## Palo Alto Networks Cloud Security Professional Sample Questions (Q255-Q260):

### NEW QUESTION # 255

Which options show the steps required to upgrade Console when using projects?

- A. Upgrade all Supervisor Consoles Upgrade Central Console
- B. Upgrade Central Console Upgrade Central Console Defenders
- C. Upgrade Central Console Upgrade all Supervisor Consoles
- D. Upgrade Defender Upgrade Central Console Upgrade Supervisor Consoles

**Answer: A**

Explanation:

When you have one or more tenant or scale Projects, upgrade all Supervisors before upgrading the Central Console.

#### NEW QUESTION # 256

A security team has a requirement to ensure the environment is scanned for vulnerabilities. What are three options for configuring vulnerability policies? (Choose three.)

- A. customize message on blocked requests
- B. output verbosity for blocked requests
- C. apply policy only when vendor fix is available
- D. individual grace periods for each severity level
- E. individual actions based on package type

**Answer: C,D,E**

Explanation:

[https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/vulnerability\\_management/vuln\\_management\\_rules](https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/vulnerability_management/vuln_management_rules)

Configuring vulnerability policies within Prisma Cloud involves several options that cater to different aspects of vulnerability management and policy enforcement. Options A, C, and D are valid configurations for vulnerability policies:

A). Individual actions based on package type allow for tailored responses to vulnerabilities found in specific types of software packages, enabling more granular control over the remediation process.

C). Applying policies only when a vendor fix is available helps prioritize the remediation of vulnerabilities for which a patch or update has been released by the software vendor, ensuring efficient use of resources in addressing the most actionable security issues.

D). Setting individual grace periods for each severity level allows organizations to define different time frames for addressing vulnerabilities based on their severity, enabling a prioritized and risk-based approach to vulnerability management.

These configurations support a comprehensive vulnerability management strategy by allowing customization and prioritization based on the nature of the vulnerability, the availability of fixes, and the risk level associated with each vulnerability.

#### NEW QUESTION # 257

#### NEW QUESTION # 258

Which two statements explain differences between build and run config policies? (Choose two.)

- A. Build policies allow checking for security misconfigurations in the IaC templates and ensure these issues do not get into production.
- B. Run and Network policies belong to the configuration policy set.
- C. Run policies monitor resources and check for potential issues after these cloud resources are deployed.
- D. Run policies monitor network activities in the environment and check for potential issues during runtime.

**Answer: A,C**

Explanation:

The Run policies monitor resources and check for potential issues once these cloud resources are deployed. Build policies enable you to check for security misconfigurations in the IaC templates and ensure that these issues do not make their way into production.

<https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/create-a-policy>

\* B. Build policies: These are designed to identify insecure configurations in your Infrastructure as Code (IaC) templates, such as AWS CloudFormation, HashiCorp Terraform, and Kubernetes App manifests.

The goal of build policies is to detect security issues early in the development process, before the actual resources are deployed in

runtime environments. This helps ensure that security issues are identified and remediated before they can affect production1.

\* D. Run policies: These policies are focused on monitoring the deployed cloud resources and checking for potential issues during their operation. Run policies are essential for ongoing security and compliance in the production environment, as they provide visibility into the actual state of resources and their activities1.

Run and Network policies (A) are indeed part of the configuration policy set, but they do not highlight the difference between build and run policies. Similarly, while Run policies do monitor network activities, this statement does not contrast them with Build policies.

### NEW QUESTION # 259

A customer has multiple violations in the environment including:

User namespace is enabled

An LDAP server is enabled

SSH root is enabled

Which section of Console should the administrator use to review these findings?

- **A. Compliance**
- B. Radar
- C. Manage
- D. Vulnerabilities

**Answer: A**

Explanation:

The correct section of the Console that the administrator should use to review findings such as "User namespace is enabled", "An LDAP server is enabled", and "SSH root is enabled" is "Compliance".

The "Compliance" section in CSPM tools like Prisma Cloud provides an overview of the current compliance posture against various regulatory standards and best practices. It can help identify configurations that do not adhere to best practices or that may violate compliance requirements, such as enabling the user namespace, which could be a security risk, or having an LDAP server and SSH root enabled, which may not comply with certain security standards.

Reference to the use of the "Compliance" section can be found in CSPM documentation, where it details how compliance checks are used to assess the security and configuration of cloud resources against established benchmarks and standards, allowing organizations to maintain compliance and improve their security posture.

### NEW QUESTION # 260

.....

CloudSec-Pro study material applies to all types of candidates. Buying a set of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require users to have a lot of study time, which is difficult for office workers. However, CloudSec-Pro Study Material is to help students improve their test scores by improving their learning efficiency. Therefore, users can pass exams with very little learning time.
