

# Valid Exam Fire-Inspector-II Blueprint | New Fire-Inspector-II Test Review

DOWNLOAD the newest DumpsFree Fire-Inspector-II PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1x62K11bQwaUIxv2cAhvKu6deyRugzAN>

We are popular not only because our outstanding Fire-Inspector-II practice dumps, but also for our well-praised after-sales service. After purchasing our Fire-Inspector-II practice materials, the free updates will be sent to your mailbox for one year long if our experts make any of our Fire-Inspector-II Guide materials. They are also easily understood by exam candidates. Our Fire-Inspector-II actual exam can secedes you from tremendous materials with least time and quickest pace based on your own drive and practice to win.

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our Fire-Inspector-II actual exam can help you out. Our Fire-Inspector-II learning guide always boast a pass rate as high as 98% to 100%, which is unique and unmatched in the market. Using our Fire-Inspector-II Study Materials can also save your time in the exam preparation for the content is all the keypoints covered.

## New Fire-Inspector-II Test Review, Fire-Inspector-II Pass Guaranteed

We promise that you can get through the challenge winning the Fire-Inspector-II exam within a week. There is no life of bliss but bravely challenging yourself to do better. So there is no matter of course. Among a multitude of Fire-Inspector-II practice materials in the market, you can find that our Fire-Inspector-II Exam Questions are the best with its high-quality and get a whole package of help as well as the best quality Fire-Inspector-II study materials from our services.

## International Code Council 67 - Fire Inspector II Exam Sample Questions (Q85-Q90):

### NEW QUESTION # 85

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. They must automatically sound a fire alarm throughout the hotel.
- B. Their batteries must be checked every six months.
- **C. They must be interconnected so that one alarm will activate all alarms within the guest rooms.**
- D. They must initiate an automatic fire suppression or sprinkler system.

**Answer: C**

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section

907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

#### NEW QUESTION # 86

The interior finish of walls and a ceiling in an atrium may not be less than \_\_\_\_ Class

- A. Class D - Not recognized as an acceptable interior finish classification for atriums.
- B. Class B - Less fire-resistant than Class A, not permitted for atriums.
- C. **Class A - Interior Finish Ratings (Per ASTM E84 and NFPA 286)**
- D. Class C - Provides even lower fire protection, making it unsuitable.

**Answer: C**

Explanation:

The interior finish requirements for walls and ceilings in an atrium are regulated under the 2021 International Building Code (IBC), Section 404 - Atriums, and Table 803.11 - Interior Wall and Ceiling Finish Requirements.

IBC Section 404.8 - Interior Finish in Atriums:

"The interior finish of walls and ceilings in an atrium shall be not less than Class A." Class A interior finishes have the highest level of fire resistance and low flame spread to minimize fire hazards in large open spaces like atriums.

#### NEW QUESTION # 87

Horizontal exits shall not comprise more than \_\_\_\_ of the required exits from any floor area in a Group I-2 occupancy.

- A. 1/2
- B. 2/3
- C. 1/3
- D. 3/4

**Answer: A**

Explanation:

For Group I-2 occupancies (such as hospitals, nursing homes, and similar healthcare facilities), horizontal exits are used to improve fire safety by allowing occupants to move to a safer area without using stairs or elevators.

IFC 2021, Section 1026.1 (Horizontal Exits - General Requirements) states that:

Horizontal exits shall not comprise more than one-half (1/2) of the required exits from any floor area in a Group I-2 occupancy.

This ensures that at least 50% of the required exits remain traditional vertical or exterior exits, maintaining a balance between horizontal and traditional egress routes.

#### NEW QUESTION # 88

Given: Scheduling inspections should be done to obtain a high level of efficiency. When scheduling inspections at multiple occupancies on the same day, the inspector should:

- A. only identify critical violations.
- B. set limits on the time spent at each occupancy.
- C. select occupancies with historically low violations.
- D. **select occupancies in the same general area.**

**Answer: D**

Explanation:

Efficient scheduling minimizes travel time and maximizes inspection coverage, a practical aspect of fire inspection management (not explicitly detailed in the IFC but implied in Section 106.2, Inspections).

Selecting occupancies in the same geographic area (C) reduces travel, allowing more time for thorough inspections. Option A undermines the comprehensive nature of inspections required by IFC Section 106.1.

Option B could compromise inspection quality, not efficiency. Option D focuses on violation history, which doesn't inherently improve scheduling efficiency and may skew priorities. Thus, C is the most logical and IFC-aligned choice.

### NEW QUESTION # 89

Where requirements for fire safety are not specifically provided for by the International Fire Code, which of the following shall have the responsibility to determine the applicable requirements?

- A. Board of appeals.
- B. City manager.
- C. Fire code official.
- D. Legal counsel.

**Answer: C**

Explanation:

According to the International Fire Code (IFC) 2021, when specific fire safety requirements are not explicitly provided for in the code, the responsibility to determine the applicable requirements falls upon the Fire Code Official.

Reference from the IFC (2021):

IFC Section 104.1 - General Authority and Responsibilities:

This section explicitly grants the Fire Code Official the authority to interpret the code and determine the necessary safety measures in cases where the code does not provide specific guidance.

It states: "The fire code official is hereby authorized to enforce the provisions of this code and shall have the authority to render interpretations of the code and to adopt policies and procedures in order to clarify the application of its provisions." IFC Section 104.9 - Alternative Materials and Methods:

This section further supports the authority of the Fire Code Official by allowing them to approve alternative fire safety measures when strict compliance with the code is not feasible.

Why Other Options Are Incorrect?

A: City Manager:

The city manager is responsible for administrative and operational management but does not have the authority to interpret or enforce fire code requirements.

B: Legal Counsel:

Legal counsel provides legal advice but does not have jurisdiction over fire safety code enforcement.

C: Board of Appeals:

The board of appeals reviews disputes and interpretations made by the Fire Code Official, but they do not have primary responsibility for determining applicable fire safety requirements.

Final Conclusion:

The Fire Code Official is the designated authority responsible for interpreting and applying fire safety requirements in situations where the International Fire Code (IFC) does not explicitly provide specific provisions.
