The Cisco Secure Email Gateway is LDAP integrated and all employee accounts are in the group "Employees". Which filter rule configuration provides the desired outcome?

- A. `if(mail-from-group == 'Employees ') and (body-size > 100M) {bounce();}`

- C. `if(' mail-from-group != Employees ') and (body-size > 100M) {drop();}`
- D. `if(mail-from-group != 'Employees ') and (body-size > 100M) {drop();}`

Answer: B

NEW QUESTION # 113

Which functionality is impacted if the assigned certificate under one of the IP interfaces is modified?

- A. traffic between the Cisco Secure Email Gateway and the LDAP server
- **B. HTTPS traffic when connecting to the web user interface of the Cisco Secure Email Gateway**
- C. emails being received by the Cisco Secure Email Gateway
- D. emails being delivered from the Cisco Secure Email Gateway

Answer: B

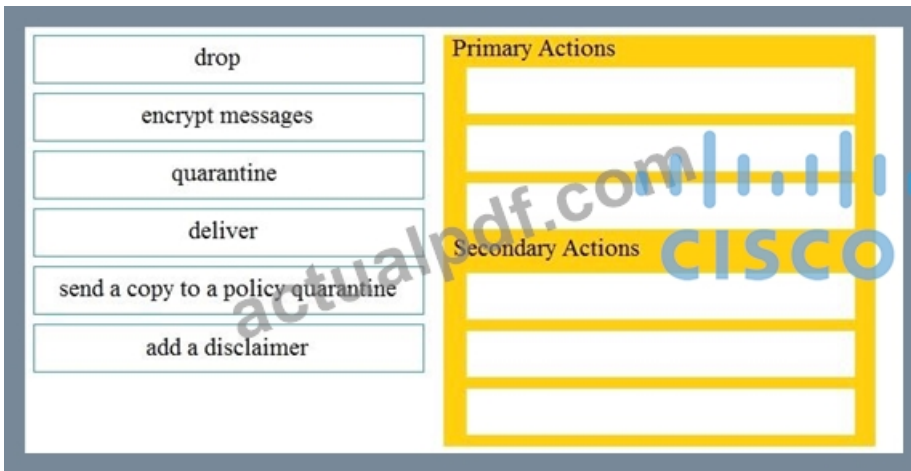

Explanation:

If the assigned certificate under one of the IP interfaces is modified, then the HTTPS traffic when connecting to the web user interface of the Cisco Secure Email Gateway will be impacted. The administrator must ensure that the certificate is valid and trusted by the browser or client that is used to access the web user interface.

Otherwise, the connection may fail or generate a warning message. References : [Cisco Secure Email Gateway Administrator Guide - Configuring Certificates]

NEW QUESTION # 115

An administrator has created a content filter to quarantine all messages that result in an SPF hardfail to review the messages and determine whether a trusted partner has accidentally misconfigured the DNS settings. The administrator sets the policy quarantine to release the messages after 24 hours, allowing time to review while not interrupting business.

Which additional option should be used to help the end users be aware of the elevated risk of interacting with these messages?

- A. Strip Attachments
- B. Notify Sender
- C. Notify Recipient
- **D. Modify Subject**

Answer: D

Explanation:

Modify Subject is an additional option that should be used to help the end users be aware of the elevated risk of interacting with these messages. Modify Subject allows the administrator to add a prefix or suffix to the message subject, such as "[SPF Fail]", to indicate that the message has failed the SPF verification and may be fraudulent or spoofed.

The other options are not valid additional options to help the end users be aware of the elevated risk of interacting with these messages, because they do not affect the message subject or provide any warning to the end users.
