store, view products, and make purchases.

NEW QUESTION # 59

An Administrator sets up a new store and imports the product catalog. While verifying the store display, the Administrator notices a "Products" category that the Store Manager asked to not display.
How can the Administrator fix this?

- A. Enable the Hide in Menu attribute.
- B. Disable the Display in Menu attribute.
- C. Enable the Do Not Display in Menu attribute.
- D. Disable the Show in Menu attribute.

Answer: B

Explanation:
To prevent a "Products" category from being displayed as requested by the Store Manager, the Administrator should Disable the Display in Menu attribute (A). This action will remove the category from the storefront navigation menu, ensuring it does not appear to store visitors. This approach allows for flexibility in managing how products and categories are presented on the storefront, aligning with business requirements and preferences. The other options, such as Enable the Do Not Display in Menu attribute (B), Disable the Show in Menu attribute (C), and Enable the Hide in Menu attribute (D), are not standard attributes in Salesforce B2B Commerce for controlling menu display.

NEW QUESTION # 60

......
