Free PDF 2026 Juniper The Best Vce JN0-253 Files

Since it was founded, our Pass4sureCert has more and more perfect system, more rich questiondumps, more payment security, and better customer service. Now the JN0-253 exam dumps provided by Pass4sureCert have been recognized by masses of customers, but we will not stop the service after you buy. We will inform you at the first time once the JN0-253 Exam software updates, and if you can't fail the JN0-253 exam we will full refund to you and we are responsible for your loss.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q62-Q67):

NEW QUESTION # 62

Which two wired elements would be configured using an organization-level template? (Choose two.)

- A. DNS settings
- B. role
- C. host name
- D. VLAN

Answer: A,D

Explanation:

Two wired elements configured using an organization-level template in Juniper Mist are VLAN and DNS settings. Organization-level templates are designed to standardize and propagate common settings across all switches within an organization. As per official guides: "These templates can include VLANs and well-known services such as DNS (Domain Name System) that can be used across all devices within a site." VLAN and DNS settings are defined once at the organization (or switch group) template and automatically inherited by all devices, ensuring consistency. Host name and role are set at an individual switch level, not globally via templates.

NEW QUESTION # 63

Which two statements are correct about Juniper Mist Wired Assurance ZTP? (Choose two.)

- A. The cloud-ready Juniper switch must either boot from the factory-default state or you can issue the request system zeroize Junos command to reset the configuration.
- B. The technician must have console access to the switch during the initial setup.
- C. All legacy Juniper switch models are supported.
- D. The switch must be running a supported Junos version for Juniper Mist Wired Assurance.

Answer: A,D

Explanation:

Supported Junos Version: For Juniper Mist Wired Assurance to function correctly, the switch must be running a supported Junos version. This ensures compatibility with Mist's cloud management and AI capabilities.

Factory-Default State or Zeroize Command: The switch must boot from a factory-default state, or you can use the request system zeroize command to reset its configuration. This is essential for seamless onboarding and auto-provisioning.

NEW QUESTION # 64

You want to troubleshoot a wireless client that is no longer connected to a Mist AP.

Which area within the Mist GUI would you use?

- A. Monitor -> Service Levels -> Insights
- B. Clients -> App Clients
- C. Clients -> WiFi Clients
- D. Organization -> Audit Logs

Answer: C

Explanation:

To troubleshoot a wireless client that is no longer connected to a Mist AP, you would navigate to the "Clients" section within the Mist GUI and select "WIFI Clients." This area provides detailed information about all wireless clients that have connected to the Mist APs, including their connection history, performance metrics, and any issues encountered. By examining the data available in the WIFI Clients section, network administrators can identify the root cause of connectivity problems and take appropriate actions to resolve them.

NEW QUESTION # 65

Which two statements correctly describe Mist claim codes and activation codes? (Choose two.)

- A. Claim codes may be used to claim multiple APs at once.
- B. An activation code is printed on a sticker on the AP.
- C. Claim codes may be used to claim only one AP.
- D. Activation codes may be used to claim multiple APs at once.

Answer: C,D

Explanation:

Claim Codes: Claim codes are unique to each AP and can be used to claim only one AP at a time. This ensures each device is correctly registered and managed individually within the Mist system.

Activation Codes: Activation codes can be used to claim multiple APs at once, facilitating bulk onboarding and simplifying the setup process for large deployments.

NEW QUESTION # 66

When viewing the LATEST UPDATES on the Marvis Actions page, you see an action labeled AI VALIDATED.

What does this status mean?

- A. The issue was identified and resolved entirely by Marvis.
- B. The issue was marked resolved by an administrator.
- C. The issue is resolved but was not manually marked resolved.
- D. The issue is unresolved.

Answer: A

Explanation:

In the Juniper Mist Marvis Actions dashboard, issues and recommendations are displayed with status labels indicating their progress and resolution method. One of these statuses is AI VALIDATED, which signifies that the issue was automatically detected, diagnosed, and resolved by Marvis AI without requiring manual intervention.

According to the Juniper Mist Marvis Virtual Network Assistant Operations Guide:

"AI VALIDATED indicates that Marvis has confirmed and resolved a network issue autonomously using AI- driven automation and telemetry correlation." This means Marvis performed the full troubleshooting cycle- identifying the anomaly, validating its cause, and confirming resolution-based on continuous monitoring and real-time network analytics.

Other statuses include:

- * UNRESOLVED: Issue is ongoing and needs attention.
- * RESOLVED: Marked manually by an administrator after resolution.
- * AI VALIDATED: Confirmed and closed automatically by Marvis AI.

Therefore, the correct answer is A. The issue was identified and resolved entirely by Marvis.
