So you just need to memorize our questions and answers of the COBIT-2019 Exam simulation, you are bound to pass the exam.

ISACA COBIT 2019 Foundation Sample Questions (Q124-Q129):

NEW QUESTION # 124
Which of the following I&T implementation methods requites the HIGHEST level of participation by users at multiple stages of software development?

- A. Hybrid
- B. Agile

- C. Traditional
- D. DevOps

Answer: B

Explanation:
Explanation
The IT implementation methods design factor describes how an enterprise develops, delivers, and maintains its IT solutions. There are four IT implementation methods defined in COBIT 2019: traditional, agile, DevOps, and hybrid. Each method has different implications for the governance and management of information and technology in terms of focus areas, processes, practices, roles, structures, and metrics. The IT implementation method that requires the highest level of participation by users at multiple stages of software development is agile. Agile is an IT implementation method that emphasizes flexibility, adaptability, collaboration, customer satisfaction, and value delivery. One of the characteristics of agile is that it involves frequent and direct interaction with users throughout the software development life cycle, from requirements gathering to testing to deployment. Users are considered as key stakeholders who provide feedback, input, validation, verification, acceptance, and evaluation of the IT solutions. Users are also involved in prioritizing the features and functionalities of the IT solutions based on their needs and expectations. Agile aims to deliver IT solutions that meet user requirements and expectations in a timely and cost-effective manner.References: : COBIT 2019 Design Guide, page 43-45 : COBIT 2019 Process Reference Guide: Governance and Management Objectives, page 67-69

NEW QUESTION # 125
Which of the following MUST be done before an enterprise can determine performance measures for a process improvement initiative?

- A. Calculate return on investment (ROI)
- B. Perform a process risk assessment
- C. Conduct a capabilities assessment

Answer: C

NEW QUESTION # 126
Which of the following alignment goals is MOST likely to be associated with the metric "percent of I&T services with defined operational costs and expected benefits?

- A. Quality of technology-related financial information
- B. Agility to turn business requirements into operational solutions
- C. Delivery of I&T services in line with business requirements

Answer: C

Explanation:
Explanation
The alignment goal titled "Delivery of IT services in line with business requirements" is most likely to be associated with the metric "percent of IT services with defined operational costs and expected benefits". This metric measures the extent to which IT services are aligned with business needs and expectations, and deliver value for money. The alignment goal is one of the 17 enterprise goals defined in COBIT 2019, which describe the outcomes that an enterprise wants to achieve from its use of information and technology. The alignment goal is based on the COBIT 2019 Framework4, page 36. References: 4: COBIT 2019 Framework | Digital | English
