Salesforce Marketing Cloud Intelligence Accredited Professional Sample Questions (Q18-Q23):

NEW QUESTION # 18

A client's data consists of three data streams as follows:

Data Stream A:

- * The data streams should be linked together through a parent-child relationship.
 - * Out of the three data streams, Data Stream C is considered the source of truth for both the dimensions and measurements.
- How should the "Override Media Buy Hierarchies" checkbox be set in order to meet the client's requirements?

- A. It should not be checked in any of the three Data Streams.
- B. It should be checked in Data Stream A
- **C. It should be checked in Data Stream C**
- D. It should be checked in Data Stream B

Answer: C

Explanation:

If Data Stream C is the source of truth, the "Override Media Buy Hierarchies" checkbox should be checked for Data Stream C. This means that the hierarchy defined within Data Stream C will take precedence over any other media buy hierarchies present in Data Streams A or B. By doing so, it enforces that the hierarchy from the source of truth (Data Stream C) is used throughout the dataset, maintaining the integrity of the hierarchical relationships as defined by the most reliable data source.

NEW QUESTION # 19

Which three statements describe Overarching Entities? 03m 23s

- **A. Some overarching entities hold a Many-to-Many relationship with the main entity, and others hold a One-to-Many relationship with it.**
- **B. The values of these entities are stored at the workspace level, rather than the data stream level**
- **C. When needed, these entities can act as a main entity, replacing the original one.**
- D. These are mappable dimensions that are present in each and every dataset type
- E. Once the data streams in which Custom Classification values were mapped are deleted, their data is deleted.

Answer: A,B,C

Explanation:

Overarching Entities in Salesforce Marketing Cloud Intelligence are designed to provide a high level of data organization that spans across multiple data streams. The key points about Overarching Entities are:

B . Relationship Types: Overarching entities can have either a Many-to-Many or One-to-Many relationship with the main entity, which allows for flexible data modeling and relationship definitions based on the nature of the data and how it should be analyzed and reported.

C . Acting as Main Entity: They can serve as a main entity in certain situations, enabling a shift in perspective for data analysis. This can be particularly useful when there is a need to view data from a different dimension that is more aligned with business requirements.

E . Storage Level: The values of these entities are not tied to any single data stream but are maintained at a workspace level, ensuring that they can be applied consistently across different datasets, which is critical for maintaining data integrity and ensuring that classifications are applied uniformly.

NEW QUESTION # 20

Which two statements are correct regarding the Parent-Child configuration?

- A. Parent-Child allows sharing both dimensions and measurements
- B. A Parent-Child cannot be configured between an Ads data stream type and a Conversion Tag one.
- **C. Parent-Child configurations can cause performances issues**
- **D. Parent-Child links different tables based on shared key values**

Answer: C,D

Explanation:

Parent-Child configurations in Marketing Cloud Intelligence are used to link different data tables based on shared key values, allowing for the relational organization of data across various streams. While this setup enhances data analysis and reporting by maintaining logical relationships between parent and child tables, it can also introduce performance issues. The complexity increases

with the number of relationships and the volume of data, potentially slowing down query processing and data manipulation. Additionally, Parent-Child configurations facilitate the sharing of dimensions and measurements across linked tables, enhancing the data's usability without duplicating it.

NEW QUESTION # 21

A technical architect is provided with the logic and Opportunity file shown below:

The opportunity status logic is as follows:

For the opportunity stages "Interest", "Confirmed Interest" and "Registered", the status should be "Open".

For the opportunity stage "Closed", the opportunity status should be closed Otherwise, return null for the opportunity status

Given the above file and logic and assuming that the file is mapped in a GENERIC data stream type with the following mapping:

"Day" - Standard "Day" field

"Opportunity Key" > Main Generic Entity Key

"Opportunity Stage" - Main Generic Entity Attribute

"Opportunity Count" - Generic Custom Metric

A pivot table was created to present the count of opportunities in each stage. The pivot table is filtered on Jan 11th. What is the number of opportunities in the Interest stage?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Since the pivot table is filtered on January 11th and the provided Opportunity file does not show any records dated January 11th, there are zero opportunities in the Interest stage for that date. Salesforce Marketing Cloud Intelligence allows users to create pivot tables and filter data based on specific criteria, such as dates. In this case, the filter would exclude all rows that do not match the specified date, resulting in a count of zero for the Interest stage. This would apply to any stage since there are no records for January 11th. Reference can be made to Salesforce Marketing Cloud Intelligence documentation on filtering and pivot tables.

NEW QUESTION # 22

Your client would like to create a new harmonization field - Exam Topic.

The below table represents the harmonization logic from each source.

As can be seen from the table, there are in fact two fields that hold a certain connection: Exam ID and Exam Topic. The connection indicates that where an Exam ID is found - a single Exam Topic value is associated with it.

The client has a requirement to be able to view measurements from all data sources sliced by Exam Topic values, as seen in the following example:

The client suggested to create, without any mapping manipulations, several patterns via the harmonization center that will generate two Harmonized Dimensions:

Exam ID

Exam Topic

Given the above information, which statement is correct regarding the ability to implement this request with the above suggestion?

- **A. The Harmonized field for Exam ID is redundant. One Harmonized dimension for Exam Topic is enough for a sustainable and working solution**
- B. The above Patterns setup will not work for this use case.
- C. Only if 5 different Patterns are created, from 5 different fields - the solution will work.
- D. The solution will work - the client will be able to view Exam Topic with Email Sends.

Answer: A

Explanation:

If the harmonization logic consistently associates a single Exam Topic with each Exam ID across all data sources, then creating two harmonized dimensions may be unnecessary. One harmonized dimension for Exam Topic would suffice because it inherently carries the Exam ID's uniqueness within it. The harmonized dimension for Exam Topic would allow the client to slice the data by Exam Topic values, fulfilling the requirement.
