Fortinet NSE6_FSR-7.3 Valid Test Registration, NSE6_FSR-7.3 Cost Effective Dumps

What's more, part of that PassCollection NSE6_FSR-7.3 dumps now are free: https://drive.google.com/open?id=1-vE7Ry58ZJRLetYE2KrlhAUa771yzWMz

Our supporter of NSE6_FSR-7.3 study guide has exceeded tens of thousands around the world, which directly reflects the quality of them. Because the exam may put a heavy burden on your shoulder while our NSE6_FSR-7.3 practice materials can relieve you of those troubles with time passing by. Just spent some time regularly on our NSE6_FSR-7.3 Exam simulation, your possibility of getting it will be improved greatly.

Getting Fortinet certification is a good way for you to access to IT field. But you may find that real test questions are difficult and professional and you have no time to prepare the NSE6_FSR-7.3 valid test. So it is time that our latest dumps torrent and training materials help you get high passing score in the process of NSE6_FSR-7.3 practice test at your first attempt.

Excellent NSE6_FSR-7.3 Exam Questions make up perfect Study Brain Dumps - PassCollection

The meaning of qualifying examinations is, in some ways, to prove the candidate's ability to obtain NSE6_FSR-7.3 qualifications that show your ability in various fields of expertise. If you choose our NSE6_FSR-7.3 learning guide materials, you can create more unlimited value in the limited study time, learn more knowledge, and take the exam that you can take. Through qualifying NSE6_FSR-7.3 examinations, this is our NSE6_FSR-7.3 real questions and the common goal of every user, we are trustworthy helpers, so please don't miss such a good opportunity.

Fortinet NSE6_FSR-7.3 Exam Syllabus Topics:

Topic	Details
Topic 1	• SOC and SOAR Overview: Security Engineers can gain an understanding of SOC and SOAR deployment requirements, including licensing management for FortiSOAR.
Topic 2	• System Monitoring and Maintenance: For FortiSOAR Administrators, this domain covers using various tools for system monitoring to ensure consistent performance. This includes how to regularly oversee FortiSOAR processes, along with other critical functions.

Topic 3	• System Configuration: FortiSOAR requires careful setup of applications for FortiSoar System Administrators. It covers system fixtures, and proxy settings to function optimally.
Topic 4	• Security Management: This section covers how Security Engineers implement role-based access control (RBAC) and set up team structures within FortiSOAR to streamline security management.
Topic 5	• System Operation: For System Engineers, this section covers Elasticsearch data management that may need to be externalized or migrated to accommodate system needs. Additionally, this section covers configuring the recommendation engine and utilizing the war room functionality.

Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30
When configuring an HA cluster with an externalized PostgreSQL database, which two tiles on the database server need to be configured to trust all FortiSOAR nodes' incoming connections? (Choose two.)

- A. postgreaq1.conf
- B. pg_hba.conf
- C. db_external_config.yml.
- D. db_config.yml

Answer: A,B

Explanation:
In a FortiSOAR High Availability (HA) cluster setup with an externalized PostgreSQL database, it is necessary to configure the database server to allow incoming connections from all FortiSOAR nodes. This configuration involves modifying the pg_hba.conf file to set up host-based authentication and control which IP addresses can connect. The postgresql.conf file must also be adjusted to enable listening on all necessary IP addresses, which is critical for FortiSOAR nodes to connect to the database server securely and reliably. Together, these configurations ensure that all FortiSOAR nodes can access the database, facilitating effective HA functionality.

NEW QUESTION # 31
An administrator is issuing the following command on a node trying to join a FortiSOAR duster as a standby:
csadm ha join-cluster --status active -role secondary --primary-node 10.0.1.160 The node fails to join the cluster. What is the issue?

- A. The role value should be worker.
- B. The IP address should be for secondary-node Instead of primary-node.
- C. The status value should be passive.
- D. The primary node needs to be resolvable via FQDN.

Answer: C

Explanation:
When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup.
In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

NEW QUESTION # 32
Refer to the exhibit.

Service	Email* ⓘ
SMTP ▾	csadmin@internal.lab

Please ensure your SMTP service is configured.

Monitoring Interval (Minutes)

5

The monitoring job will run at this schedule

System Health Thresholds

A notification will be generated when the resource consumption on the server is high.

Define the respective thresholds below:

Memory Utilization (%)	CPU Utilization (%)	Disk Utilization (%)
80	80	80

Swap Memory Utilization (%)	Workflow Queue Threshold	WAL Files Size (GB)
50	100	20

FORTINET.

Cluster Health

An email notification will also be generated if there are missed heartbeats from any of the cluster nodes,

or if the replication lag is high.

Define the respective thresholds below:

Missed Heartbeat Count	Replication Lag (GB)
3	3

How long after the syops-ha service goes down will the heartbeat missed notification be sent to the administrator?

- A. 5 minutes
- B. 3 minutes
- C. 15 minutes
- D. 60 minutes

Answer: D

Explanation:
In FortiSOAR's high availability (HA) setup, if the cyops-ha service becomes unresponsive, the system is configured to send a "heartbeat missed" notification after a specified period, which in this case is 60 minutes. This delay allows for transient issues to be resolved without triggering immediate alerts, while also ensuring that administrators are informed of prolonged service disruptions. Timely notifications about the cyops-ha service's status help maintain the reliability and responsiveness of the HA environment.

NEW QUESTION # 33
Which two system monitoring reports are available on the System Monitoring widget?
(Choose two.)

- A. Playbook Health Status
- B. Service Status
- C. RAM Usage
- D. CPU Usage

Answer: B,D

NEW QUESTION # 34
What are two system-level logs that can be purged using application configuration? (Choose two.)

- A. Audit togs
- B. Connector logs
- C. Reporting logs
- D. Executed Playbook logs

Answer: A,D

Explanation:

In FortiSOAR, system-level logs that can be purged include both "Audit logs" and "Executed Playbook logs." These types of logs can be configured to be purged periodically to free up storage space and ensure that unnecessary logs do not impact system performance. The application configuration allows administrators to schedule automatic purges, which can be especially useful in high-activity environments where log data accumulates quickly. Purging these logs helps maintain a cleaner and more efficient system.

NEW QUESTION # 35

......

Most experts agree that the best time to ask for more dough is after you feel your NSE6_FSR-7.3 performance has really stood out. To become a well-rounded person with the help of our NSE6_FSR-7.3 study questions, reducing your academic work to a concrete plan made up of concrete actions allows you to streamline and gain efficiency, while avoiding pseudo work and guilt. Our NSE6_FSR-7.3 Guide materials provide such a learning system where you can improve your study efficiency to a great extent.
