## Reasons to Choose Web-Based Splunk SPLK-3002 Practice Exam

PDFBraindumps also presents desktop-based Splunk SPLK-3002 practice test software which is usable without any internet connection after installation and only required license verification. Splunk SPLK-3002 practice test software is very helpful for all those who desire to practice in an actual Splunk IT Service Intelligence Certified Admin (SPLK-3002) exam-like environment. Splunk IT Service Intelligence Certified Admin (SPLK-3002) practice test is customizable so that you can change the timings of each session. PDFBraindumps desktop Splunk SPLK-3002 practice test questions software is only compatible with windows and easy to use for everyone.

Splunk SPLK-3002 exam covers a range of topics related to Splunk ITSI, including data onboarding, data processing, creating and configuring service models, configuring KPIs, defining notable events, creating and managing glass tables, and using ITSI to troubleshoot IT issues. SPLK-3002 exam is designed to test the knowledge and skills needed to use Splunk ITSI to monitor and analyze IT services, as well as the ability to troubleshoot and resolve IT issues using ITSI. SPLK-3002 Exam also covers best practices for deploying and managing Splunk ITSI in production environments.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q71-Q76):

### NEW QUESTION # 71

After ITSI is initially deployed for the operations department at a large company, another department would like to use ITSI but wants to keep their information private from the operations group. How can this be achieved?

- A. Create service templates for each group and create the services from the templates.
- B. Create teams for each department and assign KPIs to each team.
- C. Create services for each group and set the permissions of the services to restrict them to each group.

- D. Create teams for each department and assign services to the teams.

**Answer: D**

Explanation:

In Splunk IT Service Intelligence (ITSI), creating teams for each department and assigning services to those teams is an effective way to segregate data and ensure that information remains private between different groups within an organization. Teams in ITSI provide a mechanism for role-based access control, allowing administrators to define which users or groups have access to specific services, KPIs, and dashboards. By setting up teams corresponding to each department and then assigning services to these teams, ITSI can accommodate multi-departmental use within the same instance while maintaining strict access controls. This ensures that each department can only view and interact with the data and services relevant to their operations, preserving confidentiality and data integrity across the organization.

#### NEW QUESTION # 72

Which of the following is a best practice for identifying the most effective services with which to start an iterative ITSI deployment?

- A. Analyze the business to determine the most critical services.
- B. Focus on low-level services.
- C. Only include KPIs if they will be used in multiple services.
- D. Define a large number of key services early.

**Answer: C**

#### NEW QUESTION # 73

Which of the following is a recommended best practice for service and glass table design?

- A. Always use the standard icons for glass table widgets to improve portability.
- B. Plan and implement services first, then build detailed glass tables.
- C. Start with base searches, then services, and then glass tables.
- D. Design glass tables first to discover which KPIs are important.

**Answer: B**

Explanation:

Reference:

A is the correct answer because it is recommended to plan and implement services first, then build detailed glass tables that reflect the service hierarchy and dependencies. This way, you can ensure that your glass tables provide accurate and meaningful service-level insights. Building glass tables first might lead to unnecessary or irrelevant KPIs that do not align with your service goals.

#### NEW QUESTION # 74

Which of the following items describe ITSI Deep Dive capabilities? (Choose all that apply.)

- A. Examining and comparing alert levels for KPIs in a service over time.
- B. Visualizing one or more Service KPIs values by time.
- C. Comparing swim lane values for a slice of time.
- D. Comparing a service's notable events over a time period.

**Answer: A,B,C**

#### NEW QUESTION # 75

Which of the following describes a realistic troubleshooting workflow in ITSI?

- A. Service Analyzer -> Notable Event Review -> Deep Dive
- B. Correlation Search -> Deep Dive -> Notable Event
- C. Service Analyzer -> Aggregation Policy -> Deep Dive

- D. Correlation search -> KPI -> Aggregation Policy

**Answer: A**

Explanation:

A realistic troubleshooting workflow in ITSI is:

- \* B. Service Analyzer -> Notable Event Review -> Deep Dive

This workflow involves using the Service Analyzer dashboard to monitor the health and performance of your services and KPIs, using the Notable Event Review dashboard to investigate and manage the notable events generated by ITSI, and using the Deep Dive dashboard to analyze the historical trends and anomalies of your KPIs and metrics.

The other workflows are not realistic because they involve components that are not part of the troubleshooting process, such as correlation search, aggregation policy, and KPI. These components are used to create and configure the alerts and episodes that ITSI generates, not to investigate and resolve them. References:
