AD0-E724 Exam New Exam Format & Authoritative New Guide AD0-E724 Files Pass Success

By Finishing the Commerce Developer Professional exam, you will save your work and even change to another better door way. By and by, it is not difficult to do Adobe AD0-E724 dumps as you would confront two or three inconveniences during the trip. By utilizing Adobe AD0-E724 Dumps, it is especially simple to appear at your goal. We can equip you with explicit tips that could show you the fundamental method for doing battling the difficulties and draw a definite guide toward your objective for the Commerce Developer Professional exam.

Adobe Commerce Developer Professional Sample Questions (Q65-Q70):

NEW QUESTION # 65

An Adobe Commerce developer has added an iframe and included a JavaScript library from an external domain to the website. After that, they found the following error in the console:

Refused to frame [URL] because it violates the Content Security Policy directive.
In order to fix this error, what would be the correct policy ids to add to the csp_whitelist.xml file?

- A. default-src and object-src
- B. frame-ancestors and connect-src
- **C. frame-src and script-src**

Answer: C

Explanation:

The Content Security Policy (CSP) in Adobe Commerce (Magento) restricts the types of content that can be loaded on a page to protect against malicious attacks, such as cross-site scripting (XSS). When an iframe is added, and a JavaScript library is loaded from an external source, these resources must be whitelisted explicitly using the csp_whitelist.xml file.

In this specific case:

* The frame-src directive controls the sources from which iframes can be embedded. Since the developer is embedding an iframe from an external domain, they need to whitelist this domain for frame-src.

* The script-src directive controls the sources from which JavaScript files can be loaded. The external JavaScript library must be whitelisted under script-src to allow it to execute.

Therefore, the correct policy IDs to whitelist are:

* frame-src: to allow the embedding of content from an external domain in an iframe.

* script-src: to allow the loading and execution of JavaScript files from the external domain.

Here's how to update the csp_whitelist.xml file with the correct directives:

```
<?xml version="1.0"?>
<whitelist
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:
magento:module:Magento_Csp:etc/csp_whitelist.xsd"
>
<policy id="frame-src">
<values>
<value id="your-external-domain.com"/>
</values>
</policy>
<policy id="script-src">
<values>
<value id="your-external-domain.com"/>
</values>
</policy>
</whitelist>
```

Replace your-external-domain.com with the actual domain of the external iframe and JavaScript source.

NEW QUESTION # 66

Which two attribute input types can be used for a date? (Choose two.)

- **A. Date and Time**
- B. Timezone
- C. Schedule
- **D. Date**

Answer: A,D

Explanation:

The two attribute input types that can be used for a date are Date and Time and Date. These input types allow the user to select a date or a date and time from a calendar widget.

The Timezone and Schedule input types do not exist in Adobe Commerce.

Verified References: [Adobe Commerce User Guide - Create a product attribute] In Magento, attribute input types define the type of data an attribute can hold and how it should be inputted or displayed in the UI. For dates, Magento provides specific input types to handle date-related data efficiently.

The "Date" input type is used for attributes that require only a date, without a time component, suitable for birthdays, anniversaries, or any date-specific information. The "Date and Time" input type, on the other hand, includes both date and time components, ideal for events, promotions, or any scenario where the time of day is relevant. These input types ensure data consistency and provide a user-friendly interface for selecting dates and times.

NEW QUESTION # 67

Which Cloud CLI for Commerce command can be used to quickly view a specific log file for an Adobe Commerce Cloud project?

- A. `magento-cloud logs:show`
- B. `magento-cloud log`
- C. `magento-cloud logs:list`

Answer: A

Explanation:

The Cloud CLI for Commerce command that can be used to quickly view a specific log file for an Adobe Commerce Cloud project is `magento-cloud logs:show`. This command allows developers to view log files directly from the command line, which is useful for debugging and monitoring the application's state without needing to access the file system directly.

NEW QUESTION # 68

An Adobe Commerce developer successfully added a new column to the customers grid. This column needs the data to be formatted before showing its content in the grid.

According to best practices, how would the developer add the custom logic to render the column?

- A. 1. Create a custom class extending `\Magento\Ui\Component\Listing\Columns\Column`.
2. Add the custom logic within the `prepareDataSource` method.
3. Add an attribute class to the column node within the module's `customer_listing.xml`.
- B. 1. Override the `\Magento\Customer\Ui\Component\DataProvider` Class using a preference.
2. Override the `getData()` method and add the custom logic per row.
- C. 1. Create an after plugin for `\Magento\Ui\Component\Listing\Columns\Column::prepareColumn()`.
2. Add the custom logic within the `afterPrepareColumn` method.

Answer: A

Explanation:

The best practice to add custom logic for data formatting in a grid column is to create a new class extending `\Magento\Ui\Component\Listing\Columns\Column`. The `prepareDataSource` method is designed for processing and formatting data before it is displayed in the UI component.

* Using `prepareDataSource` in a Custom Column Class:

* By extending `\Magento\Ui\Component\Listing\Columns\Column`, you gain access to the `prepareDataSource` method, where you can manipulate data as needed.

* Adding a custom class allows for reusability and modular code, which is in line with Magento's architecture.

* Why Option B is Correct:

* This option uses Magento's UI component structure properly, focusing on the intended class and method for grid data manipulation. Option A involves an unnecessary plugin, and Option C with `DataProvider` preference is generally discouraged for simple UI modifications.

* Implementation Steps:

* Extend the `Column` class and add your logic in the `prepareDataSource` method.

* Then, in your `customer_listing.xml`, reference this class within the `<column>` node using the class attribute.

NEW QUESTION # 69

Which two actions will the developer need to take to translate strings added in JS files? (Choose two.)

- A. `translate('<string>');`
- B. `$ trans(,<string>')`
- C. `define ([
'jquery,`

- `'mage/translate'`
`), function ($, $t) {."`
- `D. $.mage.__('<string>');`

Answer: A,C

Explanation:

To translate strings added in JavaScript files in Adobe Commerce, developers need to use the `mage/translate` RequireJS module along with the `$.mage.__('<string>')` function to mark strings for translation. This approach ensures that any text strings embedded within JavaScript code can be localized according to the store's current locale, providing a consistent and accessible user experience across different languages and regions. The `mage/translate` module and the `$.mage.__()` function work together to retrieve the corresponding translated strings from Magento's translation dictionaries, dynamically replacing the original text in the JavaScript code with the appropriate translations.

NEW QUESTION # 70

.....

Our experts have carefully researched each part of the test syllabus of the AD0-E724 guide materials. Then they compile new questions and answers of the study materials according to the new knowledge parts. At last, they reorganize the AD0-E724 learning questions and issue the new version of the study materials. Once the newest test syllabus of the AD0-E724 Exam appear on the official website, our staff will quickly analyze them and send you the updated version. So our AD0-E724 guide materials deserve your investment.
