Sharing-and-Visibility-Architect Valid Test Forum - Exam Sharing-and-Visibility-Architect Simulator

The dynamic society prods us to make better. Our services on our Sharing-and-Visibility-Architect exam questions are also dependable in after-sales part with employees full of favor and genial attitude towards job. So our services around the Sharing-and-Visibility-Architect training materials are perfect considering the needs of exam candidates all-out. They bravely undertake the duties. Our staff knows our Sharing-and-Visibility-Architect study quiz play the role of panacea in the exam market which aim to bring desirable outcomes to you.

As a Salesforce Certified Sharing and Visibility Architect, you will be able to design and implement sharing and visibility solutions that align with your organization's business requirements. You will learn how to create sharing rules, permission sets, and role hierarchies to control access to data and metadata in Salesforce. You will also be able to design and implement complex security models that provide granular control over data access based on user roles and profiles.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q51-Q56):

NEW QUESTION # 51

Besides their own team accounts, sales managers at Universal Containers need to have READ access to all accounts of the same segment in other countries. Role hierarchy was implemented accordingly (based on countries), but a sales manager in the US is complaining that he cannot view account records of the same segment in Canada. What should be done to grant access in a proper way?

- A. Change the role hierarchy and put all of the sales managers in the US and Canada in the same role.

- **B. Create an owner-based sharing rule to grant access to account records that have the same segment to all sales manager roles.**
- C. Create criteria-based sharing rules to grant access to account records that have the same segment to all sales manager roles.
- D. Owner-Based Sharing Rules An owner-based sharing rule opens access to records owned by certain users. For example, a
- E. Create a public group and include all accounts of the same segment and grant access through a permission set.

Answer: B

Explanation:

company's sales managers need to see opportunities owned by sales managers in a different region. The U.S. sales manager could give the APAC sales manager access to the opportunities owned by the U.S. team using owner-based sharing.

NEW QUESTION # 52

Universal Containers has just deployed a change to its role hierarchy. A manager is reporting that their staff can now see Accounts that they do not own and should not have access to. How should the Architect troubleshoot?

- A. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- **B. While logged in as the one of the Staff members, navigate to a sample account and use the Sharing button to determine who has access.**
- C. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- D. While logged in as the one of the Staff members, navigate to their user record and inspect their profile and role membership.

Answer: B

Explanation:

Explanation

To troubleshoot why staff members can see accounts that they do not own and should not have access to after a change in the role hierarchy, the architect should log in as one of the staff members, navigate to a sample account, and use the sharing button to determine who has access. The sharing button shows all the reasons why a user has access to a record, such as role hierarchy, sharing rules, manual sharing, teams, etc. The architect can then identify which sharing mechanism is causing the issue and fix it accordingly

NEW QUESTION # 53

Universal Containers would like to control access to records and objects according to the following business requirements:* Sales users can view all Account records but only edit their own records.

* Sales managers view all Account records but only edit records of the team.

* Service users can view all Account records that are not marked with a RecordType of Prospect.

Which organization-wide default configuration should a Salesforce architect recommend to fulfill these requirements?

- A. Public Read/Transfer
- **B. Public Read Only**
- C. Public Read Write
- D. Private

Answer: B

Explanation:

Explanation

Public Read Only is the best organization-wide default configuration to fulfill the requirements. Public Read Only means that all users can view all records, but only the owners and those above them in the role hierarchy can edit them. This matches the requirements for sales users and sales managers. For service users, a record type-based sharing rule can be created to restrict their access to accounts with a RecordType of Prospect.

Public Read Write, Private, and Public Read/Transfer are not suitable configurations for the requirements.

NEW QUESTION # 54

Universal Containers (UC) implemented Sales Cloud and requested that only certain branch staff trained to sell high risk products can create opportunities for high risk products.

In which two ways can an Architect allow only specific branch staff to sell high risk products?

Choose 2 answers

- A. Set Price Book Organization Wide Default to View Only and share the price book (High Risk) with the trained staff.
- B. Configure Price Book Organization wide default to No Access.
- C. Share (High Risk) price book with the trained staff via manual sharing.
- D. Share (High Risk) price book with the trained staff via sharing rule.

Answer: A,C

Explanation:

Explanation

Price books are a way to store different prices for products that can be added to opportunities. Price books can have different organization-wide defaults (OWD) settings that control the baseline level of access for users. To allow only specific branch staff to sell high risk products, the architect can recommend setting the price book OWD to View Only and sharing the high risk price book with the trained staff via manual sharing or sharing rules. Manual sharing allows the owner or anyone with Full Access to a record to share it with another user or group of users. Sharing rules allow the admin to automatically grant access to records based on certain criteria.

Therefore, the answer A and C are correct and the other options are incorrect.

NEW QUESTION # 55

Universal Containers has implemented Customer Community with Customer Community Plus licenses for its distributors. Some distributors requested granting specific community users (agents) to view cases submitted by other agents of the same distributor. Which feature only supports these requirements?

- A. Permission set to grant community admin permission
- B. Delegate external user
- C. Partner super user

Answer: C

Explanation:

The Partner Super User feature allows certain community users to access records owned by other users within the same account. This feature is ideal for distributors needing some agents to view cases submitted by others within their organization. It provides broader access to records that are normally restricted by default sharing rules while ensuring the access scope remains confined to users linked by the same account.

* Option A: Granting community admin permission through permission sets is not supported for community users; this is an admin-level feature.

* Option B: Delegating external users allows managing other users, but it doesn't meet the requirement to share case visibility among users of the same account.

* Option C (Correct): Partner Super User enables the required sharing while adhering to the community's sharing model.

:

Partner Super User Access
