## Valid CCSFP Exam Notes & CCSFP Prep Guide

Many applicants do not fulfill their dream of becoming professionals because of using outdated exam preparation material. Failure in the Certified CSF Practitioner 2025 Exam exam leads them to anxiety. If this situation sounds familiar, do not waste time and get your hands on HITRUST CCSFP for exam preparation.

## HITRUST Certified CSF Practitioner 2025 Exam Sample Questions (Q66-Q71):

### NEW QUESTION # 66

Which assessment type tests against requirement statements considered essential to cybersecurity hygiene?

- A. e1 Assessment
- B. r2 Assessment
- C. il Assessment
- D. Targeted Assessment
- E. None of the above

**Answer: A,C**

Explanation:

The HITRUST e1 and il assessments are streamlined, moderate-effort assurance models designed to evaluate an entity's implementation of essential cybersecurity hygiene controls. These assessments focus on baseline security practices recognized across industries as foundational for protecting sensitive information. The e1 is intended for smaller organizations or those with limited resources, covering a subset of controls that address basic hygiene. The il provides expanded coverage beyond e1, testing against

controls deemed critical for medium assurance levels. By contrast, the r2 is the most rigorous and risk-tailored assessment, covering a broader and more detailed control set. Targeted assessments are specialized and do not focus broadly on hygiene. Therefore, the e1 and i1 assessments are the correct answers.

References: HITRUST Assurance Program Overview - "e1, i1, r2 Comparison"; CCSFP Practitioner Guide - "Cybersecurity Hygiene in e1 and i1 Assessments."

#### NEW QUESTION # 67

All assessment domains are updated with additional requirements when the AI Security factor is selected.

- A. False
- B. True

**Answer: A**

Explanation:

When the AI (A1) Security factor is selected during scoping, HITRUST does not add requirements across all 19 domains. Instead, it introduces specific requirement statements relevant to AI risks, such as data integrity, model governance, algorithm transparency, and monitoring. These requirements are mapped to domains most impacted by AI operations, like Information Protection, Risk Management, and Data Privacy. Domains unrelated to AI (for example, Facilities Security or Environmental Safeguards) may not receive any new requirements. This selective approach ensures that AI risk factors are incorporated appropriately without overloading domains unnecessarily. Thus, it is inaccurate to state that every domain is updated with AI-related requirements.

References: HITRUST A1 Security Assessment Guide - "Domain Applicability"; CCSFP Study Guide - "AI-Specific Requirement Mapping."

#### NEW QUESTION # 68

Which AI models can be evaluated using the A1 Security Assessment?

- A. Back Propagation
- B. Generative
- C. Rule-Based
- D. Hodgkin-Huxley
- E. Predictive

**Answer: B,C,E**

Explanation:

The A1 Security Assessment module evaluates the security, governance, and risk management of artificial intelligence models. HITRUST specifies coverage for widely used model types, including:

- \* Predictive models, which forecast outcomes based on historical data (e.g., fraud detection, patient risk scoring).
- \* Generative models, which create new data outputs (e.g., AI image or text generators).
- \* Rule-based models, which use defined logic for decision-making.

The goal of the A1 assessment is to ensure that these AI models are developed, implemented, and monitored securely, with appropriate safeguards around data integrity, bias management, and model explainability.

Options like Hodgkin-Huxley (a neuroscience model) and Back Propagation (a training algorithm) are not types of AI models scoped by the A1 assessment. Instead, the A1 factor focuses on applied model categories used in operational environments.

References: HITRUST A1 Security Assessment Guide - "Applicable AI Models"; CCSFP Practitioner Training - "AI Risk and Model Categories."

#### NEW QUESTION # 69

Enter the value assigned to each of the following scoring levels on the HITRUST Scoring Rubric.

□

**Answer:**

Explanation:

□ Explanation:

\* Fully Compliant = 100

- \* Mostly Compliant = 75
- \* Partially Compliant = 50
- \* Somewhat Compliant = 25
- \* Non-Compliant = 0

HITRUST assigns specific numeric values to compliance categories within the scoring rubric to standardize assessments. These categories translate qualitative assessments into quantitative scores:

- \* Fully Compliant (100): All criteria met with complete and verified evidence.
- \* Mostly Compliant (75): Most criteria met; minor gaps exist.
- \* Partially Compliant (50): Roughly half of the evaluative elements are met.
- \* Somewhat Compliant (25): Only a small fraction of the evaluative elements are satisfied.
- \* Non-Compliant (0): No evidence of compliance.

These values are applied at the Requirement Statement level and then averaged upward into Control Reference and Domain scores. This quantification ensures consistency and supports certification thresholds such as the domain-level requirement of 71 for r2 certification.

References: HITRUST Scoring Rubric - "Compliance Categories"; CCSFP Practitioner Guide - "Scoring Scales."

### NEW QUESTION # 70

Which version of the CSF supports a traversable requirement statement portfolio?

- A. v9.2
- **B. 0**
- C. v9.6.1
- D. v9.4

**Answer: B**

### NEW QUESTION # 71

.....

Originating the CCSFP exam questions of our company from tenets of offering the most reliable backup for customers, and outstanding results have captured exam candidates' heart for their functions. Our CCSFP practice materials can be subdivided into three versions. All those versions of usage has been well-accepted by them. They are the PDF, Software and APP online versions of our CCSFP Study Guide.
