最新的 CWDP Wi-Fi Design CWDP-305 免費考試真題 (Q50-Q55):

問題 #50

During a customer walkthrough you notice an area of the CAD drawing where it is not accurate. What next step should you take?
Response:

- A. Redraw the portions of the map that have changed.
- **B. Request a new version.**
- C. Request the survey team to do their best to walk where necessary and use the references on the map.
- D. Do not survey that area.

答案： B

問題 #51

During a validation site survey, you realize that the installers mounted some of the APs above the ceiling. They said that this was a request from the building architect due to aesthetics constraints. During the requirements gathering, you weren't advised about any aesthetics constraints from the main stakeholder of the project. What should you do in this case?

- **A. Advise the stakeholder that WLAN performance requirements will not be met and a new design process will be needed to meet the requirements.**
- B. Remove all external antennas and use only the internal antennas to reduce multipath.
- C. Increase the output power on all APs by 6 dB immediately.
- D. Leave it as it is and allow automatic channel management to correct any issues.

答案： A

解題說明：

Comprehensive and Detailed Explanation:

Mounting APs above the ceiling can significantly degrade WLAN performance due to signal attenuation and unpredictable RF propagation. If aesthetic constraints were not communicated during the requirements gathering phase, the design likely does not account for the additional attenuation caused by ceiling materials.

Therefore, it's essential to inform the stakeholder that the current deployment does not meet performance requirements and that a redesign is necessary to address the unforeseen constraints. 問題 #52

What advantage provided by 802.11n and 802.11ac is not usable in 1X1:1 low-end client devices?

- A. Mandatory data rates
- B. Channel bonding
- C. MCS data rates
- **D. Maximal Ratio Combining**

答案： D

問題 #53

You told your customer that multipath fading may be mitigated simply by moving one or both of the receivers antennas a small amount, usually by one to four wavelengths away from its original position. Your customer is prepared to make the change, but does not know the wavelength for

802.11ac.

What is the approximate wavelength of an 802.11ac radio wave?

- A. 15.24 cm (6 inches)
- **B. 5.5 cm (2.16 inches)**
- C. 12 cm (4.72 inches)
- D. 45 cm (17.71 inches)

答案： B

問題 #54

What is a valid 40 MHz channel configuration in the 2.4 GHz ISM band where channels 1-11 are permitted?

- A. 1 (primary), 6 (secondary)
- B. 8 (primary), +1 (secondary)
- C. 4 (primary), +1 (secondary)
- D. 2 (primary), -1 (secondary)

答案： C

解題說明：

In the 2.4 GHz band, 40 MHz channels are formed by bonding two adjacent 20 MHz channels. The primary channel is the one the client uses to initiate communication, and the secondary channel is either above (+1) or below (-1) the primary.

For channel 4 as primary with a +1 secondary offset:

Primary channel: 4 (2.427 GHz)

Secondary channel: 5 (2.432 GHz)

This configuration stays within the allowed channels 1-11.
