NEW QUESTION # 16
What is the primary role of the SAP Business Technology Platform?
(2 correct answers)

- A. To enable application extension with technologies like machine learning and AI
- B. To provide integration with third-party ecosystems
- C. To serve as the underlying technology platform for SAP S/4HANA
- D. To provide a platform for onboarding suppliers

Answer: A,B

Explanation:

SAP Business Technology Platform (SAP BTP) is designed to be the central innovation and integration layer within SAP's cloud strategy. One of its key roles is to provide integration with third-party ecosystems.

BTP offers a comprehensive integration suite that includes API management, data services, event-driven architecture, and over a thousand prebuilt connectors. This enables seamless communication between SAP applications and external systems, supporting end-to-end processes that extend beyond the SAP landscape.

Organizations rely on this capability to unify their heterogeneous IT environments without modifying the SAP core system.

Another primary role of BTP is to enable application extensions enhanced by machine learning, AI, automation, and low-code/no-code development tools. Through services such as SAP Build, SAP AI Core, workflow automation, and analytics, businesses can create intelligent extensions that improve efficiency and innovate rapidly. These extensions run on the platform independently from SAP S/4HANA, ensuring that the core system remains clean, upgradeable, and stable.

Options B and C do not represent the main purpose of BTP. S/4HANA runs on SAP HANA, not BTP, and onboarding suppliers is a procurement-specific capability typically handled by SAP Ariba-not BTP. Thus, integration capabilities and intelligent extensibility are the two correct primary roles.

NEW QUESTION # 17

What does SAP LeanIX use to represent applications and capabilities?

- A. Survey Database
- B. Forms
- C. Fact Sheets
- D. Linked Lists

Answer: C

Explanation:
Fact Sheets are the core building blocks in SAP LeanIX. Each Fact Sheet holds information about a specific entity, such as an application, business capability, interface, or technology component. These structured profiles include lifecycle data, ownership, dependencies, and relationships. Using Fact Sheets ensures a standardized representation of architectural components, enabling transparency and accurate transformation planning.

NEW QUESTION # 18

What is the role of "Joule Agents" in SAP's cloud strategy?

- A. They offer sales and marketing solutions.
- B. They provide interactive customer support.
- C. They orchestrate end-to-end business processes.
- D. They act as customer support agents.

Answer: C

NEW QUESTION # 19

What is one of the primary goals of the RISE with SAP Methodology?

- A. Reduce the number of SAP systems
- B. Drive support automation
- C. Ensure predictable implementation and clean core adherence
- D. Eliminate partner involvement

Answer: C

Explanation:
The RISE with SAP methodology emphasizes delivering transformation projects in a predictable, repeatable, and quality-assured manner. A central focus of this methodology is enforcing clean core principles, which prevent unnecessary modifications and ensure systems remain easy to upgrade and extend. The structured phases, quality gates, and integrated toolchain all support predictable outcomes. The methodology does not aim to reduce system count or eliminate partners; instead, it ensures guided, standardized, and clean implementations.

NEW QUESTION # 20

What are the benefits offered by SAP Cloud ALM for businesses?
(3 correct answers)

- A. It is available to all customers with Enterprise Support Agreement or cloud contract
- B. It supports only cloud implementation scenarios
- C. It reduces TCO of the solution landscape
- D. It supports process mining with plug & gain
- E. It is instantly available for use as a subscription service

Answer: A,C,E

Explanation:

SAP Cloud ALM provides multiple operational and implementation benefits to businesses undergoing transformation. First, it isavailable to all customers who hold an SAP Enterprise Support Agreement or cloud subscription. This means there are no additional licensing fees, making Cloud ALM a highly accessible lifecycle management platform. Its broad availability encourages consistent adoption across organizations of all sizes.

Second, SAP Cloud ALM isinstantly available as a cloud-native subscription service. There is no installation or infrastructure setup required. Customers can begin using Cloud ALM almost immediately after provisioning, accelerating project kickoff and reducing administrative overhead.

Third, one of its major benefits is that itreduces total cost of ownership (TCO)by minimizing on-premise infrastructure requirements and providing standardized, automated tools for monitoring, implementation, testing, and operations. This reduces the need for multiple separate ALM systems and allows customers to centralize lifecycle activities.

Option A is incorrect because process mining with Plug & Gain is a Signavio capability. Option D is incorrect because Cloud ALM supports both cloud and hybrid/on-premise scenarios through integration monitoring and operational support. Therefore, the correct benefits are B, C, and E.
