Topic 5	<ul style="list-style-type: none">• Workflows: This domain focuses on configuring automated workflows that execute predefined actions when specific triggers or conditions are met.

Updates To The CrowdStrike CCFA-200b Exam Are Free For 1 year

Our CCFA-200b real exam materials have high appraisal in the market for their quality and high efficiency. Because satisfied customer is the best ads, and the word of mouth communication by the customers give others more sense of credibility than any other form of marketing communication. We know a satisfied customer will come back again for the same or different need to the company, so we always provide high-rank CCFA-200b real exam materials over ten years. They have experienced all trials of the market these years approved by experts. Besides, they are easy to assimilate so if you get stuck in the bottleneck of review, and under the guidance of our CrowdStrike Falcon Administrator exam question they are widely regarded as top notch in this area. Recently our CCFA-200b Guide prep rise to the forefront in the field of practice materials. So if you need other CCFA-200b real exam materials from us, we will not let you down not even once. Hope you pass the exam once successfully by our CrowdStrike Falcon Administrator exam question and recommend them to your friends. We are sure you will be splendid!

CrowdStrike Falcon Administrator Sample Questions (Q229-Q234):

NEW QUESTION # 229

You have been asked by your Server management team to provide a list of all Servers that have a "TIER3" Sensor grouping tag. What method will allow you to export a .csv file with the results?

- A. On the Host management page filter by Type - Server, and Tags - SensorGroupingTags/ TIER3, then export the results
- B. On the Host dashboard select the OS platform - Server, and the Tag - SensorGroupingTags/ TIER3, then export the results
- C. On the Host management page filter by OS Version - Server, and Tags - SensorGroupingTags/ TIER3, then export the results
- D. On the Host management page filter by Platform - Server, then export the results

Answer: A

NEW QUESTION # 230

When a host belongs to more than one host group, how is sensor update precedence determined?

- A. Sensors of hosts that belong to more than one group must be manually updated
- B. All of the host's groups are examined in aggregate and the policy with highest precedence is applied to the host
- C. Groups have no impact on sensor update policies
- D. The highest precedence policy from the most important group is applied to the host

Answer: B

Explanation:

The option that describes how sensor update precedence is determined when a host belongs to more than one host group is that all of the host's groups are examined in aggregate and the policy with highest precedence is applied to the host. A Sensor Update policy is a policy that controls how and when the Falcon sensor is updated on a host. You can create and assign custom Sensor Update policies to different hosts or groups in your environment. Each Sensor Update policy has a precedence value, which determines its priority over other policies. The higher the precedence value, the higher the priority. If a host belongs to more than one host group, each with a different Sensor Update policy assigned, then all of the host's groups are examined in aggregate and the policy with highest precedence among them is applied to the host.

NEW QUESTION # 231

Which of the following controls the speed in which your sensors will receive automatic sensor updates?

- A. Maintenance Tokens
- B. Sensor Update Policy
- C. Sensor Update Throttling
- D. Channel File Update Throttling

Answer: C

Explanation:

The option that controls the speed in which your sensors will receive automatic sensor updates is Sensor Update Throttling. Sensor Update Throttling allows you to limit the number of sensors that can download a new sensor version per hour. This way, you can avoid network congestion or bandwidth issues caused by simultaneous sensor updates. You can configure the Sensor Update Throttling setting in the Sensor Update Policy for each platform.

NEW QUESTION # 232

When performing targeted filtering for a host on the Host Management Page, which filter bar attribute is NOT case-sensitive?

- A. Domain
- B. Username
- C. Model
- **D. Hostname**

Answer: D

Explanation:

When performing targeted filtering for a host on the Host Management Page, the filter bar attribute that is not case-sensitive is Hostname. The Hostname attribute allows you to filter hosts by their computer name or DNS name. The Hostname filter is not case-sensitive, meaning that it will match hosts regardless of the capitalization of their names. For example, filtering by hostname=DESKTOP-1234 will match hosts with names such as DESKTOP-1234, desktop-1234, or Desktop-12342.

NEW QUESTION # 233

An analyst is asked to retrieve an API client secret from a previously generated key. How can they achieve this?

- A. Enable the Client Secret column to reveal the API client secret
- **B. The API client secret cannot be retrieved after it has been created**
- C. Re-create the API client using the exact name to see the API client secret
- D. The API client secret can be viewed from the Edit API client pop-up box

Answer: B

Explanation:

The API client secret cannot be retrieved after it has been created. The secret is only displayed once when the API client is created, and it cannot be viewed or edited later. Therefore, it is important to save the secret securely and use it along with the client ID to authenticate the API client. The other options are either incorrect or not possible.

NEW QUESTION # 234

.....

A free trial of the product allows users to test the material before buying. These different formats allow CCFA-200b exam aspirants to practice using their preferred method. The support offered by the DumpsReview is another significant advantage for applicants. The DumpsReview CCFA-200b provides 24/7 support for guidance of users.
