

JN0-481 New Practice Questions & Valid Test JN0-481 Vce Free

2026 Latest ValidDumps JN0-481 PDF Dumps and JN0-481 Exam Engine Free Share: <https://drive.google.com/open?id=1PEc3qTxNGjyhF70Vo17p3pBHbrg9buul>

We offer you free update for one year after you purchase JN0-481 study guide from us, namely, in the following year, you can get the update version for free. And our system will automatically send the latest version to your email address. Moreover, JN0-481 exam dumps of us are compiled by experienced experts of the field, and they are quite familiar with dynamics of the exam center, therefore the quality and accuracy of the JN0-481 Study Guide can be guaranteed. You just need to choose us, and we will help you pass the exam successfully.

For candidates who are going to buy JN0-481 learning materials online, they may pay more attention to that money safety. We apply international recognition third party for the payment, and therefore your account and money safety can be guaranteed if you choose JN0-481 exam materials from us. In addition, in order to build up your confidence for JN0-481 Exam Dumps, we are pass guarantee and money back guarantee. If you fail to pass the exam in your first attempt, we will give you full refund and no other questions will be asked. You give us trust, and we help you pass the exam successfully.

Juniper JN0-481 Questions - Pass Exam With Ease (2026)

Our excellent JN0-481 study materials beckon exam candidates around the world with their attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our JN0-481 actual exam is the best. Our effort in building the content of our JN0-481 Practice Questions lead to the development of practice materials and strengthen their perfection. So our JN0-481 training prep is definitely making your review more durable.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which two statements are correct about the graph query output shown in the exhibit? (Choose two.)

□

- A. The interface has tags assigned to it.
- B. The output shows a LAG connection.
- C. The interface has an IP address assigned to it.
- D. The switch in the output is a Juniper device.

Answer: B,D

Explanation:

The graph query output shown in the exhibit is a JSON representation of an interface node and its properties in the Apstra graph

database. Based on the output, we can infer the following statements:

The output shows a LAG connection. This is true because the interface node has a property called `lag_mode` which is set to `lacp_active`, indicating that the interface is part of a link aggregation group (LAG) that uses the Link Aggregation Control Protocol (LACP) to negotiate the link state and parameters.

The switch in the output is a Juniper device. This is true because the interface node has a property called `if_name` which is set to `ae`, indicating that the interface name follows the Juniper naming convention for aggregated Ethernet interfaces.

The interface has an IP address assigned to it. This is false because the interface node has properties called `ipv4_addr` and `ipv6_addr` which are both set to null, indicating that the interface does not have any IPv4 or IPv6 address configured.

The interface has tags assigned to it. This is false because the interface node has a property called `tags` which is set to null, indicating that the interface does not have any tags associated with it.

NEW QUESTION # 22

In the Juniper Apstra design phase, which object dictates port count, port speed, and how the ports would be used?

- A. network devices
- B. logical devices
- C. rack type
- D. interface map

Answer: D

Explanation:

Interface maps are objects that map interfaces between logical devices and physical hardware devices in the Juniper Apstra design phase. They dictate port count, port speed, and how the ports would be used for achieving the intended network configuration rendering. Interface maps also allow you to select device ports, transformations, and interfaces, provision breakout ports, and disable unused ports.

NEW QUESTION # 23

Which statement is correct about the Juniper Apstra Rendered configuration?

- A. It is built at commit time and stored in a MySQL database.
- B. It is rendered from the graph database and stored locally.
- C. It is dynamically tendered at commit time.
- D. It is stored in a NoSQL database and incrementally updated.

Answer: C

Explanation:

The Juniper Apstra Rendered configuration is the configuration that is generated from the staged blueprint and applied to the devices in the network. The Rendered configuration is dynamically rendered at commit time, which means that it is created on the fly based on the latest changes and validations in the blueprint. The Rendered configuration is not stored in any database, but it can be viewed in the Apstra UI or downloaded as a file. The Rendered configuration reflects the desired state of the network as defined by the intent of the blueprint.

NEW QUESTION # 24

The 10.100.0.0/16 route is being advertised into your BGP IP fabric. ECMP load balancing has been properly enabled on all devices.

In this scenario, how many routes will the leaf device in AS 65000 receive for the 10.100.0.0/16 prefix?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The leaf device in AS 65000 will receive three routes for the 10.100.0.0/16 prefix, one from each spine device in AS 65001, AS

65002, and AS 65003. Since ECMP load balancing is enabled, the leaf device will install all three routes in its routing table and distribute the traffic among them.

NEW QUESTION # 25

Referring to the exhibit, how many rack types are used in the staged blueprint?

- A. six
- **B. two**
- C. seven
- D. three

Answer: B

Explanation:

Referring to the exhibit, the image shows the Racks table under the Staged menu in the Juniper Apstra UI. The Racks table displays the details of the racks that are used in the blueprint, such as the name, rack type, and date. The rack type is a resource that defines the type and number of leaf devices, access switches, and/or generic systems that are used in rack builds. The image shows seven racks in the table, but only two rack types: BorderLeaf and ServerRack.

NEW QUESTION # 26

.....

Some sites provide Juniper JN0-481 Exam study materials on the Internet, but they do not have any reliable guarantee. Let me be clear here a core value problem of ValidDumps. All Juniper exams are very important. In this era of rapid development of information technology, ValidDumps just questions provided by one of them. Why do most people choose ValidDumps? This is because the exam information provided by ValidDumps will certainly be able to help you pass the exam. Why? Because it provides the most up-to-date information, which is the majority of candidates proved by practice.
