To earn such a material, you can spend some time to study our CIS-Discovery study torrent. No study can be done successfully without a specific goal and a powerful drive, and here to earn a better living by getting promotion is a good one.

ServiceNow CIS-Discovery Certification Exam evaluates candidates in three different categories: Discovery Configuration and Functionality, Discovery Implementation and Troubleshooting, and Discovery Integrations. CIS-Discovery exam focuses on testing the ability of applicants to configure and manage the Discovery application, identify the resources and their dependencies, analyze the changes and track the progress using ServiceNow Discovery. Additionally, candidates would need to have knowledge about integrating ServiceNow Discovery with other ServiceNow applications and third-party tools. These categories cover essential areas that IT professionals need to know to implement ServiceNow Discovery effectively in their day-to-day work.

ServiceNow is a renowned software company that provides a suite of cloud-based solutions that modernize and simplify the operations of businesses. The ServiceNow platform is widely regarded as one of the most competent IT service management platforms as it empowers IT teams to manage a wide range of services ranging from infrastructure to applications. Recently, the company launched the Certified Implementation Specialist (CIS) – Discovery Certification Exam for IT professionals who desire to stand out in their fields.

## ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q78-Q83):

### NEW QUESTION # 78

SNMP Credentials require which of the following?

- A. read community strings
- B. port 135 access
- C. write community strings
- D. usernames

**Answer: A**

Explanation:

SNMP credentials are used by Discovery to communicate with devices that support the Simple Network Management Protocol (SNMP). SNMP credentials do not include a user name, just a password, called the community string. The default read-only community string for many SNMP devices is public, and Discovery will try that automatically. Enter the appropriate SNMP credentials if they differ from the public community string.

### NEW QUESTION # 79

When installing a MID Server on a Windows platform, which right must be associated when creating a Service Account?

- A. Log on as service
- B. Local Admin
- C. MID Server User Role
- D. Domain Admin

**Answer: A**

Explanation:

The Service Account for the MID Server must have the Log on as service right on the Windows platform.

This right allows the MID Server to run as a Windows service and communicate with the ServiceNow instance. The Service Account does not need to have local or domain admin rights, as these are not required for the MID Server functionality. The MID Server User Role is a role on the ServiceNow instance, not on the Windows platform, and it is used to control the access and permissions of the MID Server on the instance.

:

Correcting MID Server Windows service account user and permissions

What is a ServiceNow MID Server and how does it work?

Configure Windows MID Server service credentials

### NEW QUESTION # 80

Where in ServiceNow can one see the probe results posted by the MidServer.

Response:

- A. System Logs
- B. Event Queue
- C. ECC Queue

Answer: C

### NEW QUESTION # 81

Which choice best describes a Functionality Definition?

- A. Defines what protocols to detect from within a Behavior.
- B. Defines what CI identifiers to use.
- C. Defines what Behavior to use from a Discovery Schedule.
- D. Defines the IP addresses to discover.

Answer: A

### NEW QUESTION # 82

Which of the following does the ECC Queue provide? (Choose two.)

- A. A connected flow of probe and sensor activity.
- B. The process responsible for defining, analyzing, planning, measuring, and improving all aspects of the availability of IT services.
- C. Login credentials for the MID Server host.
- D. The actual XML payload that is sent to or from an instance.

Answer: A,D

Explanation:

The ECC Queue is the normal connection point between an instance and other systems that integrate with ServiceNow, such as MID Servers<sup>1</sup>. The ECC Queue displays input and output messages from and to MID Servers<sup>2</sup>. The actual XML payload that is sent to or from an instance is stored in the ECC Queue<sup>3</sup>. The ECC Queue also provides a connected flow of probe and sensor activity, as probes are sent from the instance to the MID Server, and sensors are sent from the MID Server to the instance<sup>2</sup>.

:

1: ServiceNow Discovery Overview

2: ECC Queue Processing and Debugging, with "Discovery - Sensors" used as an example

3: Manage ECC Queue content for a MID Server
