# Splunk SPLK-2002 Valid Test Bootcamp, Latest SPLK-2002 Test Cram

P.S. Free & New SPLK-2002 dumps are available on Google Drive shared by ValidTorrent: https://drive.google.com/open?id=1N-X_9hQvOPqfhtF6wKX6Tr-Dz5Fvenc4

For candidates who are going to attend the exam, the pass rate is quite important. SPLK-2002 training materials of us are pass guaranteed, and if you can't pass the exam one time, we are money back guaranteed. Besides SPLK-2002 training materials are verified by skilled experts, therefore the quality and accuracy can be guaranteed, and you can use the SPLK-2002 Exam Dumps at ease. We also have online and offline chat service stuff, if any other questions, please contact us, we will give a reply to you as quickly as possible.

Difficulty in writing Splunk SPLK-2002 : Splunk Enterprise Certified Architect Exam

Many candidates appear to take the Splunk Core Certified architect Exam but could not manage to pass in their first attempt. There could be many reasons behind the failure of the candidates who try to take the Splunk SPLK-2002 exam, such as the lack of study material or lack of practice, etc. But the most important factor that causes the failure of the candidates is that they don't use the proper learning material. To pass the SPLK-2002 exam, you should use a reliable preparation source that contains complete information about the SPLK-2002 exam.Splunk Core Certified architect is the most powerful certification that candidates can have on their resumes. But for this, they will have to pass SPLK-2002 questions. SPLK-2002 is a challenging exam to pass this exam Candidates will have to work hard with the help of the right focus and preparation material passing this exam is an achievable goal. ValidTorrent help candidates by providing the most relevant and updated **splk-2002 exam dumps**. Furthermore, We also provide the SPLK-2002 Practice Test that will be much beneficial in the preparation. ValidTorrent aims to provide the best SPLK-2002 exam dumps that are verified by the Splunk experts. If Candidates feel any doubt in the **splk-2002 practice test** then our team is always there to help them. **splk-2002 exam dumps** are the perfect way to prepare SPLK-2002 exam with good grades in the just first attempt. So, Candidates want instant success in the SPLK-2002 exam with quality SPLK-2002 training material then ValidTorrent is the best option for them because our management is well trained in it and we update each question of all exams on regular basis after consulting recent updates with our Splunk certified professionals.

Latest SPLK-2002 Test Cram - SPLK-2002 Pdf Free

Though there are three different versions of our SPLK-2002 practice guide to cater to all needs of our worthy customers: the PDF, Software and APP online. I love the Software version the most. The software version of our SPLK-2002 exam questions can be used in the Windows system, which is designed by the experts from our company. The functions of the software version are very special. For example, the software version of our SPLK-2002 Learning Engine can simulate the real exam environment.

Splunk Enterprise Certified Architect Sample Questions (Q58-Q63):

NEW QUESTION # 58
Which Splunk internal index contains license-related events?

- A. _audit
- B. _license
- C. _introspection
- D. _internal

Answer: D

Explanation:
The _internal index contains license-related events, such as the license usage, the license quota, the license pool, the license stack, and the license violations. These events are logged by the license manager in the license_usage.log file, which is part of the _internal index. The _audit index contains audit events, such as user actions, configuration changes, and search activity. These events are logged by the audit trail in the audit.
log file, which is part of the _audit index. The _license index does not exist in Splunk, as the license-related events are stored in the _internal index. The _introspection index contains platform instrumentation data, such as the resource usage, the disk objects, the search activity, and the data ingestion. These data are logged by the introspection generator in various log files, such as resource_usage.log, disk_objects.log, search_activity.log, and data_ingestion.log, which are part of the _introspection index. For more information, see About Splunk Enterprise logging and [About the _internal index] in the Splunk documentation.

NEW QUESTION # 59
Which part of the deployment plan is vital prior to installing Splunk indexer clusters and search head clusters?

- A. Education and training plans.
- B. Data source inventory.
- C. Splunk deployment topology.
- D. Data policy definitions.

Answer: C

Explanation:
According to the Splunk documentation1, the Splunk deployment topology is the part of the deployment plan that is vital prior to installing Splunk indexer clusters and search head clusters. The deployment topology defines the number and type of Splunk components, such as forwarders, indexers, search heads, and deployers, that you need to install and configure for your distributed deployment. The deployment topology also determines the network and hardware requirements, the data flow and replication, the high availability and disaster recovery options, and the security and performance considerations for your deployment2. The other options are false because:
* Data source inventory is not the part of the deployment plan that is vital prior to installing Splunk indexer clusters and search head clusters, as it is a preliminary step that helps you identify the types, formats, locations, and volumes of data that you want to collect and analyze with Splunk. Data source inventory is important for planning your data ingestion and retention strategies, but it does not directly affect the installation and configuration of Splunk components3.
* Data policy definitions are not the part of the deployment plan that is vital prior to installing Splunk indexer clusters and search head clusters, as they are the rules and guidelines that govern how you handle, store, and protect your data. Data policy definitions are important for ensuring data quality, security, and compliance, but they do not directly affect the installation and configuration of Splunk components4.
* Education and training plans are not the part of the deployment plan that is vital prior to installing Splunk indexer clusters and search head clusters, as they are the learning resources and programs that help you and your team acquire the skills and knowledge to use Splunk effectively. Education and training plans are important for enhancing your Splunk proficiency and productivity, but they do not directly affect the installation and configuration of Splunk components5.

NEW QUESTION # 60
Following Splunk recommendations, where could the Monitoring Console (MC) be installed in a distributed deployment with an indexer cluster, a search head cluster, and 1000 forwarders?

- A. On a search head in the cluster.
- B. On the search head cluster deployer.
- C. On the deployment server.

- D. On a search peer in the cluster.

Answer: B

Explanation:
The Monitoring Console (MC) is the Splunk Enterprise monitoring tool that lets you view detailed topology and performance information about your Splunk Enterprise deployment1. The MC can be installed on any Splunk Enterprise instance that can access the data from all the instances in the deployment2. However, following the Splunk recommendations, the MC should be installed on the search head cluster deployer, which is a dedicated instance that manages the configuration bundle for the search head cluster members3. This way, the MC can monitor the search head cluster as well as the indexer cluster and the forwarders, without affecting the performance or availability of the other instances4. The other options are not recommended because they either introduce additional load on the existing instances (such as A and D) or do not have access to the data from the search head cluster (such as B).
1: About the Monitoring Console - Splunk Documentation 2: Add Splunk Enterprise instances to the Monitoring Console 3: Configure the deployer - Splunk Documentation 4: [Monitoring Console setup and use
- Splunk Documentation]

NEW QUESTION # 61
A Splunk architect has inherited the Splunk deployment at Buttercup Games and end users are complaining that the events are inconsistently formatted for a web sourcetype. Further investigation reveals that not all web logs flow through the same infrastructure: some of the data goes through heavy forwarders and some of the forwarders are managed by another department.
Which of the following items might be the cause for this issue?

- A. The indexers may have different configurations than the heavy forwarders.
- B. The data inputs are not properly configured across all the forwarders.
- C. The search head may have different configurations than the indexers.
- D. The forwarders managed by the other department are an older version than the rest.

Answer: A

NEW QUESTION # 62
When designing the number and size of indexes, which of the following considerations should be applied?

- A. Expected daily ingest volume, access controls, number of concurrent users
- B. Number of installed apps, expected daily ingest volume, data retention time policies
- C. Data retention time policies, number of installed apps, access controls
- D. Expected daily ingest volumes, data retention time policies, access controls

Answer: D

Explanation:
When designing the number and size of indexes, the following considerations should be applied:
* Expected daily ingest volumes: This is the amount of data that will be ingested and indexed by the Splunk platform per day. This affects the storage capacity, the indexing performance, and the license usage of the Splunk deployment. The number and size of indexes should be planned according to the expected daily ingest volumes, as well as the peak ingest volumes, to ensure that the Splunk deployment can handle the data load and meet the business requirements12.
* Data retention time policies: This is the duration for which the data will be stored and searchable by the Splunk platform. This affects the storage capacity, the data availability, and the data compliance of the Splunk deployment. The number and size of indexes should be planned according to the data retention time policies, as well as the data lifecycle, to ensure that the Splunk deployment can retain the data for the desired period and meet the legal or regulatory obligations13.
* Access controls: This is the mechanism for granting or restricting access to the data by the Splunk users or roles. This affects the data security, the data privacy, and the data governance of the Splunk deployment. The number and size of indexes should be planned according to the access controls, as well as the data sensitivity, to ensure that the Splunk deployment can protect the data from unauthorized or inappropriate access and meet the ethical or organizational standards14.
Option D is the correct answer because it reflects the most relevant and important considerations for designing the number and size of indexes. Option A is incorrect because the number of concurrent users is not a direct factor for designing the number and size of indexes, but rather a factor for designing the search head capacity and the search head clustering configuration5. Option B is incorrect because the number of installed apps is not a direct factor for designing the number and size of indexes, but rather a factor for designing the app compatibility and the app performance. Option C is incorrect because it omits the expected daily ingest

volumes, which is a crucial factor for designing the number and size of indexes.

NEW QUESTION # 63
......

For the SPLK-2002 web-based practice exam no special software installation is required. because it is a browser-based SPLK-2002 practice test. The web-based Splunk Enterprise Certified Architect practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based Splunk SPLK-2002 Practice Test. So it requires no special plugins.
