2026 Testpdf最新的Analytics-Arch-201 PDF版考試題庫和Analytics-Arch-201考試問題和答案免費分享：<https://drive.google.com/open?id=1ECNxcQ4TYfyatD0AapJamhlV9wEPdk5r>

隨著社會的發展，現在Salesforce行業得到了人們的青睞，也有越來越多的人們想考取Salesforce方面的資格認證證書，在事業上更進一步。這個時候你應該想到的是Testpdf網站，它是你Analytics-Arch-201考試合格的好幫手。Testpdf的強大考古題是Analytics-Arch-201技術專家們多年來總結出來的經驗和結果，站在這些前人的肩膀上，會讓你離成功更進一步。

Salesforce Analytics-Arch-201 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

主題 2	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
主題 3	<ul style="list-style-type: none"> • Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Analytics-Arch-201更新：Salesforce Certified Tableau Architect100%通過考試，Salesforce Analytics-Arch-201 認證

為了永遠給你提供最好的Analytics-Arch-201認證考試的考古題，Testpdf一直在不斷提高考古題的品質，並且隨時根據最新的Analytics-Arch-201考試大綱更新考古題。在現在的市場上，Testpdf是你最好的選擇。長時間以來，Testpdf已經得到了眾多考生的認可。如果你不相信的話，你可以向你身邊的人打聽一下，肯定有人曾經使用過Testpdf的資料。我們保證給你提供最優秀的參考資料讓你一次通過考試。

最新的 Architect Exams Analytics-Arch-201 免費考試真題 (Q167-Q172):

問題 #167

In configuring a custom embedded solution for Tableau Server, what is an important consideration when setting up trusted tickets for user authentication?

- **A. Establishing a trusted relationship between the Tableau Server and the web server hosting the embedded solution**
- B. Using trusted tickets as the sole method for distributing content outside of the Tableau environment
- C. Disabling all other forms of authentication to ensure exclusive use of trusted tickets
- D. Configuring the Tableau Server to accept trusted tickets from any external domain

答案：A

解題說明：

Establishing a trusted relationship between the Tableau Server and the web server hosting the embedded solution When setting up trusted tickets for a custom embedded solution in Tableau Server, it's crucial to establish a trusted relationship between the Tableau Server and the web server hosting the embedded solution. This ensures secure and seamless authentication of users accessing Tableau content through the embedded application. Option A is incorrect because disabling all other forms of authentication is not necessary and may limit flexibility in access control. Option C is incorrect as configuring Tableau Server to accept trusted tickets from any domain can pose significant security risks. Option D is incorrect because trusted tickets should not be the sole method for content distribution, as they are specifically designed for user authentication in embedded scenarios.

問題 #168

For a Tableau administrative dashboard designed to monitor user engagement, which metric would be most beneficial to include?

- A. The server's uptime and downtime statistics
- B. The disk space used by the Tableau Server
- **C. The number of views created by users per month**

- D. The amount of network traffic to and from the Tableau Server

答案： C

解題說明：

The number of views created by users per month Including the metric of the number of views created by users per month on an administrative dashboard is effective for monitoring user engagement on Tableau Server. This metric provides valuable insights into how actively users are interacting with and utilizing the server, indicating the level of engagement and adoption of the platform. Option A is incorrect because disk space usage, while important for server maintenance, does not directly measure user engagement. Option C is incorrect as server uptime and downtime statistics, while critical for overall server health monitoring, do not directly reflect user engagement. Option D is incorrect because the amount of network traffic, although indicative of server usage, does not specifically measure user engagement in creating and interacting with views.

問題 #169

During the installation of Tableau Server on a Windows system, you encounter a permissions error. What should be your initial action to address this issue?

- A. Reinstalling the Windows operating system to reset system permissions
- B. Granting administrator privileges to all user accounts on the Windows system
- C. Checking and adjusting the security permissions of the Tableau Server installation directory
- D. Disabling User Account Control (UAC) on the Windows system

答案： C

解題說明：

Checking and adjusting the security permissions of the Tableau Server installation directory When encountering a permissions error during the installation of Tableau Server on Windows, the first action should be to check and adjust the security permissions of the installation directory. Ensuring that the installer has the necessary permissions to write to the directory is crucial for a successful installation. Option A is incorrect because disabling UAC is not a recommended practice and does not specifically address permission issues with the Tableau Server installation directory. Option C is incorrect as granting administrator privileges to all users is excessive and poses a security risk. Option D is incorrect because reinstalling the operating system is an unnecessary and extreme measure for resolving a permissions issue.

問題 #170

In the context of SSL encryption for Tableau Server, what factor is important to consider to maintain the effectiveness of the SSL implementation?

- A. Ensuring the SSL certificate covers all domain names and subdomains used by Tableau Server
- B. Configuring all user accounts in Tableau Server to require SSL for authentication
- C. Regularly updating the Tableau Server software to the latest version
- D. Increasing the bandwidth capacity of the network to accommodate SSL traffic

答案： A

解題說明：

Ensuring the SSL certificate covers all domain names and subdomains used by Tableau Server When implementing SSL encryption in Tableau Server, it is important to ensure that the SSL certificate covers all domain names and subdomains used by the server. This ensures that SSL protection is applied consistently across the entire server environment, preventing security gaps that might occur if some parts of the domain are not covered. Option A is incorrect because while updating Tableau Server is important for overall security and functionality, it is not specific to maintaining the effectiveness of SSL implementation. Option C is incorrect as increasing bandwidth capacity is generally not required solely due to SSL traffic. Option D is incorrect because configuring user accounts to require SSL for authentication, while a good security practice, is not directly related to the effectiveness of the SSL certificate coverage on the server.

問題 #171

When troubleshooting Connected App authentication issues in Tableau Server, what factor should be primarily investigated?

- A. The version compatibility of Tableau Server with the connected app
