## Use Real Splunk SPLK-1004 Exam Questions [2026] To Gain Brilliant Result

For most graduates who want to work in influential IT companies, they tend to choose latest Splunk SPLK-1004 vce dumps to prepare the test instead of attending training institution. As a worldwide dumps provider, we will learn about the Latest SPLK-1004 Study Materials and update questions timely to ensure that our candidates get the up-to-date SPLK-1004 pdf torrent and take exam with great confidence.

## Splunk Core Certified Advanced Power User Sample Questions (Q119-Q124):

### NEW QUESTION # 119

How can the inspect button be disabled on a dashboard panel?

- A. Set inspect.link.disabled to 1
- B. Set link.search.disabled to 1
- C. Set link.inspect.visible to 0
- D. Set link.inspectSearch.visible to 0

**Answer: C**

Explanation:

To disable the inspect button on a dashboard panel, set the link.inspect.visible attribute to 0. This hides the button, preventing users from accessing the search inspector for that panel.

### NEW QUESTION # 120

When enabled, what drilldown action is performed when a visualization is clicked in a dashboard?

- A. A search is opened in a new window.
- B. Search results are refreshed for the selected visualization.
- C. A visualization is opened in a new window.
- D. Search results are refreshed for all panels in a dashboard.

**Answer: B**

Explanation:

Comprehensive and Detailed Step by Step Explanation:

When drilldown is enabled in a Splunk dashboard, clicking on a visualization triggers a refresh of the search results for the selected visualization. This allows users to interact with the data and refine the displayed results based on the clicked value.

Here's why this works:

\* Drilldown Behavior: Drilldown actions are configured to dynamically update tokens or filters based on user interactions. When a user clicks on a chart, table, or other visualization, the underlying search query is updated to reflect the selected value.

\* Contextual Updates: The refresh applies only to the selected visualization, ensuring that other panels in the dashboard remain unaffected unless explicitly configured otherwise.

Other options explained:

\* Option A: Incorrect because visualizations are not automatically opened in a new window during drilldown.

\* Option C: Incorrect because drilldown actions typically affect only the selected visualization, not all panels in the dashboard.

\* Option D: Incorrect because a new search window is not opened unless explicitly configured in the drilldown settings.

Example:

```
<drilldown>
<set token="selected_value">$click.value$</set>
</drilldown>
```

In this example, clicking on a value updates the selected\_value token, which can be used to filter the visualization's search results.

### NEW QUESTION # 121

Repeating JSON data structures within one event will be extracted as what type of fields?

- A. Single value
- B. Lexicographical
- C. Multivalue
- D. Mvindex

## Answer: C

Explanation:

When Splunk encounters repeating JSON data structures in an event, they are extracted as multivalue fields. These allow multiple values to be stored under a single field, which is common with arrays in JSON data.

## NEW QUESTION # 122

Where can wildcards be used in the tstats command?

- A. No wildcards can be used with tstats.
- B. In the from clause.
- C. In the by clause.
- D. In the where clause.

## Answer: B

Explanation:

Wildcards can be used in the from clause of the tstats command in Splunk. This allows users to query across multiple datasets or data models that share a common naming pattern.

## NEW QUESTION # 123

Which command processes a template for a set of related fields?

- A. untable
- B. foreach
- C. xseries
- D. bin

## Answer: B

Explanation:

The foreach command applies a processing step to each field in a set of related fields. It allows repetitive operations to be applied to multiple fields in one go, streamlining tasks across several fields.

The foreach command in Splunk is used to process a template for a set of related fields. It allows you to iterate over multiple fields that share a common naming pattern and apply a transformation or operation to each of them. This is particularly useful when you have a series of similarly named fields (e.g., field1, field2, field3) and want to perform the same action on all of them without specifying each field individually.

For example, if you have fields like price1, price2, and price3, and you want to convert their values to integers, you can use the following syntax:
