Mule-Dev-202 Minimum Pass Score | Reliable Mule-Dev-202 Exam Practice

The online version of Mule-Dev-202 study materials are based on web browser usage design and can be used by any browser

device. The first time you open Mule-Dev-202 study materials on the Internet, you can use it offline next time. Mule-Dev-202 study materials do not need to be used in a Wi-Fi environment, and it will not consume your traffic costs. You can practice with Mule-Dev-202 study materials at anytime, anywhere. On the other hand, the online version has a timed and simulated exam function. You can adjust the speed and keep vigilant by setting a timer for the simulation test. At the same time online version of Mule-Dev-202 Study Materials also provides online error correction—Through the statistical reporting function, it will help you find the weak links and deal with them. Of course, you can also choose two other versions. The contents of the three different versions of Mule-Dev-202 study materials are the same and all of them are not limited to the number of people/devices used at the same time.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q52-Q57):

NEW QUESTION # 52

A non-technical employee from AnyAirlines creates a hyperautomation solution. The solution needs to meet the following criteria: The process needs to begin when a record is created in Salesforce.

Then, it needs to pass data to a pre-existing RPA process which includes a User Task for data integrity purposes.

The output of the RPA process needs to be used to create a record in NetSuite.

According to best practices, how should this automated process be structured?

- A. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process.2. Then, the same flow uses the response to create a record in NetSuite.B 1. A Salesforce flow triggers on the creation of the record and calls to RPA process.2. Then, the same flow uses the response to create a record in NetSuite.
- B. 1. A Salesforce flow triggers on the creation of the record and makes an outbound request to a MuleSoft Composer flow.2. Then, the same MuleSoft Composer flow calls the RPA process and uses the result to create a record in NetSuite.
- C. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process.2. Then, a second MuleSoft Composer flow triggers when the RPA process is completed and creates a record in NetSuite.

Answer: A

Explanation:

To structure the automated process to meet the given criteria, the following approach is recommended:

MuleSoft Composer Flow Triggers on Record Creation:

Use MuleSoft Composer to create a flow that is triggered when a new record is created in Salesforce. This is done by setting up a trigger event in MuleSoft Composer that listens for new record creation events in Salesforce.

Call the RPA Process:

Once the flow is triggered, it should call the pre-existing RPA process. MuleSoft Composer can invoke MuleSoft RPA bots, and you can pass the necessary data from the Salesforce record to the RPA process.

The RPA process will include the User Task for data integrity purposes.

Use the RPA Process Output to Create a Record in NetSuite:

After the RPA process completes, the MuleSoft Composer flow can capture the output from the RPA process.

The same MuleSoft Composer flow will then use this output to create a record in NetSuite, ensuring a seamless data transfer and process automation.

NEW QUESTION # 53

AnyAirlines needs to select a tool for developing an integration between Salesforce and an ERP system in the cloud. The requirements state that the systems must communicate bidirectionally and as close to real time as possible. The ERP system can be accessed via a SOAP-based web service.

Which tool meets the requirements of this integration?

- A. Orchestrator
- B. MuleSoft RPA
- C. Anypoint Studio
- D. MuleSoft Composer

Answer: C

Explanation:

Anypoint Studio is the most suitable tool for developing an integration between Salesforce and an ERP system in the cloud,

especially when bidirectional communication in near real-time is required. Here's why:

SOAP-Based Web Services Support:

Anypoint Studio supports SOAP-based web services, which is essential since the ERP system can be accessed via SOAP.

Bidirectional Communication:

Anypoint Studio allows for complex integrations that require bidirectional communication. You can set up flows that handle both inbound and outbound data seamlessly.

Real-Time Integration:

With Anypoint Studio, you can design integrations that process data in near real-time, ensuring timely updates between Salesforce and the ERP system.

Advanced Integration Capabilities:

Anypoint Studio offers advanced capabilities for data transformation, error handling, and connecting various systems, making it ideal for complex integration scenarios.

NEW QUESTION # 54

Which API policy can be applied to limit the number of requests an individual client can make to an API?

- A. Spike Control
- B. Client ID Enforcement
- C. Rate limiting - SLA-Based
- D. OAuth 2.0 access token enforcement

Answer: C

Explanation:

The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).

Rate Limiting - SLA-Based:

This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client can make within a specified time frame.

You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.

Anypoint Platform Rate Limiting Documentation

NEW QUESTION # 55

Northern Trail Outfitters needs to update multiple systems outside of Salesforce based on record updates within Salesforce. A hyperautomation practitioner needs to configure Salesforce to call several APIs created by the MuleSoft development team from within a Salesforce flow.

What specifications must be imported into Salesforce to make external services available to a Salesforce flow that enables external invocable actions?

- A. RAML API specifications
- B. External API specifications
- C. Open API specifications
- D. Anypoint API specifications

Answer: C

Explanation:

To enable Salesforce to call external services within a flow, the appropriate specifications must be imported to make these external services available as invocable actions. The correct specification is Open API specifications. OpenAPI Specification (formerly known as Swagger) is a standard for defining APIs which can be easily imported into Salesforce to facilitate the integration and invocation of external services.

Import OpenAPI Specifications: Salesforce allows the import of OpenAPI specifications, which define the available endpoints and operations of an API, making them accessible as invocable actions in a Salesforce flow.

Creating External Services: By importing an OpenAPI definition into Salesforce, it creates an External Service, which you can then use within Flow to interact with the defined APIs.

Flow Integration: Once imported, these services can be integrated into Salesforce Flows to automate processes that require

interaction with external systems.
Salesforce External Services and API Integrations

NEW QUESTION # 56

Northern Trail Outfitters (NTO) uses Flow Orchestration to automate quote development. The "Review Quote" work item is performed by their team of technical writers but can be fulfilled by any technical writer on the team. How can NTO ensure the "Review Quote" work item is assigned to the correct Salesforce user?

- A. Use backend steps to automate work item assignment to the next available technical writer.
- B. Create a user collection variable and assign the work item to the user collection.
- C. Use MuleSoft RPA to review the document and submit it for approval if no issues are found.
- **D. Create a Group for the team of Salesforce Users and assign the work item to the group.**

Answer: D

Explanation:

To ensure the "Review Quote" work item is assigned to the correct Salesforce user within the team of technical writers, the following approach can be used:

Creating a Group:

Create a Group in Salesforce that includes all the technical writers who are eligible to perform the "Review Quote" work item. This group acts as a collective resource pool.

Assigning the Work Item to the Group:

When the "Review Quote" work item is created in Flow Orchestration, assign it to the group rather than an individual user.

Salesforce will then allow any available technical writer within the group to pick up and complete the task.

Ensuring Flexibility and Availability:

This method ensures that the work item can be completed by any technical writer in the team, providing flexibility and improving the chances of timely completion by utilizing the group's collective availability.
