

C_BCBDC_2505 Übungstest: SAP Certified Associate - SAP Business Data Cloud & C_BCBDC_2505 Braindumps Prüfung

Laden Sie die neuesten Pass4Test C_BCBDC_2505 PDF-Versionen von Prüfungsfragen kostenlos von Google Drive herunter: <https://drive.google.com/open?id=1eNTPn9fCxezFr3gTbISpUBakfCVBD8Ic>

Sie können im Internet teilweise die Fragen und Antworten zur SAP C_BCBDC_2505 Zertifizierungsprüfung von Pass4Test kostenlos als Probe herunterladen. Dann würden Sie finden, dass die Übungen von Pass4Test ist die umfassendsten und genau was, was Sie wollen.

SAP C_BCBDC_2505 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.
Thema 2	• SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.
Thema 3	• SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.

C_BCBDC_2505 Online Praxisprüfung, C_BCBDC_2505 Zertifizierungsantworten

Wir hoffen, dass sich alle Ihrer in der SAP C_BCBDC_2505 Prüfungssoftware gesetzten Erwartungen erfüllen können. Die Vollständigkeit und Autorität der Test-Bank, Vielfältigkeit der Versionen von Unterlagen--- Es gibt 3 Versionen, nämlich PDF, Online Test Engine und Practice Testing Engine, und auch die kostenlose Demo und einjährige Aktualisierung der SAP C_BCBDC_2505 Software, alles enthält unsere herzlichste Anstrengungen!

SAP Certified Associate - SAP Business Data Cloud C_BCBDC_2505 Prüfungsfragen mit Lösungen (Q22-Q27):

22. Frage

In SAP Analytics Cloud, you have a story based on an import model. The transactional data in the model's data source changes. How can you update the data in the model?

- A. Refresh the data source
- B. Refresh the story
- **C. Schedule the import**
- D. Allow model import

Antwort: C

Begründung:

When an SAP Analytics Cloud (SAC) story is based on an import model, the data is physically copied and stored within SAC. Therefore, simply refreshing the story (option A) will only update the visualization with the data already in the model and will not pull new data from the source. Similarly, "Allow model import" (option B) isn't a direct action for updating data, but rather a prerequisite for the import process itself. "Refresh the data source" (option C) is not an action performed within SAC for an import model. To update the data in the model when the transactional data in its source changes, you must schedule the import (option D) or manually re-run the import process. This process re-fetches the latest data from the original source system and updates the SAC import model, ensuring your story reflects the most current information. This scheduling can be set up to occur at regular intervals, keeping the model synchronized with the source data.

23. Frage

What do you use to write data from a local table in SAP Datasphere to an outbound target?

- A. Transformation Flow
- **B. Data Flow**
- C. CSN Export
- D. Replication Flow

Antwort: B

Begründung:

To write data from a local table in SAP Datasphere to an outbound target, you primarily use a Data Flow. A Data Flow in SAP Datasphere is a powerful tool designed for comprehensive data integration and transformation. It allows you to extract data from various sources (including local tables within Datasphere), perform various transformations (like joins, aggregations, filtering, scripting), and then load the processed data into a specified target. This target can be another local table, a remote table, or an outbound target like an external database or a file system. While a Replication Flow (C) is used for ingesting data into Datasphere, and a Transformation Flow (A) is not a standalone artifact for outbound writes (often part of a Data Flow), the Data Flow provides the complete framework for extracting, transforming, and loading data, including sending it to external destinations.

24. Frage

What is the first action Allen (Business Analyst) takes when Natalie (Chief Finance Officer) reaches out to him for insights on working capital?

Please choose the correct answer.

Response:

- A. He shares the Data Product with SAP Databricks.
- B. He reviews the details and installs the Intelligent Application.
- **C. He explores the available Intelligent Application in SAP Business Data Cloud Catalog.**
- D. He develops a custom ML model.

Antwort: C

25. Frage

Your users need a story where the pages adjust the size and location of the elements on the page depending on the device, or size of device, being used to view the story. What page type should you use?

Please choose the correct answer.

Response:

- A. Grid
- **B. Responsive**
- C. Canvas

Antwort: B

26. Frage

Which semantic usage type does SAP recommend you use in an SAP Datasphere graphical view to model master data?

- **A. Dimension**
- B. Fact
- C. Analytical Dataset
- D. Relational Dataset

Antwort: A

Begründung:

When modeling master data within an SAP Datasphere graphical view, SAP strongly recommends using the Dimension semantic usage type. Master data, such as customer information, product details, or organizational hierarchies, provides context and descriptive attributes for transactional data. Marking a view as a "Dimension" explicitly signals to downstream consumption tools (like SAP Analytics Cloud) and other Datasphere models that this view contains descriptive attributes that can be used for filtering, grouping, and providing context to analytical queries. This semantic tagging ensures that the data is interpreted and utilized correctly in analytical scenarios, distinguishing it from "Fact" data (which represents transactional measures) or "Relational Dataset" (a more generic type without specific analytical semantics). Using the "Dimension" semantic usage type aligns with best practices for building robust and understandable data models for analytics.

27. Frage

.....

Probieren Sie vor dem Kauf! Wir Pass4Test sind verantwortlich für jeder Kunde. Wir bieten Ihnen kostenfreie Demos der SAP C_BCBDC_2505, somit können Sie nach der Probe unbesorgt kaufen. Außerdem können wir Ihnen garantieren, dass Sie keine Reue empfinden werden, nachdem Sie unsere SAP C_BCBDC_2505 Prüfungssoftware gekauft haben. Denn Sie können durch die Benutzung ihre Zuverlässigkeit empfinden. Dadurch bekommen Sie mehr Konfidenz angesichts der SAP C_BCBDC_2505 Prüfung
